

BUSINESS NOTICES.

As the design of the CANADIAN DRUGGIST is to benefit mutually all interested in the business, we would request all parties ordering goods or making purchases of any description from houses advertising with us to mention in their letter that such advertisement was noticed in the CANADIAN DRUGGIST.

Pure Spirits.

Jos. E. Seagram, of Waterloo, Ont., offer to the trade Alcohol and Pure Spirits, also a full line of Wines, Brandies, and Whiskies. See advt.

No Cutting on these Lines.

See Archdale Wilson & Co.'s advertisement on English Toilet Soaps. Messrs. A. W. & Co. claim that W. & G.'s Transparent Soaps are greatly superior to Pears, and that they cannot be procured by cutters.

Ingulvin.

W. R. Warner & Co. desire to send to any physician a sample of this remedy wherever they have a patient resisting all other treatment for sickness in gestation, marasmus, cholera infantum, for which it has been found to be almost a specific.

The Hemming Bros. Company.

Read the half-page announcement of the Hemming Bros. Co. on second page of cover. They carry an extended line of druggists' sundries, together with their large stock of fancy goods. Be sure and see their travellers' samples.

Martin, Rosser & Co.

We would call attention to the advertisement of Martin, Rosser & Co., page 37. This firm import Strychnia very largely, and their guarantee of purity should make this year's sales in this article greater than even their enormous sale of last year.

Soda Fountains.

J. Nelson, 158 Parliament Street, Toronto, offers to the trade on page 19, a soda fountain which he claims does the work of the more expensive ones, at a very moderate cost. Drop a line to the above address if you think of purchasing a fountain this year.

Agents Wanted.

The Dominion Disinfectant Co. whose advt. appears on page 13, are desirous of appointing agents in territory not already occupied for their "Roberts' Ozonator," an article which should command a ready sale. Druggists should take hold of this and not allow it to go into other hands. Write for circulars and price list.

Golden Maltex.

Jas. Pascall, of Blackfriars Road, London, England, bring to the notice of the trade in this month's issue, their Golden Maltex, a delicious sweetmeat which has found great favor in England, and is pronounced by Dr. John Tanner as an aid to digestion. He says: "I can scarcely speak too highly of their qualities for giving power to delicate children and persons with feeble digestion." Be sure to include them in your next order to your jobber.

"You Press the Button."

Probably no pastime is becoming so generally popular, especially to the lover

of nature and art as amateur photography. Certainly to the druggist, who can (and all should) give the time to some outdoor employment. None could be more suitable, and to all such, we would suggest the purchase of a "Kodak." These cameras are made in a number of styles and at various prices, a full description of which will be mailed on application. See advt. on page 21

It Attracts Trade.

We would call attention to the advt. of the "Bells Perfumer" on page 17. This machine is now fitted for the Canadian cent, and is so simple that anyone can work it. By placing a cent in the slot and pulling the handle forward a spray of perfume is distributed on the handkerchief, which is held under the large bell. It is so adjusted that only a certain quantity of perfume is allowed to pass each time. The machines are furnished either in oak or cherry, the upper part being bronzed metal, and altogether forming an ornamental piece of furniture, while there is no doubt as to its being a profitable one. Read the advt. carefully and send an order or write for circular to the Canadian agent.

A Prosperous Concern.

Amongst the number of manufacturing centres in the United States, the city of Grand Rapids, Mich., holds a prominent place, being especially noted for its large output of furniture, carpet-sweepers, Tanglefoot, etc. In speaking of the last named article, we are informed that in one day alone, last month (March), orders for this celebrated fly-paper were received from British Columbia, Quebec, Australia, Texas, California, Louisiana, Virginia, New York, and Maine. The demand has indeed become so large that it has been found desirable to organize a Joint Stock Company, with largely increased capital, in order to supply this demand. The O. & W. Thum Co. are pleased not only with the largely increasing demand for their fly-paper in the United States, but also with the large trade which they have established in this country.

Beware.

An U. S. Court has decreed Tough on Rats to be an infringement on the Rough on Rat trademark, holding that the evident intent in changing the R to T in the word Rough was to benefit by, or through the popularity of Rough on Rats, which has been created at a large expenditure of money and enterprise, and that the similarity in the sound of the infringing title is calculated to deceive at least the illiterate public. The great majority of druggists are intelligent, honorable, upright men, but there are black sheep in every profession, who disgrace their calling. Beware when you order Rough on Rats. Examine the packages. The substituting or deceiving dealer or peddler needs watching. See that you get the genuine Rough on Rats and that Ephraim S. Wells, Jersey City, is on the label. Have suspicion of dealers and peddlers who try to substitute something else, said to be

just the same or just as good. Rough on Rats has no equal, is sold all around the world, is the most extensively advertised and is the best known and has the largest sale of any article of its kind on the face of the globe, gives satisfaction to all manner of men.

The Pork Packer in Pepsin Making.

Twenty years ago very little was known about the isolation of Pepsin and the other animal ferments, or their action. Today, much is known, although much may remain to be discovered.

One fact stands out clearly, however,—if the raw material for the preparation of these ferments is handled at the place of supply by skilled chemists, then Pepsin, and other ferments, of much greater strength are obtained, and all disagreeable taste and odor, arising from decomposition, are avoided. The great packing firm of Armour & Company, Chicago, were the first to realize the advantage which freshness of material and early manipulation would give them over other Pepsin manufacturers who buy material in Chicago and transport it by freight to their laboratories.

By the aid of expert chemical talent, Armour & Company utilize their vast supply of raw material almost as soon as removed from the animal, the result being a line of digestive ferments unequalled by any in the market. "The Pork Packer in Pepsin Making" marks a step in the march of progress, and is an indication of great import in the field of physiological chemistry.

Bromo Soda.

On account of my happy experiences with Bromo Soda in the case of my daughter—who, by the way, has Incipient Phthisis—and as every true physician should, when a remedial agent of undoubted value is put into his hands, I feel it incumbent on me to make known its therapeutic value. For a length of time my daughter had suffered most excruciating pain from headache, accompanied with most debilitating nausea. Remedy after remedy was prescribed without accomplishing more than a negative result, until we almost despaired of affording her any permanent relief. My attention about a year or a little less ago, in England, was called to Bromo Soda as being likely to afford relief. Some of it was obtained from F. Newbery & Sons, 1 King Edward Street, London, E. C. Moderate doses at first were exhibited to see how the irritable stomach would receive it. Finding that it did not disagree, the dose was gradually increased till the urgent symptoms began to subside, and it affords me great pleasure to inform you, that after three months' persistent use of the Bromo Soda, I feel assured that she is permanently rid of the two difficulties already referred to, and her general condition better than for several years.

Its gentle, at the same time, powerful sedative action certainly places it in the front rank of the remedies controlling the action of the Pneumogastric Nerve, and
