Intergovernmental Panel on Climate Change (IPCC) and look forward to the release of its full report in August. The Second World Climate Conference provides the opportunity for all countries to consider the adoption of strategies and measures for limiting or stabilizing greenhouse gas emissions, and to discuss an effective international response. We reiterate our support for the negotiation of a framework convention on climate change, under the auspices of the United Nations Environment Program (UNEP) and the World Meteorological Organization (WMO). The convention should be completed by 1992. Work on appropriate implementing protocols should be undertaken as expeditiously as possible and should consider all sources and sinks.

64. We welcome the amendment of the Montreal Protocol to phase out the use of chlorofluorocarbons (CFCs) by the year 2000 and to extend coverage of the Protocol to other ozone depleting substances. The establishment of a financial mechanism to assist developing countries to tackle ozone depletion marks a new and positive step in cooperation between the developed and developing worlds. We applaud the announcement in London by some major developing countries, including India and China, that they intend to review their position on adherence to the Montreal Protocol and its amendments. We would welcome their adherence as a crucial reinforcement of the effectiveness of the Protocol, which would ultimately lead to a worldwide phase out of ozone depleting substances. We urge all parties to ratify the amended Protocol as quickly as possible.

65. We acknowledge that enhanced levels of cooperation will be necessary with regard to the science and impacts of climate change and economic implications of possible response strategies. We recognize the importance of working together to develop new technologies and methods over the coming decades to complement energy conservation and other measures to reduce carbon dioxide and other greenhouse emissions. We support accelerated scientific and economic research and analysis on the dynamics and potential impact of climate change, and on potential responses of developed and developing countries.

66. We are determined to take action to increase forests, while protecting existing ones and recognizing the sovereign rights of all countries to make use of their natural resources. The destruction of tropical forests has reached alarming proportions. We welcome the commitment of the new Government of Brazil to help arrest this destruction and to provide sustainable forest management. We actively support this process, and we are ready for a new dialogue with developing countries on ways and means to support their efforts. We are ready to cooperate with the
