Export Contact: Mr. Todd Degelman, Marketing Manager

Marketing Profile

Conservation Energy Systems was established in 1981 by Richard Olmstead and Dick vanEE of Saskatoon, Saskatchewan. CES is a subsidiary of Venmar Ventillation of Drummondville, Quebec.

For over 10 years CES has been leading the way in improved air quality in residential, commercial, institutional and industrial applications. With the addition of vanEE Heat Recovery Ventillation Systems indoor environments are kept naturally fresh year round, automatically. Air pollutants caused by building materials, cleaning products, lingering odours, and excess moisture are kept under control ensuring fresher, healthier indoor environments. With the added benefit of heat recovery energy savings and comfort levels can be substantially improved.

VanEE products are supported through a technical assistance network of skilled representatives who can answer any questions on ventillation system design, installation and service.
