

Opportunities in Alberta

General Information

AGRICULTURAL SCHOOLS. The Provincial Government has established Agricultural Schools at Claresholm, Olds and Vermilion. These were opened in October, 1918, the first year's work being attended by signal success. A two-years' course is given at these, and it is proposed that a central Agricultural College shall be established later, where higher instruction will be given and a degree conferred. No entrance examination is necessary and no fees are charged.

AREA. The province comprises the old territorial districts of Alberta and the western part of the district of Athabasca. It was created a province in 1905. From north to south it is 750 miles long and at its widest part about 400 miles wide. The total area is 253,540 sq. miles, as compared with Great Britain and Ireland, 121,377; France, 207,220; Germany, 208,850; Austria-Hungary, 241,433; New England States, U.S.A., 165,745.

AREA CULTIVATED. The province contains 100,000,000 acres of cultivable land, of which only about 3,000,000 are actually under crop.

CLIMATE. There is one common flora requiring a high summer temperature from U.S. boundary to Lake Athabasca, i.e., the Northern Districts are in the same class for grain culture as the country near Winnipeg, Regina, or Calgary. The chief factors of the Alberta climate are:

CHINOOK WINDS. Warm winds blowing from the mountains, though more common in the South, occur along the whole range of the Rockies. They have been known to cause a rise in temperature of 60 degrees in a few hours.

IOTHERMAL LINES. On the east the isothermal lines turn northward from the west coast of Hudson's Bay. On the west they turn north from the Gulf of California, cross the Rockies at the s.w. corner of Alberta, meeting the eastward currents about the Hand Hills.

ALTITUDE. South of the U.S. boundary is a plateau 500,000 sq. miles at 6,000 ft. above sea level, falling at the boundary to 4,000 ft. and 700 miles farther north to 1,000 ft.
