

LETHBRIDGE CONFERENCE ON MORE AND BETTER WATER SUPPLY

he would use only a few days and which would stand idle the rest of the year, and would not pay the same to instal a home waterworks system and conveniences which would be used 365 days in the year and enjoyed by every member of the family. There are many ways by which the water can be placed on tap in the house. The windmill or the gas engine will

pump it to either an overhead tank or to a pneumatic tank located anywhere on the premises.

There are two requirements necessary on every farm or in every home, one for work and one for living. Too often the equipment for work receives the major portion of attention. Why should we not put first things first?
