BURNELL'S

FOUR-POINTED GALVANIZED STEEL BARB WIRE FENCING

There are now before the public a number of Four-Pointed Barbs, which to the casual observer, are of a similar appearance to the Burnell Barb which we are manufacturing. A close examination of them will show the difference and the inferiority.

The Grand Trunk Railway Company of Canada give a preference over all others, and have contracted with us for over one hundred tons of fencing for immediate delivery.

This Barb was patented in the United States in 1873, and is no infringement on any other patent, and we will defend our dealers and consumers against the threats of patent monopolists. We claim superiority for our Barb Wire over all others, for the following reasons:

1st.—We use only the best quality of Galvanized Annealed Steel Wire.
2nd.—The two strands of No. 12 Wire are twisted together just enough to allow for the contraction and expansion of the metal, caused by heat and cold, and not so much as to injure the structure of the steel.

3rd.—The Barbs on our Wire are four-pointed, and always presenting a barb laterally or at a right angle, which is a great advantage over the Two-Pointed Wire, as cattle are unable to get against the fence to break it or push it loose.

4th.—The Barbs are fastened to the Wire at intervals of 7 inches, in a manner entirely different from any other, being securely locked around and between both wires, so that they cannot slip or move toward each other, and they also prevent the untwisting of the cable should either wire be broken.

5th.—The machinery by which the Barbs are put on is perfect, so that the Cable Wire is not injured or weakened by the process, as is the case with other Four-Pointed Barbs.

Manufactured by the **CANADA WIRE COMPANY**, Montreal.

THE TUPPER GRATE BAR.

Thoroughly tested and approved. One set will cut several of any other kind, and save a large percentage of fuel. For steamboats, stationary boilers, etc.

H. R. IVES, Manager
