grounds. Springs should always be carefully loca ed, and if space permits, a note stating whether they are permanent or not may boudded. If there is a poor spot of miles from Buffalo. This time we give a draw the boundary lines. If the farm is near as possible, Buildings may foliow bird's eye view of the farm itself. The irregular, the location of the lines may be next in the order of location, with the usual and most famous stock farms of the United a stream of water or any like irregular body different varieties of fruit, should be placed States, and its owners among the most noted stockmen of the age. We found them ready be located by measuring offsets from a base to extend a very hearty welcome to the line. Having a plat of the farm, it now fixing the kind of fruit when a tree begins becomes necessary to cate the position of the bear, especially with those that are not coming into market as soon as threshed.

The dre summer in Varieties of trans, should be placed on the map, and whenever a tree is added it may be noted. This saves trouble in fixing the kind of fruit when a tree begins large amount of wheat and other grain is coming into market as soon as threshed.

The dre summer in Varieties of the farm that the same day of the farm that the same day.

A Little Late

This issue of the I ARMER is a little late, lowing to a great rush of work and the abground in a field, outline it with pencil as sence of some of our type-setting staff. We give our promise that it will not occur again, as we know our readers are extremely yards, etc. Orchards in all cases, with the diffusion when they do not receive the diffusion varieties of finite should be placed FARMER.

borses and cattle owned at Jewett Stock Farm are too well known to need any commendation from us; but every reader of the FARMER who visits Buffalo should go out to East Aurora and visit the farm. He will receive a hearty welcome at the hunds of its proprietors and learn much from his visit.

Farm Engineering.

The first requisite of a farm map is the boundary. Determine the scale on which the map is to be drawn. This must be regulated by the character of the map. If it is

visitors at any time. The magnificent are worthy or a place, such as fields, swamps, creeks, buildings, etc. Begin with signs. the location of fields on the outside of the farm. Continue the location till all are in their proper position. The interior work will be comparatively easy, as data can be had on every side. The location of water courses may follow. The most expeditious way will be to note where they pass from one field to anothes. Even if there is drainage only during wet weather, the position of the water course ought to be noted, either by a single fine line or by a double letter it with reference to a note. -Ohio to be a permanent map, showing all the row of light hatching facing the lowest Farmer.

A board fence may be a double dotted line. But in general, the signs used for various objects are too numerous and arbitrary to be used on a farm map.

Unless a very claborate map is to be made, no attempt at topography should be undertaken, as it confuses the rest of the work. The representation of natural features depends largely upon the natural ability of the executor for their beauty, but is practice it is better to only indicate the object and then

Fences may be designated by different, early marketing of wheat; but a further reason is to be found in the fact that a series of bud harvests with low prices have made farmers poor and compelled early selling. It seems paradoxical, but is none the less a fact, that in some cases the lower grain or other produce is seiling, the more ready farmers are to sell. They are like the story told of the German's wife who had recently died. Some one asked the bereaved husband if his wife was resigned to die, and his response was, "Mion Got, she have to be."
