Brake Squeaks.

Brake squeaks are a sourse of great annoyance, and if the brake linings do not receive attention the squeaking is liable to become chronic. Squeaking is generally due to dirt or grit which has become imbedded in brakes are operated. Usually, a stiff brushing with kerosene oil will remove the grit. When the grit, however is so deeply imbedded as to resist all ordinary methods to remove it, a mixture of powdered rosin and castor oil, applied to the brake bands, will remedy the situation. When the noise is caused by rivets bearing against the brake drum. the only cure is the insertion of new rivets, sinking the heads worn as to expose the rivet heads, (which had been properly inserted) new brake lining should be installed.
