

THE CANADIAN LIVE-STOCK AND FARM JOURNAL

DEVOTED TO THE INTERESTS OF THE STOCK-RAISERS AND FARMERS OF CANADA.

VOL. V.

HAMILTON, CANADA, NOVEMBER, 1888.

No. 61

A NOTED JERSEY FAMILY.

Bred by and the property of Mr. W. A. Reburn, St. Anne de Bellevue, Que.

St Anne's Jersey Group.

When the first gathering of the leading citizens of famous Jersey isle took place in the early part of this century, with the avowed object of improving their cattle, and to "preserve a trade that had hitherto been of so much profit to the island," little did they think of the grand proportions that this trade would attain, and much less did they conceive of Canada, with a climate so much at variance with that of the Channel Isles, having within her precincts such a group as those of Mr. W. A. Reburn's, of St. Anne de Bellevue, which we now present to our readers.

Jolie of St. Lambert (appearing in the lower corner on the left side) was bred by Mr. Romeo H. Stephens, of Lambert, P. Q. She was sired by Lord Lisgar 1066, a son of the famous Victor Hugo. She has now five living daughters, four of which are at present giving an average of over 42 lbs. of milk per day. As may be inferred, she is a cow of immense capacity and great appetite, with an udder that measured this spring just before calving, 73 inches in circumference. A perfect network of milk veins, tortuous and voluminous, in conjunction with many

other qualifications upborne by her performance and pedigree, forces the conclusion that few dairy cows her equal exist at the present day.

On the upper corner opposite is a fine sketch of Jolie of St. Lambert 2d. She has $87\frac{1}{2}\%$ of the blood of Mary Anne of St. Lambert, being sired by Stoke Pogis 3d. More is given of this valuable animal in the description of the herd.

Jolie of St. Lambert 3d, appearing just below Jolie 2d, was dropped March, 1883. She was sired by Lord Banst 11110, a grandson of Buffer, the grand sire of Mary Anne of S. Lambert. This cow has proven herself worthy of her ancestral ties, as her record in the show-ring, given on another page, will testify.

The sketch of Jolie of St. Lambert 4th 38366, winner of the first prize as best two-year-old at Quebec in 1887, figures in the left hand upper corner. Having only dropped a calf the 13th September, she was prevented from contributing her share to the long list of honors achieved by the herd at the fall exhibitions. She is a full sister to Lord Lisgar of St. Annes, and she resembles her dam more than any of the others.

Lord Lisgar of St. Anne's 17792 was dropped May 23d, 1885. His sire, Orloff's Stoke Pogis 11157 is a son of Orloff 3143, a son of Lord Lisgar and Ophelia, in.p. Orloff has many daughters with good records, among which may be mentioned Lisgar's Etta, 16 lbs. 14 oz. per week, and Carrie Pogis, 15 lbs. 14oz. per week. Ophelia in turn is dam of Maggie of St. Lambert, the latter having a record of 16 lbs. 3 oz. per week. Lord Lisgar of St. Anne's is standard bred, his dam and his sire's dam having an average test of 18 lbs. $2\frac{3}{4}$ oz. of butter in 7 days.

We refer our readers to an inner page for a detailed account of the rest of this noted herd.

"I like your paper very well, and would not like to be without it, so please send it on." John Kerr, Red Hall, Wigton, England.

"I find a file of your journal so valuable for reference, that I would be obliged if you would send me the April, July and August numbers, as they never came to hand,"—W. W. Hubbard Oromocto, N.B.

"I am still well pleased with the JOURNAL, and think no breeder of any account should be without it."—A. C. Hallman & Co., New Dundee, Ont.
