

Our Celebrated
Rotary Cutting Veneer Machines

made in over sixty sizes, have stood the test and proved equal to any proposition to reduce logs into thin lumber and veneers.

The product is high grade.
 The output is great.
 The cost of operating and maintenance is reduced to a minimum.
 Quite a combination, is it not?

Timber and mill owners should get in early.
 Buy a Coe Veneer Cutting and Drying outfit and prepare to
 supply thin lumber and veneers which have a healthy growing
 demand. More money in it than sawing your logs into lumber.
