West Steadily Advancing.

Beershaba is still an outpost of civilization against Belonin tribes its commercial importance is increasing rapidly, owing to waterworks which draw their supply from seven wells mentioned in Genesis. That the history East is gradually succumbing, however, to the progressive spirit of the West is indicated by the fact that a pumping plant has been erected over Abraham's well. When the railway system now under way has been completed, it will be possible to run trains from Paris to Damascus, Jerusalem, and Mecca itself.

Panama's Terraced Lawns.

By the time the Panama canal is opened the ships may sail through terraced green lawns instead of the bare yellow earth slopes now in evidence. The reason is not altogether an aesthetic one, though the attraction of sailing on a big ocean liner through such a scene might well induce a few extra passengers to take the trip, just as the run up to Santos or the entrance to the Rio de Janeiro harbor is sufficient excuse for a voyage from Europe.

It is believed that sowing the sloping sides of the canal through the cuts with a strong grass may prevent the slides now so frequent, and will reduce the wearing down by the tropical rains. H. Pittier, an expert botanist from the Smithsonian institution, has charge of an attempt to test his theory, for which purpose the agricultural department at

Washington has sent down several thousand pounds of grass seed.

Even though it be impossible to prevent entirely the occasional big slides, it seems almost possible that the measure will result in a great saving by holding the ground from starting except under great pressure, and by reducing the erosion, which brings down a tremendous amount of earth in the course of the year.

You Breathe It.

By the simple act of breathing we inhale life and death. You breathe air crowded with disease germs. These lodge in the membrane and at once commence their deadly work. In a night you develop a cold and before long you are in the grip of Canada's deadliest enemy—Catarrh.

You also breathe Hyomei (pronounced High-o-mei) and by so doing breathe in life—Hyomei is medicated and vaporized air. In its journey through the breathing organs it arrests and kills catarrh and cold germs soothes the inflamed membrane and commences the work of healing. Ask druggist J. Sutton Clark what he knows about Hyomei. You will find that he not only sells it but guarantees it. A complete outfit will cost you \$1.00 from your druggist or postpaid from the R. T. Booth Co. Ltd., Fort Erie, Ont. You will find it invaluable for coughs, colds, catarrh and all kindred diseases. Money refunded if it fails.

THE CARE OF LAMPS

In places where electric light or gas are not available if lamps be good and have proper attention, one cannot wish for a more satisfactory light, but if badly cared for they will be a source of much discomfort. The great secret of having lamps in good working order is to keep them clean and to use good oil. Have a regular place and time for trimming the lamps. Put a folded newspaper on the table so that any stray bits of burned wick and drops of oil may fall upon it. Wash and wipe the chimneys and shades. Now take off all loose parts of the burner, washing them in hot soap-suds and wiping with a clean soft cloth. Trim the wicks and turn them quite low. With a soft, wet cloth, well soaped, wipe the burner thoroughly, working the cloth as much as possible inside the burner, to get off every particle of the charred wick. Now fill the lamps within about one inch of the top, and wipe with a damp towel and then a dry one. Adjust all the parts and return them to their proper places. Whenever a new wick is required in a lamp wash and scald the burner before putting in the wick. With a student lamp, the receptacle for waste oil, which is screwed on the bottom of the burner, should be taken off at least once a week and washed. Sometimes a wick will get very dark and dirty before it is half consumed. It is not economy to try to burn it; replace it with a fresh one. The trouble and expense are slight and the increase in clearness and brilliancy will repay the extra care. When a lamp is lighted it should not at once be turned up to the full height; wait until the chimney is heated. Beautiful shades are often cracked or broken by having hot chimneys rest against them. Now, when lighting a lamp be careful that the chimney is set perfectly straight and does not touch the shade at any point. The shade should be placed on the lamp as soon as it is lighted, that it may heat gradually.

Utilizing Waste as Fuel.

The greatest work which has been carried on by the British in Egypt, since their occupation of that country has been the construction of dams along the Nile for the purpose of providing water for irrigating the Nile Valley. As a result of this work vast areas of previously waste, have been brought under cultivation and the output of the country vastly increased. Another enterprise of little less importance, is now under way. This is for the purpose of utilizing and, a thick tangle of water plants in the Nile bed. This growth has for generations seriously interfered with the navigation of the Nile. It has recently been discovered that it can be utilized as a fuel. The new fuel is known as siddite.
