# Dr. Brehm's Report.

(Copy.) Department of Public Health,

January 21st, 1911. Dear Sir - In reply to your letter of the 18th inst., asking for a report on the outbreak of typhus fever in Pope's Lane and vicinity, I beg to submit the following for the information of the Council.

1.—The Cause of the Outhreak. It is now generally held that typhus

fever is, in all probability, caused, like other infectious diseases, by a Whalen, who died on the 4th, and special germ or microbe. This germ George Chicks, on the 16th inst. The has not yet been discovered, however, first three patients have quite recovand, as in the case of the present outbreak, the disease sometimes makes well. its appearance in very insanitary places without being traceable to any pre-existing cause. Typhus is at the present time a very rare disease, and direct, or indirect, with these. On ontbreaks occur only in the presence the 24th December Mrs. Whalen, a of dirt, overcrowding and poverty, relative of the Collins family, applied and in unhealthy dwellings. In the at the Halth Office for relief for these Pope's Lane houses all these conditions were present in a very marked a destitute condition, but were being degree. As there had previously been no case of typhus in the city during the past nieteen years, the only discoverable cause of this outbreak is Public Charities. The cases were not the condition of dirt and squalor in reported as being infectious, but on which the families first affected were the 26th were sent to Signal Hill living. I have investigated a rumor Hospital on account of the condition to the effect that the disease was of poverty and helplessness in which brought to Pope Street by a fisherman named Rogers, and am satisfied that this report is quite unfounded. physician to the hospital on the 27th.

2.-History of the Outbreak. The number of known cases up to the present date is 13, and the names apparently of an infectious nature and dates when they were reported but as the history and symptoms of and admitted to hospital are as fol- all the cases were very vague and in-

facts felating to the matter which patients is slight. and medicine for the sick poor, but sibly be of an infectious nature, visited the house an hour later. found that Joseph Collins, who had been ill only four or five days, had had an attack of bronchitis; he was then recovering and had no sign or symptoms of fever of any kind. Mrs. Collins was also ill, and on examination I found that she was suffering rom a bad attack of pleuro-pneumonia and was too weak to be removed hospital. There was no symptoms of typhus or other fever. The family appeared to be in destitute circum stances, and I reported the case to the officers of the St. Vincent d Paul Society, who sent some assist ance at once. I again examined and prescribed for Mrs. Collins on Mon day, and instructed her sister to inform me, or to get a district doctor if there was no improvement. I re ceived no further message, but heard few days later that Mrs. Collins had died. I have since learned that she was visited by another medical was due to pneumonia. I heard nothing more of the family until Dec. 24th, as stated above. Two days after he hospital I was informed that their grandmother, a Mrs. Reardon, aged 83, had died after an illness of only two days. I had no previous ledge of this case, but the short ration of the illness, is, if correcty stated, not consistent with the suposition of typhus. I saw and ex-
