

IMPORTED CLYDES.
The Clydesdale Association have done a wise thing in raising the standard whereby imported fillies can be recorded in the Canadian records. It is a far-reaching innovation, and every opportunity ought to be given to the Canadian farmers to have their animals recorded before it is too late.

So many poor animals have been coming into Canada that the Clydesdale breed stands to be seriously injured by the big-legged, round-boned, sloppy mares imported in some instances, that it is a duty the association owes to the country to see that the quality and standard is steadily improved.

Importers and breeders of well-known repute do not, as a rule, risk their reputation with a poor animal, but others who see a commercial catch-penny in a hurried importation and sale, have perhaps not been as careful in the selection as they otherwise would have been. Big prices have a tendency to carelessness of selection, and to the downward tendency of quality, while, on the contrary, poor prices like those at present prevailing in the Shorthorn world tend to raise the standard and to produce the best.

All owners of imported fillies will do well to look at their pedigrees, and if there is only one numbered dam, to take steps to get into the Canadian books at once.

IMPORTED CLYDE FILLIES MUST HAVE PEDIGREES

Fillies Without Two Registered Dams Cannot Register in Canada After June.

After June 1 the importers of Clyde fillies will have to see to it that their selections are made with more care being taken as to pedigrees. The Clydesdale Association decided at a recent meeting of the executive to stop the influx of poor Clyde mares that have been coming to Canada.

Farmers who have been attending the sales of imported fillies at the different stables in Ontario have been struck with the poor quality of many of the animals offered. In a great many cases the fillies have not been as good as the Canadian breeding, and the presence of paper has been the only inducement to buy. But this paper furnished a very sorry tale in many cases. Fillies with only one registered dam, and others with no recorded dams. Such evidence of looseness among the fillies of the old had the effect of leading a number of poor imported mares into this country, until the business has been hurt and the Canadian standard seriously affected. Consequently the breeders have been taking steps to remedy the situation, and a new requirement has been made for the registration of fillies imported from England and Scotland. After June 1 all fillies imported from Scotland shall be given a chance to come into the Canadian National Records on the present terms, but after that date no fillies will be admitted that have not two registered dams. This means that a large number of fillies imported and sold to Ontario farmers will not be eligible for registration in the Canadian records after June 1 if it is not done before. This will make the importers more careful in their purchases in the old land, and the arriving at pedigrees of the offspring more easily.

O.A.C. DAIRY SCHOOL.

Results of the Term's Work is Most Encouraging.

From College.
The term which closed March 22 was one of the most successful in the history of the Dairy School. There was a larger proportion of those registering who took the final examinations than has been the case in any one year heretofore. The results in proficiency list only are given for the factory, specialists in butter-making, and 2-gram dairy classes. Students are ranked according to general standing in both practical and written examinations. Those students having a star will be required to pass a supplementary examination before they may receive their certificates.

Factory Class.

WORLD'S FARM CALENDAR.
W. B. Butler's sale of imported Clyde fillies at Woodstock, April 12.

FARMERS ARE ASSISTED TO FIGHT ORCHARD EVILS

Ontario Government Making Grants to Groups of Farmers—A Move in Right Direction.

The minister of agriculture for Ontario has, for the past two years, had under consideration plans for further assisting the fruit growers of the province. Spraying has now become, in producing a superior grade of fruit, the most important operation of the year, and while widely practised in certain sections, has not yet been given the attention that it requires in the apple sections. The advent of the power sprayer is of such recent date that the advantages it gives, especially in the spraying of apple orchards, are not yet appreciated.

For many years the department of agriculture has been advocating more and better spraying. Demonstrations in the use of hand and power outfits, and the preparation and application of the most effective mixtures have been given throughout the province with satisfactory results. It is now felt that such information has been sufficiently diffused, and another step forward is proposed.

The Provincial Fruit Growers' Association has within the past three years assisted in organizing a large number of fruit-growing associations. One of the aims of these associations has been the co-operative spraying of orchards of their members, and it is now proposed to assist these and kindred organizations in such spraying work. With this aim in view, the minister of agriculture has asked the legislature for a grant of \$50,000 to be devoted to the assistance of fruit growers in the purchase and operation of power-spraying outfits. Many associations already own and are operating such machines, and these will receive the same aid as those organizing during 1907. The conditions under which the grants are available have been made as simple as possible, with the hope that a decided stimulus will be given to the proper spraying of orchards during this and coming seasons. Following are the regulations covering the payment of the grants:

A grant of \$50 will be made to any five or more farmers who unite to form a fruit growers' association, for the purchase and operation of a power-spraying outfit during the season of 1907. The association must be incorporated to qualify for this grant, the incorporation of co-operative associations should be obtained in the full benefits of co-operations are desired. Co-operative fruit growing associations owning and operating two or more power sprayers will be given a grant for each machine operated. The number of such associations receiving assistance during the present year shall not exceed 100. At least 25 acres of fruit trees must be thoroughly sprayed during the proper season of the year. A reasonable portion of such spraying must be done on the farms or orchards of each of the parties forming the association. Such associations before receiving any portion of the grant shall satisfy an inspector of the department of agriculture that the above conditions have been complied with, and shall make such reports as shall satisfy the minister. Associations desirous of participating in this grant must apply to the department not later than the first day of May.

WANT SCHOOLBOY MARKSMEN

London Couple Will Entertain Four Members of Cadet Corps.

A lady and gentleman in London, England, have offered to entertain four Canadian school boys, aged 12 or 13, sons of working class parents, who are members of cadet corps. This is the year of the second international school of hygiene congress and the presence thereof of four colonial school boys would be, they write, of great interest. Also the "Boys' Blesley" is in August, and they could come as the guests of one of the city elementary schools, to that Blesley camp training. Any high public school boards who have members of cadet corps who would desire to take advantage of this offer, should send names to the deputy minister of education, Toronto.

Canning Factory for Woodstock.
Woodstock, April 8.—(Special.)—One of the best of the new canning factories to be built in Western Ontario will probably be erected in Woodstock. Messrs. Koenigsley, Hole and Allan of London, who had a conference with the board of trade and industrial committee of the council. It is likely the committee will recommend the submission of a bylaw for a loan of \$15,000. The factory would employ an average of 15 hands.

Fire at Midland.
Midland, April 8.—The plant of the Georgian Bay Engineering Co. has been destroyed by fire.

MONEY WELL SPENT.

The World is glad to receive the following letter from a satisfied man in Fenelon Falls.
We advertised a sale, and gave a good report of the same in our issues last week and for this the owner writes—
Fenelon Falls, April 5, '07
The Agricultural Editor, World, Toronto, Ont.
Sir,—Enclosed herewith find in settlement of account and tally looked after the work in good shape and accept my best thanks, as well as the pay. Wishing you every success,
Yours very truly,
FINDLAY McDUGALL.

THE FARMSTEAD

April showers!
Hepatitis and arthritis.

Why not plant gladioli and dahlias?
See Riverview ad. on this page for flowers and bulbs.

Register that imported Clyde filly in the Canadian books now.

Now for the spring seeding. It will pay to do a lot of thinking now, rather than cussing in harvest.

Sales of horses are taking place all over the country at good figures. A colt is a little more to the farmer nowadays.

The government are going to help the farmers spray their apple trees. The apple crop has been neglected.

The World has advertised a large number of successful auction sales this year, and good reports have come from many a satisfied man.

The sugar-beet growers are signing again in some districts. The way some factories acted last year with the farmers will, and ought to, curtail their acreage this year.

Fred Richardson of Columbus states that the Clydesdale outlook is most bright at present.

He thinks the outlook for a big business this summer is more encouraging than for years.

Why not try a few acres of alfalfa on that well-drained field of yours? The feed, when obtained, is the best value a farmer can raise.

The farmer who seeds down to clover each year is the man who is reaping the great benefits to his soil. Soil means wealth.

Sunshine is as necessary to the little pig now on the farm as a government license is to the blind pig in the village.

Everything may come to him who waits, but the one who hustles will be early bringing himself to what he wants in less time.

Fence the barnyard in so you do not have to spend the time you might be resting in running horses and cattle around the neighborhood.

The best varieties of fruit to grow are those which sell best, even if they don't just suit your palate.

Read W. E. Butler's advertisement in this issue for April 16 at Woodstock. He has some choice Clyde fillies for sale. See advertisement.

Fred Silverides, the popular Uxbridge auctioneer, has accepted the general agency of the Frost and Wood Co., for Central Ontario. We are glad that he has decided not to quit the auctioneer's work, where he has been so successful this last year.

Aged sows are preferable for rearing good strong piglets. Good success may be had by some men with all ages of sows, but aged sows are the best for producing young of hardy constitutions. The care of the sow with the feed given has much to do with the success of the new-born litter.

Westley Bros. of Pickering, who own a good flock of Oxford Down sheep, report that the lambing season has been most successful. They report, for success this year, but that more singles have occurred this year than formerly. The Oxford sheep is a pretty animal, good mothers and easily kept.

Donlands Farm has purchased a few Yorkshire White sows recently from Ontario County. These sows are generally kind breeders of large litters. The improved Yorkshires have made a name for themselves in Canada, and their good qualities will likely continue that favoritism for long years to come.

W. L. Courtois of Pickering, who advertises poultry for sale, in our classified advertisements, reports that he is filling numerous orders from parties who have seen his ad. in The World. Poultry are money makers on the farm, and too much care cannot be exercised in keeping the henhouse well supplied with good layers.

Farm fences will do well to read the ad. appearing on the Farm Pages of The World. Fencing has to be done by every farmer in Ontario, either little or much, this spring, and a fence that will last is the fence that is made. The putting in of the posts and the stretching of the wire are the important points.

W. J. Devitt of Greenwood reports that his Cotswold sheep are doing well and coming out in good shape. Will also has some good words to say about The World recently. He is glad to see attention being paid to the farmers and their work by the daily newspaper. This page is always read with a great deal of interest by the farmers.

CREVE COEUR HENS.

Dubois, Toronto, writes: Would you kindly give me the address of people keeping some Creve Coeur hens in Ontario, as I want to get a setting of eggs?

Ans.—We are not at present aware of any parties near Toronto who breed this fowl. Perhaps our readers can give the information.

ELECTRO-CHEMICAL

Rheumatic Rings

Are Guaranteed to Cure Rheumatism and Gout. A Female Doctor arising from the fact that the Electro-Chemical Ring is not an ignorant charm or faith cure, but a scientific method of treating the disease. The secret, the power, the merit in this ring lies in the combination of the various metals of the ring is made. No matter what the trouble is, if it is caused by excess of acid in the blood, or if it is caused by a rheumatic cure. Looks just like any other ring, can be worn day and night. We guarantee these rings to do all we claim, or will refund the money. Send size of finger when ordering. Mailed to any address on receipt of \$1.00.

309, QUEEN & VICTORIA STS., TORONTO, CAN.

TORONTO HORSE MARKET WORKERS ONLY IN DEMAND

Situation Generally Hardly Up to Expectations—Few Enquiries for Quality.

No important sales of high-class horses were reported during the past week in Toronto, except at The Repository, Simcoe-street, Messrs. Burns and Sheppard selling a couple of carriage pairs and several high-stepping singles at good but by no means exorbitant prices. Other dealers report matters rather quiet, due, they are inclined to think, to some extent to the flurry in stocks, which has kept men's minds off horses and rigidly on business. The dealers, however, are busy with the things up for the approaching horse show, and they predict a large and good entry in pretty well all classes.

Locally the demand is almost entirely for work horses, which are selling generally at good average, but not phenomenal prices. The truth is that expectations are hardly being realized, the demand from the Northwest being somewhat lessening. The result is that dealers are complaining bitterly of the extremely small margin between prices on the farm and in the city. In fact several lots have been sold at a loss. A few weeks ago it looked as if we were in for a boom during the past week there was a very apparent lull and more than the usual number of horses were left over. A few good drivers and carriage horses brought fair prices, but there was no keenness apparent for their possession, while for extra quality there was no sufficient money forthcoming. What demand there was was all for draughters, expressers and heavy delivery horses, but even these were not in great demand. In fact the market during the past week showed a tendency to weakness and was hardly up to the average of the corresponding week last year.

Messrs. Burns & Sheppard report the following as the prevailing prices: Single roadsters, 15 to 16 hands, \$150 to \$175. Single colts, 15 to 16 hands, 150 to 180. Matched pairs, carriage horses, 15 to 16 hands, 300 to 500. Delivery horses, 12 to 14 hands, 1200 lbs., 150 to 165. General purpose and express horses, 1200 to 1350, 165 to 170. Draught horses, 1500 to 1750 lbs., 180 to 220. Heavy delivery horses, 1400 to 1600 lbs., 100 to 110. Serviceable second-hand drivers, 50 to 90.

This week the shipments in are expected to be very large, with some good animals among the number. At The Repository, Simcoe-street, 350 of all sorts will be offered, and at The Exchange, Jarvis-street, 175.

One notices with interest that in Australia to-day the critics who pose as authorities on horse raising have divided in their opinions as to whether crushed oats are not better than whole oats. The reason for this is that they are more thoroughly digested than whole oats, remarks The London Livestock Journal. This, however, is not the reason which mainly influences the farmer. He finds that when his horse-fed is crushed the germinating power of the whole oats which may be mixed with it is destroyed, and thus his paddocks are kept in a state of sterility. The reason is that the crushing of oats is a matter of fact the crushing of oats does not increase or promote their digestibility. The teeth of horses possess great grinding or crushing powers, and a horse whose teeth are in a normal condition is perfectly well able to chew or masticate whole oats in a thorax and complete manner. Crushed oats require less grinding on the part of the horse, and the former are therefore more suitable than the latter for feeding to animals that are troubled with their teeth. Men with long experience of horses generally hold the faith that crushed oats are not so suitable as whole oats. For this reason, they are required to be in hard condition and to do work at a fast pace.

The average racehorse stallions of 1700 did not reach 15 hands. One authority has fixed the average height of racehorses at 14 hands in 1700; at 15 h. 3 in. in 1800; and at 15 h. 2-1/2 in. in 1900.

The Winnipeg industrial exhibition proposes this year to give \$7500 for trotting and pacing races and \$3300 for running races. The premiums for Clydes and Shires have been considerably increased. Classes are given for Percherons, Suffolk and Belgians, breeds that have no representation at Toronto. The pony classes have been added. Prizes are also to be given for the best five heavy horses owned by one exhibitor and the best ten heavy horses owned in any one province.

Nine mares and two stallions will be used to start the Morgan horse experiment station at Waybridge, made possible by the gift to the United States department of agriculture by Joseph Battell, the well-known Vermont horseman, of a large farm near the town for that purpose.

From Kentucky William Shields has received word that his mare The Rogue has foaled a colt, filly by Advance Guard. The Rogue is a full sister to the Lazzarone mare Geranium. She was bred to Advance Guard in 1903. The foal was born before Francis R. Hitchcock purchased the Great Tom stallion and presented him to the Joe Fry Club's Breeding Bureau for service in New York State.

New York advises say: "Between the slump in stocks and the speculation for automobiles something of a set-back has been given to certain branches of the horse business this spring, as to every other line of trade in which luxuries are bought and sold. That the main stream in the horse market is running as strong as

ever and that conditions are thereby healthy as far as the commercial type of horse is concerned, seems certain, however." This really represents in a nutshell the state of things also in Toronto.

Nine noted draught horses owned by J. Ogden Armour, including six which won the international championship in Liverpool, 1906, at the International Live Stock Show, were shipped from Chicago last week to England, where they will be entered at the International Horse Show, London. The animals will also be exhibited through England and Scotland, and will participate in the May day parade in Liverpool, May 1, and the Royal Agricultural Show, London, among them is Mr. Armour's Big Jim, the individual champion draught horse of America, which won over King Edward's draught horses at the live stock show in Chicago last December. "Billy" Wales, who has handled the horses since they have been on exhibition, and Dr. William McLeod, special veterinary surgeon in the employ of Mr. Armour, will have charge of the animals on the trip. If all goes well the horses will be on view at the exhibition here next fall.

THE AGRICULTURAL HORSE.

What is the Height, Weight and Breeding of This Animal?

An enquirer from York County wants to know if there is such a thing as the agricultural horse. He contends that there is no such class.

There has been considerable confusion among many persons and farmers also over this classification. There is no such classification on the live stock records, and no exact data of a distinct class that can be described and raised like, for instance, the Clydesdale or the Hackney.

Many fair boards have a class for entries known as the agricultural horse. As a general rule, the description of the horse in the prize lists of the fair is generally understood that Canadian draught horses in use on our Canadian farms for general purpose work are the ones to be drawn upon. In other words, this animal is equivalent to the general purpose animal, which is spoken of more colloquially than officially.

A very warm discussion took place on this question at the Agricultural College last summer at a gathering of farmers. It was readily seen that there was considerable divergence of opinion among leading horse judges as to what constituted a general purpose animal. A great many people draw a distinction between general purpose and agricultural. At any rate, there is no official agricultural horse. In the minds of the general public it consists of a horse good for all farm work, not too heavy, active and strong. The horse would weigh between 1200 and 1450 lbs. As for the breeding of such horses, any farmer would have to use his own judgment. A draught breeding with a dash of blood in them would likely be the nearest to the object desired.

FRUIT TREES

5c AND 7c EACH

Clean, thrifty, warranted true to name. Apples, plums, etc.; also the best of the new varieties. Fruit Plants, 10 kinds Raspberry and all kinds of Currants. Grand assortment of small fruits in large quantities. Direct to Planter. No Agents. Newway Spruce, 12 to 24 inches high, \$3.50. Calypso Spruce, 2 to 3 feet, per 1.50. Canaries, 10 strong roots, mixed, 1.50. Gladiolus, 10 strong roots, mixed, 1.00. Roses, 6 different heavy plants, 1.00. 21 different varieties of small fruits, 65. Spirea, etc., 4 different, 65. The greatest living authorities, compliment our strains, positively the best obtainable at any price. Send for our new catalogue. H. J. Goodall, 1100 Jarvis-st., Toronto. Send for our new catalogue. 60 Imported CLYDESDALE MARES FILLIES

And Several Imported Clyde Stallions

By Auction

At the CAISTOR HOUSE STABLES, Woodstock, Ont., on

TUESDAY, APRIL 16TH, 1907.

Including the champion, Baron Kitchener whose cut appears in this ad. These mares and fillies are essentially a high-class lot, the get of Scotland's most noted sires; they are from 1 to 4 years of age; many of them winners in Scotland; many of them safe in foal; many matched pairs among the lot. They range from the medium-sized flashy kind to the very large drafty kind. The property of Messrs. Butler, Innes, Shaver and McQuary. Terms: Cash, unless other arrangements are made before the sale. For catalogue address—

W. E. BUTLER,
Innes, Shaver and McQuary, Woodstock, Ont.

CAPT. T. E. ROBSON,
AUCTIONEER.

POTASH

FOR FIELD, GARDEN AND ORCHARD

This important plant food may be obtained from all leading fertilizer dealers, in the highly concentrated forms of

MURIATE OF POTASH and SULPHATE OF POTASH

On account of the increased demand for these fertilizers throughout Canada this year, farmers ought to order at once to prevent disappointment.

The judicious use of potash in conjunction with phosphatic and nitrogenous fertilizers cannot and does not fail to bring satisfactory results.

Testimony to this effect is becoming more frequently heard each day.

Write at once for our FREE publications, treating of the fertilization and cultivation of various crops, as well as of the results of fertilizer experiments in Canada and elsewhere.

ROOMS 1102-1105, TEMPLE BUILDING, TORONTO

THE OLD PAN WAY

50% MORE CREAM

The old pan way of raising cream don't pay—it's too messy and fussy—too much work for the women. And it don't pay in dollars and cents because you actually lose 50 per cent of the cream you ought to get. You can increase your cream product about 50 per cent over pan setting; 33 per cent over cans set in cold water; 25 per cent over patent creamers or dilution cans by using the

DON'T PAY

SHARPLES TUBULAR SEPARATOR

Besides you can skim the milk immediately after milking—save the handling and the expense of storage. A tubular separator costs more than a tubular and isn't half so profitable—even if you already have this milk-house it will pay in labor saved, in crocks and pans saved, and the increase in cream will be all clear profit. Of course, when you buy a separator, you want the one that will give you the most profit—you'll want the Tubular—the reasons why are all given in a book which you will want and which we want to send to you free if you will only write for it, ask for book H. 219
