

## SOME DEMANDS OF THE ALLIES IN LAUSANNE PACT

Draft Treaty to be Presented to Turks Tomorrow

Judicial Guarantees Which the Turks Refuse to Accept—Mosul Dealt with in a Few Words, to be Referred to Decision of the League of Nations.

(Canadian Press)  
Lausanne, Jan. 30.—The draft treaty which the Allies will submit for Turkish signature on Wednesday bears the caption: "Project of the Treaty of Peace," thereby bearing evidence that the document is not necessarily definitive. The contracting parties are Turkey, on the one hand and Great Britain, France, Italy, Japan, Rumania and Jugoslavia on the other. The question of judicial guarantees for foreigners is covered in a special declaration which outlines the systems which the Turks refuse to accept. It provides that for at least five years Turkey will organize a corps of legal advisers. The Turkish Government will appoint a commission composed of two Turks and three justices of the League of Nations which will submit a list of foreign advisers. These will be attached to the Ministry of Justice and assigned to service in the Turkish courts in Constantinople, Smyrna, Samsun and Adana and also to the Courts of Appeal and Cassation. One foreigner will be present in ordinary trial cases involving foreigners and they must be in the majority when cases are tried in courts of last appeal. Arrests in large cities can be only on a permit from the legal advisers and foreigners arrested elsewhere, or without a permit from the advisers, can demand to be brought before one of the advisers for a hearing.

Mosul. The problem of Mosul is treated in a few words. The frontier between Turkey and Iraq will be determined in conformity with a decision to be rendered by the council of the League of Nations.

The project for a convention for the administration of the Straits is a separate document. It stipulates that the Straits Control Commission may include a representative of the U. S. when the U. S. adheres to the Straits treaty.

The mysterious guarantee of non-aggression which Turkey demanded is found to be that, in case of any act of war or menace to the security of the demilitarized zones, the high contracting parties, "and in any event, France, Great Britain, Italy and Japan, will hinder them conjointly by every means that the council of the League of Nations may lay down."

The remainder of the convention, by which waterways are open to merchantmen and warships under defined restrictions is virtually as has been reported from time to time.

The treaty fixes the entire frontier of Turkey except that of Mosul. It gives Eastern Thrace to Turkey.

The financial clauses many of which Turkey has refused to accept are set forth in great detail. The visit of E. W. Beatty, president of the C. P. R., which was scheduled for February 7, has been postponed on account of the death of his brother yesterday in Toronto. The telegram bringing the word intimated that President Beatty would arrive here later in the season. R. E. Armstrong, secretary of the Board of Trade, sent a telegram of sympathy to Mr. Beatty.

## SENSATION IN CANADIAN CLUB IN NEW YORK

Charge of Determination to Exclude Jews is Made and Given Emphatic Denial.

New York, Jan. 30.—(Canadian Press)—R. R. Fogel, in resigning membership in the Canadian Club of New York, charged that the club is determined to exclude Jews, according to a copy of his letter of resignation made public here today. The charge has created a sensation in Canadian Club circles and Albert Oliver, president, says it is absurd.

Mr. Fogel wrote that he attended a meeting on January 26, at which the chairman of the membership committee announced the admission of Jews would be discussed. He also reported that the president of the club was saying that the club was determined to exclude Jews. The charge was made in a letter to the club members which was received by the club members today. Mr. Fogel wrote that he was not a Jew and that he was not a member of the club. He also wrote that he was not a member of the club and that he was not a member of the club.

HELD IN \$50,000 ROBBERY.

Former Convict Still a Prisoner, Although Not Identified.

New York, Jan. 30.—Detectives under Captain Patrick J. Randless, in charge of the Brooklyn Detective Bureau, searched the Brownsville section of Brooklyn for suspects in the \$50,000 robbery and hold-up of automobile with three messengers at Lincoln Road near Bedford, avenue, Brooklyn, on Tuesday. A former convict whose identity was kept secret by the detectives, was taken into custody. Seven other men have been taken by the detectives in the round-up, but they were let go.

The former convict was taken to the Municipal Bank in Brownsville, where Elias Gittler, Joseph Slavin and Joseph Bronson, the bank messengers, agreed that the suspect was not one of the four robbers.

The detectives brought their man to the Raymond street jail, where Frank Fulco, the chauffeur of the bank car, is held without bail, charged with acting in concert with the bank robbers. Captain Randless and Detective Thomas Fitzgerald had a long talk with Fulco. After the conference the suspect was taken back to the Snyder avenue station, and it was decided to detain the suspect because of his criminal record and to await the result of other clues.

## SAYS X-RAY TAKES PLACE OF RADIUM

Expert Tells How High-Voltage Machines are Used for Radio-Therapy.

Atlantic City, N. J., Jan. 30.—A sharp decline in the price of radium has been caused by the development of high-power Roentgen ray machines, according to delegates attending the fourth annual meeting of the eastern section of the American Roentgen Ray Society, at the Ritz-Carlton here. "It has been found that the biological effect of radium and the Roentgen ray is identical," said Dr. Charles A. Waters of Johns Hopkins, Baltimore last week. "In other words, machines have been developed which cost upward of \$10,000 and which produce the same radiation as half a million dollars' worth of radium. Rapid strides are being made in volts, and we will be able to utilize 300,000 volts as soon as we can build tubes to carry this voltage."

Announcement was made of an offer of a \$1,000 award by the American Roentgen Ray Society for the best piece of original research in the field of X-ray, radium or radio activity. The competition will close July 1, 1923, and the prize will be awarded by a committee consisting of Dr. George E. Pfahler, Philadelphia; Dr. Frederick Baetjer of Baltimore, and Dr. George W. Holmes of Boston. At the opening session of the convention Dr. Walter Dandy of Baltimore read a paper illustrated by lantern slides, on "The Localization of Brain Tumors by Cerebral Pneumography." Pneumography, it was explained, was a new science which was the result of research in the treatment of brain diseases. Pneumography, it was explained, consisted of puncturing the spinal cord near the affected area, extracting a portion of the spinal fluid, and substituting air, which acts as a barrier to the passage of infection. Extensive experiments have been carried on during the past year, it was stated, on men who had been gassed in the World War. It was shown that where bronchial pneumonia or tuberculosis had not developed excellent results have been attained in the restoration of tissues.

EVANGELISTIC DRIVE WOULD BE WELCOME IN SOVIET RUSSIA

Reform Movement Decided Upon by Church is Described by Bishop Nuelson of Zurich, Switzerland.

Soviet Russia is open to a larger evangelistic and reform movement in the Russian Church, according to Bishop John L. Nuelson of Zurich, Switzerland, who is in charge of the Methodist Episcopal Church, Canada, in Russia, and who arrived recently in the United States after extensive traveling and investigation in that country. Bishop Nuelson said that he was asked many times by the Russian Church to visit the Soviet Union and to lead the Russian Church in general and Methodism in particular. The bishop says: "They told me, 'We are ready to accept the church and its elements of leadership and lead the Church back to the gospel of Jesus Christ and to rid it of the monkish ideas.'"

Bishop Nuelson quoted the Soviet church dignitaries as saying: "We have to build a new church, which is a free church, and under a republican form of government; we want to build on an evangelistic basis. You have had this experience in America, you can tell us how to do this thing."

"I received two documents from these Russian church dignitaries. The first was an invitation issued by the governing body of the Church of Russia to the Methodist Episcopal Church to send fraternal messengers to their next conference, which will meet in February, 1923, in order to advise and guide them in the building up of their Church. The second was one inviting the Protestant churches of America to send fraternal messengers to the Church of Russia."

ROBINS OR GROSBREASTS?

(Toronto Globe).

The rule against the publication of anonymous letters has been suspended to permit of the printing of the following note signed "Nature":

"In today's issue you again refer to the so-called 'Globe robin.' We would expect a newspaper that gives space to such well informed articles on birds as Hamilton Lang's to be more careful about its nature articles. Surely the editor has been informed often enough that there are no robins here in winter—what could a bird live on that subsists on soft food?—but ignorant people mistake the pine grosbeak for our summer visitor, and the Globe encourages their ignorance."

"There are no robins here in winter." In these seven fatal words "Nature" destroys one of our most cherished delusions. Time out of mind readers of this paper have reported the coming of the first robin. The bird they regarded as the harbinger of spring has become known far and wide as the Globe Robin, and to see him first has been considered a win in a fascinating game. Must the robin hide his diminished head as an exposed fraud, a masquerader in garments that are but poor imitations of the real thing? Has "Nature" killed the Globe Robin?

## BOLD BANDITS ROB BOND THIEF

Youth Who Helped Steal \$40,000 in Securities Testifies He was Later Held Up.

New York, Jan. 30.—When he was testifying in a grand larceny trial before Judge Mulqueen in General Sessions, Benjamin Katz, twenty-three years old, of 80 Cedar street, Brooklyn, told the jury that, while it was an easy matter a few years ago to steal hundreds of thousands of dollars' worth of securities in the financial district, it was a difficult matter to dispose of them.

Katz recently pleaded guilty to participating in the theft of \$40,000 worth of securities from Redmond & Co., of 35 Pine street, in June, 1921. He is awaiting sentence. He was called as a witness for the prosecution yesterday in the trial of Benjamin Wittman, twenty-three years old, of 1624 Kings Highway, Brooklyn, on a charge of criminally receiving the stolen securities from the witness. At the conclusion of Katz's story, Wittman pleaded guilty. Reuben Mirsch, twenty-three years old, of 1444 Forty-sixth street, Brooklyn, also pleaded guilty. The three will be sentenced by Judge Fulgencio next week.

Katz testified that he met Wittman in the office of the National Binding Co., 221 Wooster street, a short time before the robbery and that Wittman introduced him to Hirsch, who was employed in the place as a binder.

"They told me that it was a shame that outsiders and strangers were getting all the money down in Wall Street," he said, "and that there was no reason why we should not have some of it. We went down to an exchange where messengers are employed, and Wittman gave me a ticket calling for a messenger to go to Redmond & Co's office, in the trial of Benjamin Wittman, twenty-three years old, of 1624 Kings Highway, Brooklyn, on a charge of criminally receiving the stolen securities from the witness. At the conclusion of Katz's story, Wittman pleaded guilty. Reuben Mirsch, twenty-three years old, of 1444 Forty-sixth street, Brooklyn, also pleaded guilty. The three will be sentenced by Judge Fulgencio next week."

"Wittman and I went to Baltimore to dispose of them," Katz continued. "When we couldn't dispose of them there we returned with them to this city. Later Hirsch called me on the telephone and said that he had a Spanish banker from Havana who wanted to buy the bonds. We went to a place in East 118th street between Fifth and Lenox avenues and Wittman and I went upstairs, but Hirsch remained below."

"Instead of meeting a Spanish banker we were confronted by three hold-up men who took the bonds from us, after threatening us with pistols. So, Judge, all that I got out of the theft was a trip to Baltimore, which Hirsch paid for."

Harry Schneiderman of 261 Watkins street, Brooklyn, had previously testified that he had been requested by one of the trio of robbers to go to the East 118th street place to establish the value of the securities, which, he alleged, he did not know had been stolen. He said that when he tried to prevent the hold-up men from getting away with the securities they broke his nose.

The word lynch probably comes from Charles Lynch, who during the Revolutionary war headed parties of citizens to execute Tories.

## THE HUNTING PRINCES

(Manchester Guardian)

The Prince of Wales and his brothers have made themselves as popular as usual in the Norfolk-hunting field, but the sport cannot be altogether to a hunter's taste for jumping, as the chief obstacles in a country dedicated to shooting are rabbit-holes. The passion for riding shown by the King's sons is an unexpected trait. Neither King Edward nor King George cared anything about hunting, and only rode well because riding had been part of their education and they had fairly good natural seats on a horse. Queen Mary never rode, and of course Queen Victoria only "hacked" or rode at recreation.

The taste must surely have been inherited from Queen Alexandra, who was as bold as well as a graceful rider, although she was always obliged to ride on the wrong side. But accompanied by Sir Dighton Probyn, she would take every opportunity of hunting from Sandringham, and she took whatever fences presented themselves, whether in the course of the hunt or her way home. She was a very delicate-looking woman, but a very capable horsewoman and a keen follower to hounds.

Unlike his grandfather and father, too, the Prince does not care for shooting, and it is not a necessity at shooting which he visits always to raise a household party.

More than a million patients pass through New York hospitals annually.

Avoid Harmful Grit

Expenditure on the film and removal of it without harmful effect. The following is the name of the film: Pepsodent.

The name of that tooth paste is Pepsodent, and for seven years dentists everywhere have been urging its adoption.

Fights acid, too

Pepsodent also gives manifold power to Nature's acid-fighting agents. It multiplies the alkalinity of the saliva. That is there to neutralize mouth acids, the cause of tooth decay. It multiplies the starch digestant in the saliva. That is there to digest starch deposits which may otherwise ferment and form acids.

Old-time tooth pastes reduced those agents every time one used them.

Millions use it

Nearly everybody suffered from that film. So dental science sought ways to combat it. After long research, two ways were discovered. One acts to curdle film, one to remove it, and without any harmful scouring.

Ample authorities proved those ways effective. Then a new-type tooth paste was created, based on modern research. Those two great film combatants were embodied in it.

Combats the film

Film is what makes teeth dingy—that viscous film you feel. It clings to teeth, enters crevices and stains. Food stains, etc., discolor it. Then it forms cloudy coats. Tartar is based on film.

Old-time tooth pastes could not effectively combat it. So beautiful teeth were seen less often than now. Tooth troubles, caused by film, came to nearly everybody.

Ways to fight it
