

GEOLOGICAL NOTES

Note 1

Palaeozoic rocks are found in the eastern portion of the map, and consist of a series of strata which are deposited in the order shown in the list on the left. The rocks are generally of the Silurian age, but they are also of the Devonian age. The several formations are of different thickness, but they are all of the same general character, and they are all of the same general composition. The rocks are all of the same general character, and they are all of the same general composition. The rocks are all of the same general character, and they are all of the same general composition.

Note 2

The rocks of the map are of the same general character, and they are all of the same general composition. The rocks are all of the same general character, and they are all of the same general composition. The rocks are all of the same general character, and they are all of the same general composition. The rocks are all of the same general character, and they are all of the same general composition.
