

FIELD CROP OF DOMINION

Yield and Condition at End of August Compared With Record for Ten Years.

The Dominion Bureau of Statistics issue the following report on the yield and condition of field crops in Canada, as compared to the corresponding crop correspondents at the end of August:

The first reports made by crop correspondents on the average yields per acre of wheat, oats, barley, rye and flaxseed show that for the whole of Canada, the yields per acre are for spring wheat 16 1-2 bushels, as compared with 9 1-2 bushels last year, and with 16 1-2 bushels the decennial average for the period 1910-19; for oats 26 1-2 bushels, compared with 26 1-4 bushels last year and 33 1-4 bushels the ten-year average; for barley 25 1-2 bushels, compared with 21 1-4 bushels last year and 25 3-4 bushels, the ten year average; for rye 17 3-4 bushels, compared with 13 1-2 bushels last year, and 16 bushels the ten-year average; and for flaxseed 9 1-4 bushels, compared with 5 bushels last year, and 4 1-4 bushels the ten-year average.

These figures indicate, therefore, that for wheat the yield is just equal to the decennial average, that for oats the yield is 2 1-4 bushels above average, that for barley and rye it is 1-4 bushel below average, and that for flax it is practically equal to the average. Applying the averages for 1920 to the latest estimates of areas sown (these areas being shortly subject to final revision), we get as the preliminary estimate for the whole of Canada total yield as follows: Wheat, 289,000 bushels, as against 183,260,400 bushels last year; oats, 556,719,000 bushels, as against 394,387,000 bushels; barley, 64,257,000 bushels, as against 56,389,400 bushels; rye, 12,916,000 bushels, as against 10,207,400 bushels, and flaxseed, 11,990,000 bushels, as against 5,472,800 bushels.

The average condition on Aug. 31 of late sown field and fodder crops, expressed numerically in percentages of the average yield per acre for the ten years 1910-19, was reported as follows: The figures within brackets representing in the order given the condition on July 31, 1920, and on Aug. 31, 1919: Peas, 96 (102, 87); beans, 99 (103, 93); buckwheat, 99 (101, 95); mixed grains, 104 (105, 87); corn for silage, 98 (95, 89); potatoes, 103 (85, 99); fodder corn, 100 (98, 97); sugar beets, 96 (99, 83); pasture, 92 (89, 91).

Tartaric Acid From Coal Tar.

By a newly discovered process, tartaric acid is made from coal tar, for which process John M. Weiss and C. E. Downs, two well-known manufacturing chemists are responsible. Tartaric acid has hitherto been made from cream of tartar, a solid found in the bottom of wine casks and employed principally in the making of baking powder. The United States before the prohibition were engaged in the vineyards where wine grapes are raised, produced 10,000,000 pounds of cream of tartar a year and about 1,000,000 pounds of tartaric acid. As the cream of tartar cannot be obtained except through the fermentation of the wine, the grape juice industry is unable to supply the household and hitherto filled from the vats of the vintner.

WORLD AIR TOURS

On Schedule Basis is British Company's Plan.

It is reported that a responsible British company proposes to put into execution a world-embracing plan for passenger airship transportation. Routes have been planned so that no important city will be more than 10 days' air journey from London, the following being the chief main lines and times occupied in making flights from London:

Table with 3 columns: City, Miles, Days. London to New York (3000, 2 1/2), San Francisco (4700, 4 1/2), Cairo (2750, 1 1/2), Colombo (5450, 4 1/2), Perth (Australia) (8600, 7), Nairobi (4150, 2 1/2), Capetown (6350, 3 1/2).

The trip from London to Capetown will include a 12-hour stop at Nairobi, Cairo and Lisbon are to be two of the traffic junctions, the former, which will be reached from London by way of Tunis, for the southern route to Capetown by way of Nairobi, and for the eastern route to Sydney by way of Aden, Colombo and Perth. West of London the first stop is to be at Lisbon, whence the trip to New York and San Francisco will proceed by way of the Azores, and to Rio Janeiro by way of Sierra Leone.

It is pointed out that while the speed of airships is less than that of airplanes, it is five times greater than that of the average ocean liner, and a non-stop flight up to 10,000 miles from London will be: To New York \$234; to Capetown, \$876, and to Australia \$696. This is approximately eight cents a mile. Mail will be carried at six cents an ounce.

A Mite of Radium a Mass of Material.

A tube of radium generally made use of by physicians is about a shade under an inch in length and about an eighth in diameter. It contains 100 milligrams of radium bromide. This minute quantity is the product of twelve tons of ore, three tons of hydrochloric acid, five tons of carbon, one ton of sulphuric acid, and one ton of coal, burned in the operation of reduction, more than a month of work and five hundred successive crystallizations.

Cocoon Tree's Many Virtues.

The cocoon tree is one of the most useful of all trees to the natives of the regions where the cocoon grows. The nut comprises a food and drink and the milk of the nut may be made into an intoxicant where that is desired. Its fibre is used for making ropes, rugs and matting and the husk for fuel. The wood is very durable and is used for many purposes.

Poultry World

SAFE AND SANE BREEDING. (J. Harry Wolsieffer, in Philadelphia Record.)

These are the poultry keepers' dull days. By that one means that hatching and rearing chicks are at an end except in rare cases and for special purposes and that now is the time on the well regulated plant for watchful waiting. The cockerels are being disposed of on the open market, and the pullets making their usual growth. During this period there is much time for reflection; for in a very large measure the winter and spring crop will be made during the summer and in another year. Some poultry raisers are feeding and caring for these growing chicks under the so-called forced method, that they will come into laying early and when once producing will be kept at a high pressure throughout the winter and spring. In many instances artificial lights will be used to increase the egg yield during the winter months. How far can the breeder go in this direction of forced egg production without harming the fowls, as far as breeding qualifications are concerned has some time been uppermost in the minds of those poultry experts of years of experience, and in no sense of belittling the good progress that has been made to improve the hens laying qualities; there is, however, a time to stop, look and listen, are the hens accomplishing what may take a number of years to repair. Every poultry keeper knows that this year's fertility, hatchability and liveability was none too good, nor was it at a flattering average the year before; and from good reports comes the lowest figures from the so-called "brooder" pens. Those whose sole aim is to obtain the largest egg yield possible.

The successful poultry farm of today must not only obtain a fair percentage of eggs from the flock, but at hatching time a good number of fertile eggs that will hatch strong chicks. These eggs, being hatched, will live and thrive under fair care and treatment without a heavy death rate, or an excessive number of culls. More is known today than ever about the feeding and care of poultry. House-trap conditions are better. More and more incubators and brooders are at the disposal of the poultry raiser.

Shiloh 30 Drops Coughs. Since 1870. For Coughs, Croup, Whooping Cough, Sore Throat, Bronchitis, Asthma, Hay Fever, and all other respiratory ailments. Sold everywhere.

poultry raisers disposal, yet, withal, the percentage of chicks hatched and reared, and the number of culls resulting from those that live are far too great in numbers, in the face of all the modern improvements in the handling of the fowls, and the leading poultry experts know that it comes from failing to follow safe and sane breeding rules in the mad rush for more eggs.

To obtain as many eggs from the hens as is possible is a laudable thing for the poultry raiser to aim for. But it is doubtful if anything is gained when the producing of a dozen more eggs by the hen is to the detriment of future breeding possibilities. One takes long chances in trying to beat nature, and the more artificial the methods used the more care should be exercised. Artificial lighting during the winter and early spring months should not be used on the fowls that are to be kept for breeding purposes, and if used should be handled with extreme care. Fowls for breeding should be handled in a different manner than those in the commercial pens, whose sole duty in the eyes of their keeper is to produce as many eggs as possible, nor should the growing pullets now on the range, or in yards, be unduly forced for growth.

The best future breeders will be those that have grown from incubation to full maturity without a check under what one would call natural draft, not a forced one. This class of birds will produce many eggs when fully matured, and when at the proper age will be able to produce a large number of chicks with a small percentage of culls. The other class may be called utility birds pure and simple, and to this line the poultry-keepers can use his so-called forced method of producing eggs to the limit and still not harm the usefulness of his flock, for in this breeding class other methods are used which one may call "safe and sane," with the idea of net eggs alone, but stamina and vigor, and the upbuilding of the future flock instead of tearing it down.

TO WOMEN OF MIDDLE AGE

This Woman's Letter Tells You How To Pass The Crisis Safely.

Lascelles, P. Q.—"During the Change of Life I felt so weak and run down I could hardly do my work. The perspiration would pour over my face so that I couldn't see what I was doing. We live on a farm, so there is lots to do, but many who felt as I did would have been in bed. I took Lydia E. Pinkham's Vegetable Compound and it did me a world of good. I tried other remedies but I put Vegetable Compound ahead of them all, and I tell every one I know how much good it has done me."—Mrs. DUNCAN BROWN, Lascelles, Prov. Quebec.

Such warning symptoms as sense of suffocation, hot flashes, headaches, backaches, dizziness, palpitation of the heart, sparks before the eyes, irregularities, constipation, variable appetite, weakness and nervousness should be heeded by middle-aged women, and let Lydia E. Pinkham's Vegetable Compound carry them safely through this crisis as it did Mrs. Brown.

You are invited to write for free advice. No other medicine has been so successful in relieving women's troubles as Lydia E. Pinkham's Vegetable Compound. Women may receive free and helpful advice by writing the Lydia E. Pinkham Medicine Co., Lynn, Mass.

BRITAIN'S WAR DUMPS.

London Times Tells of Waste of Material. No more palpable example of the waste of public money, says the London Times in a special article attacking the Government, could be found anywhere at the present time than that offered by the Army Ordnance Depot at Chilwell, near Nottingham. During the war Chilwell became known as "the V. G. factory." Here were piled 15 1/2 million shells or 50.8 per cent. of all the high explosive shells used by the British army, a task which cost 134 or the employees their lives in the terrible explosion of July, 1918.

It is now a "dump." The site comprises 18 acres and semi-buildings cover 10 acres under a single roof. Soon after the million or so of full shells lying here when the armistice was declared were removed, the Government began to bring train-loads of "war material" from the various depots to the dump. The various depots of pounds' worth of stores lie rotting and rusting. Vast as the buildings are they cannot accommodate more than a fraction of the stuff that has been piled up and is still being piled up. "The site of the material has been open for months. It is a disgrace that it was not broken out long ago and cleared away."

There are stores enough to equip an army and to supply a number of smaller armies. The stores include 10,000,000 pairs of Carigan jackets, 2,000,000 pairs of Scotch tweed jackets, 2,000,000 pairs of Scotch kilts, 2,000,000 pairs of Scotch sporrans, 2,000,000 pairs of Scotch hose,
