

... USE ...

# PARAGON

## Tablet Gum

Its  
Recommendations  
are ...

**First,** Enables you to make up tablets and cut them apart in fifteen minutes, or less time if desired, and is exceedingly valuable to paper manufacturers for sealing paper.

**Second,** Will allow the tablets to be opened and a sheet extracted from the middle without weakening the block in any part.

**Third,** Can be used on jobs printed in gangs, and cut up when dry, the bevel of the knife not affecting it in the least.

**Fourth,** Will remain strong and flexible until the last sheet is used, it being nearly as elastic and flexible as rubber.

**Fifth,** Will not pull off on the edge of sheets. This prevents the sheets from sticking to letter copying books and tearing the leaves out when copying.

**Sixth,** Will melt very quickly in a common glue pot, and with less heat than glue. It is much easier applied, and will not become sticky in hot weather.

IN TINS

1¼, 3, 5, 8, 12, 25 and 65  
Pound Tins

In RED
