

# THERAPEUTIC NOTES.

**Selective Action of Sanmetto on Genito-Urinary Apparatus.**—Dr. J. T. Newman, of New Orleans, La., in a paper on "The Selective Action of Sanmetto upon the Genito-Urinary Apparatus," says: "I have used this remedy (Sanmetto) in all forms of cystitis and other affections of the urinary apparatus, but I desire more particularly to call attention to its value in chronic prostatitis, which occurs more especially among old men; and I can truly say, without exaggeration, that in my hands it has especially selective action upon the prostate. I am sure that any medical man, who will give Sanmetto an impartial trial, will become convinced of the truthfulness of this assertion."

**Abnormal Mental Strain at Age of Puberty.**—To young girls arriving at womanhood, many times laboring under abnormal mental strain from over-study and from the additional nervous tension due to the physical changes incidental to the first menstruation, Hayden's Viburnum Compound is particularly serviceable. It is a uterine sedative and calmative and assists in the normalization of the pelvic circulation. Hayden's Viburnum Compound has stood the test of time and for twenty-five years has been accepted and recognized as the standard remedy in the treatment of Dysmenorrhea, Amenorrhea, Menorrhagia and other diseases of the uterus and its appendages. To assure results the genuine Hayden

Viburnum Compound only should be administered. Literature will be sent on request and sample, if express charges are paid, by the New York Pharmaceutical Co., Bedford Springs, Mass.

**Spraying for Diseases of the Respiratory Passages.**—Dr. David Walsh, senior physician to the Western Skin Hospital, London, writes: "Glyco-Thymoline was brought to my notice as an excellent lotion for nasal and oral sprays and washes. On due inquiry it was found to fulfill the two conditions usually recognized by medical men in the United Kingdom as vouching for the character, so to speak, of such a preparation. First, its advertisements are accepted by our three leading journals, the *Lancet*, *British Medical Journal* and the *Medical Press and Circular*. Secondly, its composition is not a secret, its formula being freely published. Under these circumstances, I determined to try the effect of this preparation in a few suitable cases. As a general antiseptic fluid that does not coagulate albumen, and is non-irritating, deodorant and practically non-poisonous, Glyco-Thymoline has clearly a wide range of usefulness. My own observations, however, have been practically confined to its use in the nose and mouth, with results that have proved satisfactory in every instance, especially in acute coryza, pharyngitis, influenza and septic conditions of the mouth."
