# \* COUNTRY NOTES AND PRICES \*

## GRENVILLE COUNTY

GRENVILLE COUNTY Presout.-Partures are looking flux. Some farmers have finished seeding but a great number have just started. The sidering the good grass coves are nor-milition; as well as last spring. Timothy hay, 800 a ton; clover, 800; hald straw, 812; loose, 810; bran, 844; oats, 76c a hu; corn, 75c; fresh eggs, 16c to 17c a down barries and the straw and the straw and the straw barries and the straw PRINCE EDWARD COUNTY

PRINCE ENWARD COUNTY Rosen Hall-Pastures are growing very fast. Rarly sown grain on high lands is coming along fine but on the low lands, rains The weather is very favorable to rapid growth and grain and grans is soon-ing fast. Owing to the searcity of feed and late apring, the make of checes is don. creamery butter, Be a Ba, milch own, 490 each, hogs, 6c; lamb, 6c; Thir-olthy hay, 437 a ton; mixed, 551; bran, 424, middlings, 825; loose straw, 64 a load; out, orac, 762-0. M. M. OXPORD COUNTY

pear, 756-70. M. M. OFFORD COUNTY Norwich.—Seeding has been very hack-ward this spring and all will not be in the ground till after the 24th. Wheat is look-ing very well also old and young meads up. Prospects for large crops of fruit were never better. Hogs, 855 a evt., 1.v.; potatoes, 756 a has; fresh eggs, 156 a doi; roll burtler, 256 a hb; mixed larg, 255, middlings, 857, oats, 866 a hu; wheat, 806.-M. J. McK

#### WENTWORTH COUNTY

Ancaster.-Fall wheat and clover are looking unusually well. Seeding has not been completed, but some spring grains that have been sown are coming up nice-

iy. The weather has been very cold and wet, but lately has changed, and things are growing rapidly. Fruit prospects are good. Timothy hay, 816 to 816 at on: mixed, 815.80, loose straw 810 to 811; onts. Sie to 86: corn. 75c; fresh egg, 55 to 166 a dost; turnips, 25c a ba; potatees, 81 add: turnips, 25c a ba; potatees, 81 each: stockers, 83/c a ba; export, 63/c add, 81.8, 82.

## NORTH PETERBORO COUNTY

NORTH PERCENDENCE CONTROL Clover came through the winter in good shape. On some of the dry and poor qual-ity of land, the seeding, woing to weather conditions last spring and summer, is practically a failure, and in some places thin. With the above exceptions, meadows and maximes wesant a good appearance and pastures present a good appearance at present. No fall wheat grown here.

at present no fail wheat grown here. As to grain, the early seeding on dry land has had-exceptionally favorable con-ditions so far. Oats is the principal grain grown here. There is a good deal of seeding to be done yet on the low lands and the lats seeding is not so favorable for a good yield of grain—F. P. Glalway.

### VICTORIA COUNTY

VICTORIA COUNTY Seeding was commenced about the same time as last year, but lasted somewhat longer on account of abovery weather. Speaking in a general way, seeding com-menced on Ayril 22 and was finished on May 16. Growth has been much more range of the second second second and the second present prior than the distribution of all wheat came through the winter weal. while others are some

the winter well, while others are some-what patchy, but on the whole, it bids fair to be a good crop.

The acreage of aliske will be somewhat under the average, owing to the dry weather of last summer. Any pieces which were a good catch last fail came through the winter well.-G. C. Channon.

#### YORK COUNTY.

YORK COUNTY. Beeding on clay lands is very backward owing to the wet apring. There has been a wonderful growth of grass on the new pastares, but the older ones require more ally managels, are about two weeks latc. Fall wheat looks well, although it is win-ter-killed in some places. Fruit trees are looking well and a few warm, simabiny days will work endocraba. R. Dennish

# PEEL COUNTY

PEEL COUNTY In this locality seeding operations are very hackward. Very few farmers have finished seeding. However, if the weather keeps dry, the majority will finish this week. Until up to about the last 12 or 13 days, there has been very little growth second and proving rapidly. Except for a few odd epois, fall wheat never looked better. The most of the land that was seeded to clover a year aro is a com-plete failure. Quite a los of the clover in the second at Movever, pastures and meadows are making a rapid growth this last few days.-E. E. Wilson.

### HURON COUNTY

HURON COUNTY Goderich-Seeding in this locality is well advanced. Frequent heavy rains caused considerable delay, but as they were followed by warm weather, the land dried out rapidly, especially that which is underdrained. Two or three days' fas-orable wather would now enable the ma-jority of farmers to complete their need-ing operations. This spring has shown the decided advantage of undersa in this respect have flarongid their seeding and response theorem for their root and are norm.

are now preparing for their root and corn crops. Fall wheat came through the winter well and is now doing peloidly. That a yet but there is a considerable are-on summerfailowed land is looking well, while that on clover sod and pass stub ble shows the effect of the drought last ing, all of which is looking well. On the experimental farm aftaths swinter nicely considerably, as are in many cases, a rompute failure the clover hein emitters winter killed. Some, however, look fairly

promising. The older meadows are look promising. The older mendows are look-ing well, more especially those not pas-tured after the hay was taken off last year. Pastures are providing abundant feed for the stock already. Catilo were usual no account of the shortnage of feed, but as there will probably be fewer ani-mals this year, the effect of early pas-turing may not be noticed. Vegotation is a least two weeks ahead of last year. The fruit trees are abouting a luxurious blocm—D. 4, banded.

#### LINCOLN COUNTY

In our immediate section In our immediate section, seeding is about done, and most of the oats sown are well up. On low ground, however, very little has as yet been done. Vegeta-tion is backward although the last few days of warm weather have brought things along with a rush.

things along with a rush. Fruit growing and the production of canning factory crops are the main branches in this section. Fruit trees of all kinds are now in full bloom, and show-ing promise of a good crop. Bitrawhorrise plants are backward where grown under cotton; those under giass looking well. The cold, wet weather has made it diffi-cult to get in other factory crops, and in general, the growers are rather more 0. B. McCalla. G. B. McCalla.

#### NORFOLK COUNTY

While the majority of farmers are through seeding, there is yet considerable to be done on the heavy clay land.

we some on the Beavy clay land.
Prospects are poor for spring grain, such as oats, barley, etc., but very good for fall wheat. Pastures and meadows look fine, clover being excellent this year.
-H. 8. Austin.

# WATERLOO COUNTY

Ayr.-Most of the seeding was finished by the tenth of May, but a few on wet by

by the tenth of May, but a few on wet and undrained land were later, owing to the wet weather of the last couple of wery little being winter-killed. wery little being winter-killed growth. Some of the masdows are rather thin, owing to the dry weather of last wason, giving a poor stand of clover and grass. To make matters worse, they were pastured too close in the fall, owing to the shortage of grass in the regular pas-tures—dive. C Sunya

### WELLINGTON COUNTY

WELLINGTON COUNTY Harriston-This has been a very back-ward spring, with quite a lot of rain, but farmers with 100 acres are through seding. The ones with over one hundred are not quite finished. Pall wheat came through the winter well. The meadows are good and the hay is coming along fine.-Alfred Howes.

MIDDLESEX COUNTY

MIDDLESEX COUNTY Seeding is practically completed in this section. Farmers are busy preparing corn and root ground. The weather for the past few days has been exceptionally fine and wara. We have had piethy of rain recently and erops and meadows, also pattarn or for the piethy of rain rest of the section of the section of the pattarn or for the section of the pattarn of the onditions continue, all kinds of crops canot fail to be first class.—W. Waddell. LACOMBE ALREETA.

#### LACOMBE, ALBERTA.

LACOMEE, ALBERTA. This seeding is all michole and has rome in in good condition in this distict. We are having a very favorable spring, fully one month earlier than hast year. The fail wheat has attained a growth of 13 to 15 inches and in some instances more. The spring grain, particularly the earlier sown, is up at least 6 inches while the meadows and pastures in the district are looking remarkably well. The pasture is has yers, largely one is acon careful and any set of the state of the state of the system of the system of the state of the system of the state of the state of the system of the state of the system of

It is desirable to mention the name of this publication when writing to advertisers.

and as the acreage is much increased over last year, it will mean much to the western provinces if these promises of good crops are realized.-G. H. Hutton.
