Ransome Concrete Mixers

Increase Efficiency and decrease cost of operation

With a Ransome Concrete Mixer, concrete can be turned out at the minimum cost. Our discharge arrangement is perfect. By the simple tilting of the discharge lever the concrete is discharged from the mixing drum without delaying, for a moment, the mixing operation.

Then again, the concrete is discharged directly into the bucket or barrow etc. You don't discharge concrete on to the ground and then reshovel same. Our mixer has many other advantages over all other types of machines and we would like to go into the question with you. Can we? Just drop us a line.
