PATRIOTIC RALLY OF KINGS
COUNTY AGRICULTURISTS
IN PASTIME HALL, JAN. 10Morning Session at 10.30
Afternoon at 2 o'clock

This meeting is being called by the Kings County Farmers' Association. The object is to develop an Agricultural policy for Kings County that all agriculturists may adopt as best calculated to give the most needed help to the nation in the present struggle for freedom and right.

The aim is to bring together representative farmers from every section of Kings County. These men will include the members of the Municipal Council, the Kings County Farmers' Association, directors and members; the officers and directors of the different agricultural societies of the County and officers and members of the Nova Scotia Fruit Growers Association in the County. Through these men it is hoped a definite line of agricultural endeavors for the County as thought best calculated to meet the requirements of the Empire may be decided upon.

All the agriculturists feel

their responsibility and have a desire to do their "bit" in the most effective way, but as yet there is no concerted action, or definite policy as to what might best enable them to do their full share in helping in the most effective way to bring the present war to a victorious conclusion.

From what can be seen at present the war is likely to continue for several years, and even with the best organization by a farming communities the agricultural resources of the country will be taxed to the utmost. Certain lines of agricultural production may be of paramount importance in bringing final victory, and on the whole these may not be the most profitable for Kings County agriculturists, it is our duty, however to turn our energies in the direction that will give the best aid, even should it mean a great sacrifice, the greater the sacrifice the greater the part we play, as a County, or a people in helping to win the war.

Let Kings County lead the way, and start a wave of enthusiasm with definite action. Call it the "Kings County Farmers' War Policy" If you will, let us be a potent factor in helping to

furnish food products more essential for the successful prosecution of the War.

Only by taking joint action can we hope to do our best as a County. Only by having a definite object in view can we turn our agricultural effort to the best advantage. Sink the thought of self, and look at the matter from the standpoint of those who are looking to us for help. Come see us. Have a talk together to decide what is best from the standpoint of present requirements and our agricultural possibilities. Keep this date in mind and let Kings County farmers make this a grand success by their active participation.

The matters discussed will have a bearing entirely upon farm production as related to war conditions and the question will be taken up entirely by Kings County farmers.

Matters of policy which may be decided as desirable under present conditions are the following:

As all Canadian exportable wheat will be required until the end of the war and probably for sometime after, by the Empire and Allied Countries at war, we as farmers of Kings County believe it is our duty to grow the wheat necessary to meet our requirements as far as possible and that this association should effect the organization so that seed wheat as required may be secured at an early date at the most reasonable prices possible.

That all live stock should be conserved until such time as it can be utilized to best advantage to furnish meal or dairy products; That the killing of calves which could be reared for meat or dairy, and the doing away of heifers for beef, and the putting off of dairy cows because exportable feeds are so high is not in the best interest of the nation at the present time. The aim should be to grow more fodder crops, so that livestock may be increased rather than decreased.

As clover hay comes next to grain as a feed for stock we as farmers consider it is desirable to make a general increase in areas seeded to clover and as reliable tests show that the clover crop may be doubled in yield on Kings County soils by the use of ground limestone, we are convinced that efforts should be made to utilize this means in the most effective way to increase the clover crop, thereby relieving feeds for export otherwise required to take the place of clover.

As compared with the present value of feeds turnips are worth 15 cents per bushel for food value, and in addition they make it possible to utilize much rough fodder, that otherwise could not be used to profit without meal, we, therefore, believe it is in the interest of the national welfare that the root crops should as far as possible be doubled next season on the farms of our County.

The source of our potash has been cut off. The liquid from animals contain four-fifths of the potash voided by them, and, if this source of potash is not carefully guarded from loss, "may materially reduce our future crop yield. We, therefore believe it is our duty as agriculturists to use every effort to prevent such a loss by encouraging more care in the handling of manures made on the farm, and the collecting of all liquids by using absorbents such as straw or old hay.

We are of the opinion that more might be done in advancing agricultural knowledge through agricultural meetings of farmers being more generally held throughout the country and are prepared to give our support to any endeavors that will assist in spreading agricultural knowledge that will enable us to grow more and better crops, thereby assisting in the mighty task the Empire is now facing.
