for spring crops, and ine reclammed e meadow was nown to doke and timothy. Thus in one year the farm wampbrought into a a productive state, with but a very small expenditure, and the third year the clear profit from it, after deducting every ex-pense, was nearly equal to twenty-live per ionn upon the purchase cost of the lead. The fifth year the farm supported forty head of cattle and two hundred sheep, -besides other stock, with some help from purchased feed, as oil-take and bran. In this instance, although there were some ex-coptional circomstance, yet there are many things that may suggest ideas to some far-mer who are endeavouring to find a way toward needed improvement in their farms, but who, for want of money capital, are obliged to use that which they possess in in-dwards and farcilite of resurves. W. MANAGEMENT OF CALVES.

At a recent meeting of the Kings England) Farmer's Club, Mr. H. Cox a excellent paper on "Breeding and F an excellent paper on "Breeding and Feed-ing Stock," from the report of which in the Mark Lane Express we extract the following
