

in Medicine, Royal College of Physicians, London. Second revised edition. Crown octavo, 342 pages, extra cloth. Price, \$2.00 net. F. A. Davis Company, Publishers, 1914-16 Cherry Street, Philadelphia.

The human body is a busy and complicated chemical laboratory, and the work of Bouchard on Auto-intoxication proves this beyond a doubt. When Dr. Bouchard's book appeared some years ago it attracted no small amount of attention. The present edition brings the study of Auto-intoxication well up to date. Dr. Oliver has given us an excellent translation of the original. The whole work tends to give the reader a new view of disease, and is well worthy of close study. It is just such a book as should be in the hands of every physician.

MISCELLANEOUS.

ECTHOL (BATTLE & CO.)

J. A. Herring, M.D., Myrtle Springs, Texas, says in *The Alkaloidal Clinic*: "I have just received *The Clinic*, and find an article by Dr. Thudichum on "Echinacea." I have used it with perfect success for the last five years, first employing Lloyd's scientific tincture, and later Ecthol, from Battle & Co., containing echinacea and thuja. I give the former the credit. And I want to say that it is a specific for all that Dr. Thudichum says. It has been so in my hands. I have just counted the empty Ecthol bottles in my office, and find twenty-six used in the last year. In fact, people come twenty-five and fifty miles to have me treat old sore shins and the like. It stops boils and carbuncles; and I give it in all glandular inflammation. Pus and Ecthol cannot stay in the same place. Try it, Doctor, and you will be convinced.

A NEW LIQUID ANTISEPTIC.

Parke, Davis & Co. have recently introduced a new liquid antiseptic of considerable power, called Cresylone. It contains 50 per cent. of Cresylic Acid, and forms clear solutions with water in all proportions.

A two per cent. solution of Cresylone is not only an excellent disinfectant for instruments and hands, but a valuable detergent and lubricant, too. It is said not to injure metallic or rubber instruments, though celluloid articles are apt to become friable under its action.

In the treatment of wounds a one per cent. solution is usually employed, and a two per cent. solution may be used in profoundly septic cases when more vigorous measures are indicated.
