

## TOTAL OF \$226,000 BEQUEATHED BY THE LATE PRESIDENT HARDING

Will Filed for Probate—His \$100,000 Estate Left to Widow.

Marion, O., Sept. 11.—Bequests totaling \$226,000 were made to relatives, life-long friends, churches and the Marion Park Association by President Warren G. Harding under the terms of his will filed for probate here.

Mrs. Florence Kling Harding was left a life estate of \$100,000 in Government bonds, the east half of the building now occupied by the Marion Star, the Harding home on Mt. Vernon avenue, with all personal property there, with the request that Mrs. Harding give to each of the three sons of Dr. George T. Harding, Jr., of Columbus, brother of the President, a finger ring and watch.

Dr. George T. Harding, father of the President, was left a life estate of \$50,000 in Government bonds and a home where he resides. At Dr. Harding's death the home is to revert to Dr. Harding's son and three daughters.

The President made a stipulation that "no part of my estate shall be expended for a monument other than a simple marker at my grave."

The President left to Mrs. Harding "all dividends that accrue from and are paid on my entire stockholdings in the Harding Publishing Company." Mrs. Harding directed that it be left to Mrs. Harding's judgment "the bestowal of gifts, souvenirs, mementoes and any other articles of value to any society, organization or person she may see fit."

The two grandchildren of Mrs. Harding, Jean DeWolfe and George DeWolfe, are left \$2,000 each under the will.

To his three nephews and one niece, children of Dr. George T. Harding, Jr., the President left \$10,000 each.

Three old employees of the Marion Star, the newspaper formerly owned by Mr. Harding, are left small gifts, "a mark of appreciation of the faithful service rendered." George H. Van Fleet, managing editor, was given \$2,000, Henry Schaffner, treasurer, \$1,000 and James C. Woods, circulation manager, \$1,000.

Trinity Baptist Church, of which Mr. Harding was a trustee, was left \$2,000 and St. Paul's Episcopal Church, which stands next to the Star office, was given \$1,000.

The sum of \$25,000 was left to the Marion Park Commission, "to be applied in the creation of some permanent improvement to be determined by the commission and to be created in any one of the three parks in Marion." Residue to Brothers and Sisters.

All the residue of the estate is left to Mr. Harding's three sisters, Mrs. Carolyn Votaw of Washington, Mrs. Charity M. Remsburg of St. Anne, Calif., and Miss Abigail Harding of Marion, and to his brothers, Dr. George T. Harding, Jr., of Columbus, "share and share alike," and "in the event that my sisters or brother should not survive me, but should leave children, such children shall receive their parents' share."

### A VALUABLE BOOK

The Canadian Manufacturers' Association has just issued its Canadian Trade Index for 1923-24. In the introduction we read:

"The primary aim of the publishers has been to provide all buyers of Canadian manufactured goods, in whatever country they may be, with a dependable list of the articles made in Canada and the names of the manufacturers making them. In this edition, with the co-operation of the Department of Trade and Commerce, Ottawa, there has been added a list of exporters of a wide variety of agricultural products, in a separate section. Approximately twelve hundred new headings have been added to this new edition, many of them descriptive of goods not previously made in Canada, and, despite the trying times of the past two years, the Index includes for the first time the names of over two thousand new manufacturing firms, the total now reaching 10,600."

The book also contains a list of the Canadian Trade Commissioners and British Consuls. The produce export section gives an extended list of exporters of fruits, dairy products, live stock, eggs, poultry, fish, grain, hay, potatoes and seeds. It is not a complete list, but of much value. There is also a list of forty leading industries, showing cost of materials and gross value. The Trade Index is a very comprehensive book of nearly 900 pages, and should prove of great value in connection with the extension of Canadian trade. It is supplemented by the services of the Commercial Intelligence Department of the Association, which maintains a monthly revision of information schedules for the benefit of all enquirers.

### FUEL Economy

You'll use less coal if you install a Fawcett Pipeless Furnace, yet your home will be comfortably warm all winter.

Ask the Fawcett man near you. He'll give you full particulars.

There's a Fawcett furnace, stove, heater or range for every need.

Pipeless Furnaces  
J. R. WILSON, Limited,  
17 and 19 Sydney Street, St. John.

## HOT SPRINGS MAY HEAT WHOLE OF ICELAND?

Plan Is to Pipe Hot Water a Mile Into Buildings of Reykjavik.

Bergen, Norway, Sept. 11.—Iceland authorities are considering utilizing the natural hot springs and geysers for heating the whole country. The famous geysers are situated about a mile from Reykjavik, the capital city, and have long been used by Reykjavik housewives as a free laundry and hot water supply.

According to the preliminary plans, the waters from the springs will be brought into the city through wooden pipes and piped into the buildings. The waters from the geysers and springs are both sulphurous and radio-active, and it is the hope of the city fathers that some future time may see the establishment of a medical spa in the Arctic. The wash houses which now surround the geysers are used by the inhabitants as baths and laundries and are entirely heated by the hot water.

## Montreal Reduces Infant Mortality

Dr. Boucher Says Pasteurization of All Milk Will Further Help.

(Montreal Star.)

A steady decrease in the number of children who die under one year of age is recorded in the figures for the current year as compared with that of previous years, according to the return prepared by Dr. S. Boucher, Director of Public Health, dealing with infantile mortality. For the four weeks from August 4 to September 1 there were 220 deaths of children under one year of age, as compared with 258 for the corresponding period of last year, 216 for August 1921 and 404 for August 1920. The total deaths of infants since the beginning of this year to the end of August was 1,487, while for the same period last year it was 1,608, in 1921 it was 1,844 and in 1920 it was 2,438, so that, taking the figures for the eight months, there was a decrease of 116 last year, 214 over 1921 figures and 941 less than 1920 for the same period.

Dr. Boucher expressed satisfaction at the steady decline in infantile mortality in the city but said the health authorities would not be satisfied until the mortality had been brought down to 10 per cent of births. Last year it was 15.9 per cent, so there was still much to be done in educating mothers in the care of their children. In 1918 the infantile mortality rate was 21.5 per cent, so there was some encouragement, but he was convinced they would not gain success until mothers were willing to nurse their children. The majority of them could do so but were not doing so. The campaign of education among mothers was being steadily carried on, and this, coupled with the pasteurization of all milk consumed in the city of Montreal, which he had often recommended and still believed in the interests of health, would steadily decrease the number of children who died before reaching the age of twelve months.

## Mustard tops off the meal

However good the beef, the mutton, the ham, the sausages at lunch or dinner, the meal falls short of perfection unless you add the saving touch of mustard. Mustard brings out the flavor, aids digestion, and adds a pleasant zest, all its own.

## Tomorrow Will Be 50th Anniversary Of Typewriter

Was Invented in 1873 and First Made in Iilon, N. Y.

On September 12 of this year the typewriter will be fifty years old and the event will be fittingly commemorated at its birth-place, Iilon, Herkimer County, N. Y., by a celebration attended by notable personages from all over the country. One feature of this celebration will be the unveiling of a memorial to the inventor of the writing machine.

"The inventor of the typewriter? Who was he?" This is the question that most people will be likely to ask. By the same token, if this anniversary celebration is to be a useful purpose, it is the duty of the public to know the name of this great inventor, Christopher Latham Sholes, for his present obscurity it will have served a useful purpose. But the fiftieth anniversary of the birth of the typewriter is deserving of world-wide commemoration on other grounds, for it is hard to name any other invention of modern times which has played so commanding a role in the shaping of business destiny. The same may be said of social destiny also, for it was the typewriter which opened to women the doors of business life and thus enabled them to achieve economic independence, which was a real precursor of complete sex emancipation.

Considering the magnitude of the service that the typewriter has rendered to the modern world, it is surprising how little has ever been printed concerning its history. In this connection the Herkimer County (New York) Historical Society which is conducting all of the arrangements for the fiftieth Anniversary celebration has rendered an important service by publishing an illustrated book entitled, "The

Story of the Typewriter," which contains in compact form all of the essential facts in the history of this great invention.

It seems that the first man to conceive of the idea of mechanical writing, so far as historical records show, was Henry Mill, a British engineer who flourished in the reign of Good Queen Anne. His patent bears the date of 1714, but he never built even one machine, so far as we know, nor did anyone else for a period of more than 100 years thereafter.

The first American patent was taken out by William Austin Burt of Detroit, afterwards better known as the inventor of the Burt compass. After Burt's attempts became more numerous, including Projansky's in 1833, Thurber's in 1843, Eddy's in 1850, Beach's in 1856 and at least a dozen others during the following ten years. The need for some means for more rapid writing had been constantly growing and every year more men were turning to mechanical means for giving serious thought to the problem, but all of these early machines were too slow for practical use.

First One Is Made.

The first practical typewriter was the invention of two residents of Iilon, Christopher Latham Sholes and Carlos Glidden who began their invention labors in 1867, but it was six years before they were able to produce a machine which was deemed sufficiently perfected for manufacture. In the meantime an interest in the enterprise had been purchased by James Densmore, a practical man whose confidence in the future of the machine was unbounded, and it was his invincible faith which encouraged Sholes to persevere in his enterprise. Early in 1873 Densmore brought the inventor's model to the gun works of E. Remington & Sons, at Iilon, N. Y., and succeeded in persuading the Remingtons to undertake its manufacture. The actual manufacture began on September 12th of the same year, the fiftieth anniversary of which date is to be commemorated in the approaching celebration. The first completed machines were ready for sale early in the following year.

The new machine, however, had a long road to travel before the world became convinced that it was a real necessity in modern business. Mark Twain, one of the first purchasers, called it a "curiously breeding little joker." The average person objected to the idea of paying \$125 for a writing implement when pens could be bought for a penny, and to convince the world that the new invention was worth its price as a time and labor saver was a toilsome work of education. There were no trained operators or any systematic means for training them, for the commercial school, as we know it today, was a later creation of the writing machine. In spite of these

## BAD PATCH OF ECZEMA ON CHIN

In Rash, Itched and Burned. Cuticura Healed.

"I had a very bad patch of eczema on my chin. It broke out in a rash and was very troublesome, itching and burning a great deal. I lost my rest at night on account of the irritation, and my face was disfigured for the time."

"I tried many different remedies without success. I began using Cuticura Soap and Ointment, which brought relief right away, and after using two cakes of Cuticura Soap and two boxes of Cuticura Ointment I was completely healed." (Signed) Miss Mary Campbell, Big Pond Centre, Nova Scotia.

Use Cuticura Soap, Ointment and Talcum exclusively for every-day toilet purposes.

Sample Each Free by Mail. Address: "Cuticura," Dept. 514, St. Paul, Minn. Sold every-where.

Cuticura Soap shaves without using a razor.

Story of the Typewriter," which contains in compact form all of the essential facts in the history of this great invention.

It seems that the first man to conceive of the idea of mechanical writing, so far as historical records show, was Henry Mill, a British engineer who flourished in the reign of Good Queen Anne. His patent bears the date of 1714, but he never built even one machine, so far as we know, nor did anyone else for a period of more than 100 years thereafter.

The first American patent was taken out by William Austin Burt of Detroit, afterwards better known as the inventor of the Burt compass. After Burt's attempts became more numerous, including Projansky's in 1833, Thurber's in 1843, Eddy's in 1850, Beach's in 1856 and at least a dozen others during the following ten years. The need for some means for more rapid writing had been constantly growing and every year more men were turning to mechanical means for giving serious thought to the problem, but all of these early machines were too slow for practical use.

First One Is Made.

The first practical typewriter was the invention of two residents of Iilon, Christopher Latham Sholes and Carlos Glidden who began their invention labors in 1867, but it was six years before they were able to produce a machine which was deemed sufficiently perfected for manufacture. In the meantime an interest in the enterprise had been purchased by James Densmore, a practical man whose confidence in the future of the machine was unbounded, and it was his invincible faith which encouraged Sholes to persevere in his enterprise. Early in 1873 Densmore brought the inventor's model to the gun works of E. Remington & Sons, at Iilon, N. Y., and succeeded in persuading the Remingtons to undertake its manufacture. The actual manufacture began on September 12th of the same year, the fiftieth anniversary of which date is to be commemorated in the approaching celebration. The first completed machines were ready for sale early in the following year.

The new machine, however, had a long road to travel before the world became convinced that it was a real necessity in modern business. Mark Twain, one of the first purchasers, called it a "curiously breeding little joker." The average person objected to the idea of paying \$125 for a writing implement when pens could be bought for a penny, and to convince the world that the new invention was worth its price as a time and labor saver was a toilsome work of education. There were no trained operators or any systematic means for training them, for the commercial school, as we know it today, was a later creation of the writing machine. In spite of these

early obstacles the typewriter ultimately triumphed and this triumph was largely due to conditions created by the machine itself, for it soon became evident that the typewriter not only saved business time but stimulated every form of business activity.

### Great Expansion.

Today the use of the typewriter is all but universal. It is employed for every conceivable kind of writing, including not only correspondence, but form, tabular and statistical work. The typewriter accounting machines are also used for every variety of combined writing and adding. The latter day use of the typewriter has transcended the business field and the portable typewriters have attained an equal popularity with the personal user.

Geographically the employment of the typewriter is just as extensive, for it is in every day use for the writing of over one hundred languages, and is a familiar sight in every corner of the civilized world. Everywhere and for every purpose where thought is recorded in written language it has made itself indispensable to human needs.

As truly as Abraham Lincoln struck the shackles from the negro slaves, so truly did Sholes emancipate both business and womanhood from their former limitations. This two-fold service ren-

dered by the writing machine will be recognized in the order of ceremonies planned for the typewriter jubilee on September 12. In the morning exercises prominent men will tell of the revolution wrought by the writing machine in all business activities. The afternoon ceremonies, however, will centre around the unveiling of the Sholes memorial, and at this unveiling prominent women will pay tribute to the service rendered by his invention in making possible the economic independence enjoyed today by the women of our own and other countries.

### MYSTERY SURROUNDS BABY DESERTED IN PEKING STREET

Peking, Sept. 10.—Attracted by the walling of an infant, a pedestrian turned aside into a cemetery outside Hsichimen, one of the principal western gates of Peking, and found a new-born child wrapped in red silk and with a silken cord about its neck.

An envelope attached to the cord contained \$200 in cash and a note asking the finder to use the money for the care of the youngster. The finder was further instructed to appear at a certain place, Wofian, on July 15, three years hence, when, the note said, he would meet with good fortune.

## Kellogg's Bran is prepared to do one thing—AND DO IT WELL!

Kellogg's Bran will permanently relieve constipation, mild or chronic. It is scientifically prepared for that purpose. It is ALL BRAN, therefore it has the necessary bulk to assure results. Foods with a small bran content cannot afford permanent relief.

When your physician or friends advise you to eat Kellogg's Bran, you follow on for the purpose of eliminating a dangerous clogging-up and toxic condition of your system. You can't afford to take half-way measures! Think of the lost time and the dangers of illness you are daily dodging!

What you must have is real bran—KELLOGG'S BRAN, and if you will eat it regularly each day you will become a different person within a week or so. Kellogg's Bran, with its natural bulk, sweeps, cleanses and

purifies. It not only gives relief, but it regulates the bowels. Every member of your family should eat it—every day—at least two tablespoonfuls in chronic cases as much with each meal.

Try Kellogg's Bran mixed with a hot cereal, or cook it with hot cereals, adding two tablespoonfuls of Bran for each person. Other popular ways are to sprinkle Kellogg's Bran on hot or cold cereals or to eat it as a cereal with hot milk. You can make delicious bakery products with Kellogg's Bran. Recipes on every package.

Kellogg's Bran is not only nationally sold in grocery stores, but can be had in individual packages in first-class hotels and clubs. Ask for it at your restaurant. Be certain to eat Kellogg's Bran daily for health's sake!

## True Beauty

Is impossible to those who leave film on teeth

Prettier teeth form one great beauty item. And millions now enjoy them. Every day they are combating the dingy coats of film.

This offers you a ten-day test of the method they employ. It is used by dainty people of some 50 nations now. And you will always use it when you once see what it does.

### That cloudy film

The clouds on teeth are due to film—that viscous film you feel. Much of it clings and stays on under old-way brushing. Soon that film discolors, then forms dingy coats which hide the luster of the teeth.

Film also causes most tooth troubles. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay. Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea. Hardly one in fifty, in the old days, escaped these film-caused troubles.

### New-day methods

Dental science has now found two ways to fight that film. One acts to disintegrate the film at all stages of formation. The other removes it without harmful scouring. These methods were proved effective by many careful tests. Then a new-type tooth paste was

created to apply them daily. The name is Pepsodent.

Now that tooth paste is in worldwide use, largely by dental advice. Wherever you go you see the benefits it brings.

### Natural ways

Pepsodent acts in natural, gentle ways. Its effects do not come from harsh grit.

Pepsodent multiplies the alkalinity of the saliva, also its starch digester. One is to neutralize mouth acids, the other to digest starch deposits. These great natural tooth-protecting agents gain manifold power from each use.

Pepsodent will bring you a new conception of what clean teeth mean. Send for this 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth become whiter as the cloudy coats disappear.

Do this for your own sake and your family's sake. Cut out the coupon now.

### Protect the Enamel

Pepsodent disintegrates the film, then removes it with an agent far softer than enamel. Never use a film comb which contains harsh grit.

### 10-Day Tube Free
