

ROSSLAND WEEKLY MINER.

Per Year \$2.50.

ROSSLAND, B. C., THURSDAY, DECEMBER 3, 1903

Eighth Year, Number 57

INDICATE PROGRESS Camp's Outlook Improved by Incidents of the Week.

Output is Likely to In- crease Soon—Milling Activity.

Paramount among the events of the past week in the Rossland camp were the announcement of the exceptionally successful year's work by the Centre Star Mining company and the statement that the White Bear company had placed an order for an Elmore oil process concentrator. That one of Rossland's big mines was able to earn net profits substantially over a quarter of a million dollars is indeed a gratifying commentary on the possibilities of the industry locally and a happy augury for future years during which the same company's operations will be extended by the inauguration of milling operations on a large scale. The Le Roi No. 2 company holds its annual meeting early in December, and it is intimated that at this session the announcement will be made that the past year's mining operations netted over \$100,000 in profits. Then comes the War Eagle's annual meeting, and it is expected that the conditions in respect to the Centre Star's profits will be approximated in the case of the War Eagle. These three companies are safe to be on a dividend paying basis in the course of the year now almost at hand.

An intimation has been given that at an early date important announcements relative to increased activity in connection with two other large properties will be forthcoming. The effect of this will further promote the interests of Rossland and serve to place both properties on a much better basis than they have occupied in the past. Next spring should see marked activity in the section between Rossland and Sophie mountains, and to ensure this activity the residents of Rossland must combine to secure the construction of the wagon road that is absolutely essential to the development of the section. The sum required for the undertaking is comparatively small and Rossland has not received its share of appropriations for wagon roads in the past, both factors that should make the task comparatively easy at this juncture. Until the provincial government is pledged to the construction of the Sophie mountain road the community should not relax its efforts.

The Miner has already referred to the significance of the appointment of an expert one buyer of the force of the Northport smelter. Manager Parish confirms. The Miner's statement in so far as it referred to increased activity in the customs department of the smelter's business. The natural deduction is that the smelter proposes to make business for itself, and the Rossland camp affords a splendid field for such operations. Half a dozen mines could be placed on the shipping list today if the facts were only presented properly before the people controlling the properties. It has to be demonstrated to these interests that conditions in respect to mining have altered radically in the past four years, with the result that the scope of successful and profitable mining now applies to ore of considerably lower grade than was then the case. Of course it is a matter of common knowledge that one of Rossland's mines ever lacked ore—the difficulty has been in past years that the grade of the product was not sufficiently above the figure required to pay costs. Since then costs have been whittled down, and many of these properties could now earn dividends, especially in view of the fact that large amounts of dead work have already been done. Interest in concentration is still strong. Discussing the Le Roi Two works, Manager Conduley says: "The plant has only been running for three and a half weeks, and consequently it is impossible to arrive at any accurate idea of the cost and results, but I shall be very much disappointed if it is not profitable even on the present small, I might almost say experimental, scale, on which we are operating. During the three weeks we have been running the plant two shifts of men have been at work, and it was, of course, our intention to keep it in continuous operation, but several slight breakdowns have resulted in temporary shutdowns. Shutdowns always play havoc with cost of operations, even the stoppage of twenty-four hours will materially raise the average for the month, consequently the first showing may not be so good as we had a right to expect. Already we have treated about 500 tons, but so far have shipped none of the concentrates. I expect to make the first shipment on the stoppage of twenty-four hours. The process has proved a complete success. Practically all the mineral is saved, the tailings running on an average about 13 cents to 25 cents a ton. The cost, I should judge, will run about \$2 to the ton when the plant is in good running shape, and as the ore now being treated is from \$3.60 to \$6 ore, this leaves a good margin. When the size of the plant is increased and the ratio

of labor to product reduced the cost of treatment per ton will also be materially reduced."

At the Rossland Power company's mill excellent progress has been made with the construction of the main buildings, and it is now practically assured that the plant will not be delayed on the score of weather conditions.

The shipments for the past week were slightly below those of the previous seven days, this being due in large measure to the unfavorable condition of the roads following the sharp thaw.

THE OUTPUT.

Shipments from the Rossland camp for the week ending November 23 and for the year to date are as follows:

Week	Year
Le Roi No. 1	4740
Centre Star	1380
War Eagle	1140
Le Roi No. 2	290
Le Roi No. 2 (milled)	350
Jumbo	120
Spitzee	420
X. L. (milled)	240
Kootenay	678
Giant	830
Iron Horse	40
Velvet	376
White Bear	497
O. K.	25
Homestake	90
Totals	8260

AMONG THE MINES.

WAR EAGLE.—It was reported during the week that an exceptionally strong body of shipping ore was opened up on the 400 level of the mine, but the statement is not officially confirmed. In view of the exceptionally satisfactory nature of the report on the Centre Star's operations for the past year that of the War Eagle is awaited with keen interest. Pending the commencement of milling operations at the Rossland Power company's plant the operations at the mine will be continued along the lines now in force. Thereafter the extraction of milling ores will very substantially increase the production of the property.

WHITE BEAR.—The exploration of the ore body on the 1000 level has been continued during the week with reported satisfactory results. On the surface the finishing touches to the headworks structure have been put on, and the trestle and grade for the siding from the Spokane Falls & Northern advanced. The steel for the spur is not on the ground as yet, but this is expected to hand almost daily. Shipments of hoisting and compressor plant are understood to be in transit to Rossland. The company expects to ship ore as soon as the new machinery is installed. Manager Warren is expected in Rossland at an early date.

LE ROI.—Nothing of a special nature is reported from the Le Roi for the week just ended. Interest naturally centres about the development work in the deep levels, and it is reported that the showing on the 1350 level is improving quite satisfactorily.

LE ROI TWO.—Mining operations were carried ahead steadily during the week, and the ore bodies on the various levels have been proved consistently. No developments of a special nature are reported.

SPITZEE.—During the week the main shaft was taken down almost to the 200 level, and it is expected that a couple of days longer will suffice to accomplish this depth. Thereafter a station will be cut and drifts started to undercut the ore bodies proved on the first level. No ore was shipped from the mine during the week, but steps were taken to open a new stoppage on the first level.

JUMBO.—The week's operations at the Jumbo were of a most satisfactory nature. In addition to the usual stoppage on the first level, development was continued on the second intermediate. A connection was made in the intermediate with the point where the mine from the No. 1 is to intersect, and the sinking has given place to upraising for obvious reasons. The showing continues to be excellent.

CENTRE STAR.—Matters are reported as without special change during the past week at the Centre Star mine. Stopping and development has been continued as usual.

KOOTENAY.—Stopping on the third, fourth and intermediate levels was continued, together with development in the deeper levels. Shipments were reduced slightly because of the partial breaking up of the wagon road following the thaw.

X. L.—As noted elsewhere in this issue, mining operations are to be resumed immediately at the X. L. mine under the new Craven-Pringle lease. About ten men will be employed on the start.

BOUNDARY SHIPMENTS.

Shipments from the Boundary mines for the past week and year to date were as follows:

Week	Total
Granby	10,831
Mother Lode	3,168
Snowshoe	1,650
Emma	627
B. C.	19,865
Sunset	330
Oro Denoro	792
Athelstan	270
Morrison	3,393
Winnipeg	2,435
Providence	910
Eikhorn	218
Totals	17,688

AMERICAN BEER WON.

PRAGUE, Bohemia, Dec. 1.—The Imperial scientific station investigating the different kinds of beer of the world has awarded the highest honor for superiority to an American product.

General News Of the Kootenay

THE SLOCAN.

The zinc plant at the Payne is working admirably, and is the only one of its kind in Canada.

The recent strike at the Last Chance is showing steady improvement, another car of ore having been shipped from the new vein on Tuesday.

Mrs. Winters and family left Cody Thursday morning for Portland. Seven years ago Cody had a population of 150; today there is one family left.

The following are the ore shipments from Sandon for the week: Ivanhoe, 28 tons; Last Chance, 20 tons; Ruth, 36 tons. Total, 84 tons.

The Payne shipped a number of tons of iron extracted from the zinc by the electric magnetizer to the Trail smelter this week. It is used for fluxing, and being clean is about the best procurable for that purpose. The selling of the iron ore means another source of revenue to the Payne, which until recently was thrown over the dump as waste.

Most gratifying reports are coming from the Hope, one of the Ruth group. The ore body exposed, on which drifting is being done, is proving both rich and extensive. Fogg and McGuigan have a contract of drifting on the workings, which improve as development proceeds.

The Alapo concentrator, which is now being remodelled, is expected to be ready for operation about the first of the new year. At the mine development has been under way some time and large ore shoots have been exposed. Several cars of rich crude ore have been shipped from these veins and many more are in sight. There is also enough of the concentrating quality to keep the mill running an indefinite period, once it is ready. The outlook for the Idaho is of the best. Manager Jenkins is getting everything in shape as soon as possible for extensive operations, and it will not be long before the mine will be one of our largest shippers.

THE LARDEAU.

The McMinville people are pleased with the appearance of their property, and in the spring will again start operations on a larger scale, with the aid of installing machinery as soon as enough work has been accomplished to warrant it.

R. T. Lowery will issue his paper, "The Poplar Creek Nugget," on the 14th of December. James Grier, a veteran newspaper man, will be in charge. A deal has been completed by J. Goldsmith for one-eighth of his interest in the Big Showing on Goat Mountain. The price paid was \$5000, in payments of \$2500 down and \$2500 in June of next year. The purchase was made by eastern parties.

The building of the electric railway up the Duncan will have the effect of opening up and working a large number of A1 properties which for the last two or three years have been practically closed down on account of the lack of transportation.

The sale of the Alpha group, situated on Great Northern hill, to Mr. Seheuster of London, England, winds up the business of the famous Horne-Payne in the Lardeau district. Included in the sale is a plot of 360 acres on the north fork of the Lardeau which could be used for the erection of a suitable plant for concentration.

Sid Graham, foreman at the Mammoth group, states that six men will be steadily employed at this property all winter developing the vein of high grade galena encountered a short time ago, which runs from \$300 to \$730 to the ton.

The Oyster-Criterion stamp mill went into commission on Wednesday, nothing remaining to be done except the joining of the few last links of pipe which carries the water for power. The compressor plant is all completed, and about 40 men will be put on at the mine at once. Four machine drills will be operated.

The surveying corps of J. H. Gray, C. E., that has been surveying for the mono railway up to the west fork of the Duncan from Kootenay lake, has been moved to the south fork of the Kaslo river. Mr. Gray is now busily engaged in necessary estimates for the preliminary cost of the building of the proposed road. The terminus will be at South Fork, where large ore bunkers are to be erected, and gravity handling of the ore will, as far as possible, be utilized for transfer to the Kaslo & Slocan mill road. The length of the line will be about twenty-eight miles and the tonnage already offering will prove a large source of revenue to the investing company without taking into consideration the many promising properties that the road will be the means of opening up and exploiting.

THE BOUNDARY.

An electric plant is being put in at the Providence mine by E. G. Warren for the purpose of lighting, and later, perhaps, for operating drills and hoist.

Shipments from the Athelstan are now being made at the rate of 75 tons daily, the snow making the hauling much easier for the contractors. Two four and two six-horse teams are engaged in this work.

The "Union Jack" floated gallily from the big stack at the B. C. Copper company's smelter on Monday. The last brick was laid on Sunday afternoon, and a rousing cheer was given by the men who had labored for nearly two months in erecting the big flue. Monday the scaffolding was taken down. The stack is 120 feet high, and the inside diameter is 12 feet. There are over 2200 bricks in it.

Lafayette D. Wilbur was instantly killed at the Mother Lode mine. He was a machinist engaged in the machine shop at the time. He and his fellow workmen disregarded the warning from the whistle and remained at work instead of seeking the usual place of safety. A piece of rock weighing about 150 pounds came crashing through the roof of the machine shop and struck Mr. Wilbur on the head, killing him instantly.

Work is progressing on the Standard Fraction on Wallace mountain, west fork of Kettle river. This property, which is the eastern extension of the Rambler, is owned by J. W. Nelson and W. Rambo of Greenwood. At present they are running a tunnel on the Standard Fraction. Mr. Nelson received assay returns from an average sample, which went \$60.44 in silver. The vein is 18 inches wide.

The Winnipeg mine was closed down last week. Financial difficulties were the cause. It is understood that the Bank of Montreal, Rossland, undertook to collect an old account against the mine, and as funds were not available to meet this indebtedness and continue operations, work had to be suspended. It is understood arrangements are being made to pay the men.

EAST KOOTENAY.

Bull river district is looking up. Another big sawmill is projected at Little Bull river.

One hundred and fifty coke ovens are now in operation at Morrissey Mines. The remaining hundred will be completed in the spring.

Several Chinese outfits who have been working in the bed of Wild Horse creek this summer have done well. It is said that the average pay has been about \$5 per man.

Work on the construction of the new coke ovens at Morrissey Mines was stopped last Saturday for the season, owing to unfavorable weather.

It is planned by the Kootenay Perry Creek Mining company to continue exploratory operations on their property all winter. A wire cable is now being extended from the wagon road to camp and will be used in the transportation of supplies and machinery.

Considerable interest has been aroused at Perry creek by the Theis company, who are now engaged in sinking a shaft to reach bedrock. The placer ground in the vicinity of "Old Town" is known to be very rich in yellow gold.

The Crow's Nest Pass Coal company is taking steps which will have a tendency to remove an undesirable class of men from Morrissey mines. It has become a regular thing for a large number of the employes to go on a week's spree after pay-day and as this is a great inconvenience to the company all such men will in future be summarily dismissed. This will lead no doubt to a vast improvement in the quality of the men employed in the mines.

The Fernie jail has been of late terribly overcrowded, the number of prisoners constantly varying from 19 to 25. This is a disgraceful state of affairs, the like of which has rarely existed in modern times. It is crowded with men into the space intended for only a third of that number is an exhibition of inhumanity only credited to the barbarous ages, especially when it is considered that the present wretched condition of the jail renders it unfit for human habitation under any circumstances.

The Crow's Nest Lumber company have a large force of men engaged in logging at the St. Mary's river camp. It is estimated that between four and five million feet of logs will be cut at this camp this winter.

F. Fenwick has received a contract from the Crow's Nest Lumber Company to cut and deliver a million feet of logs, which will be cut on his Kootenay river ranch.

E. J. Cann has also received a contract from the mill company to cut and deliver logs on the bank of the Kootenay river. The space intended for only a third of that number is an exhibition of inhumanity only credited to the barbarous ages, especially when it is considered that the present wretched condition of the jail renders it unfit for human habitation under any circumstances.

A curious robbery case occurred at Michel last Saturday. A miner left \$304 on the table and went up stairs to change his clothes. He was attracted below by a suspicious noise and was in time to see a thief hastening off with the roll of bills. Later with the aid of Constable Henderson search was made in the snow for tracks, and pieces of torn bills were found. The total money consisted of the following denominations: 2 fifties, 3 twenties, 3 tens, 2 fives and two twos. The bills had been in five places each and little difficulty was found in matching the recovered parts, which made up complete bills for 2 fifties, 1 twenty, 1 two and a piece of another two. The money was since redeemed by the bank here. No clue could be found to the thief. He evidently feared that he would be caught and in his excitement tore the bills and flung them to the wind, which scattered them for fifty yards. No trace could be found of the remainder of the bills.

MANY TYPHOID CASES.

BUTLER, Pa., Dec. 1.—The typhoid fever epidemic shows no signs of abatement. One death and five new cases were reported today. Thirty-two nurses arrived from Pittsburgh, Philadelphia, Cleveland and other cities and have been assigned to places and a rousing cheer was given by the men who had labored for nearly two months in erecting the big flue.

A BREAK SOMEWHERE

MANAGER WILSON OF NORTHPORT DENIES REPORT OF SMELTER LOSSES.

SAYS ROSSLAND OFFICE MAN TACKLED PARAGRAPH TO REPORT.

The recent announcement in London by the management of the Le Roi company that additional smelter losses had been discovered on silver and copper is vigorously denied by Manager E. J. Wilson of the Northport smelter, which is owned by the Le Roi company. He said: "You may deny that article seriatim. There have been no special, unexpected or serious losses."

"The official note tacked on to the October cable, telling of the alleged losses, was placed there by the office man in Rossland, for what reason I know not, for it is not exact and is misleading."

"I made up the annual report for the fiscal year ending June 30, 1903, in July last. I attached to it a statement of metal losses in smelting during that year. Never before in the history of this company had any such statement been made up."

"In justice to my predecessor, I will say that the report showed no 'unexpected' or 'serious' losses in either silver or copper during that year—nothing more than would be usually found in smelting ores of the character of the Le Roi ore."

"Beginning with July, the first month of our fiscal year, all our reports have been based on the actual results of our smelting operations, taking into account actual copper and silver losses in smelting."

"The Rossland office, as well as Mr. Waterlow and Mr. McMillan, who were here a month or so ago, have had full knowledge of all results obtained since I took the position of manager of the company in May, 1903."

"The smelter has lost no money and cannot lose any, so long as there is value enough in the Le Roi ore to pay for smelting. The so-called October loss to the Le Roi was due to new development work."

"Since last May I have remodelled the blast furnaces, putting in side feed, new roofs on nearly all the buildings, painted the entire smelter, entirely rebuilt our mechanical roaster, and thoroughly overhauled the smelter from one end to the other."

"All these repairs and changes costing thousands of dollars have been charged up against operating expenses. But in spite of these extraordinary expenses and the large amount of eastern coke, which I was compelled to use to keep in operation, I have reduced the cost of smelting 20 cents per ton of dry ore less than the smelting cost of the year preceding."

"How will the cost of smelting next year be affected by the permanent improvements made this year?"

"The cost will be less."

THE STOCK MARKET

The past week's business shows a small measure of increased activity, chiefly due to the good showing of Centre Star. War Eagle was strong, selling up to 13. Yesterday's sales included one of 5000 Sullivan at 5 1/4 and one of Centre Star at 23. Mountain Lion was also shown some activity, but at a slight decline in price.

MILL FOR WHITE BEAR

COMPANY DECIDED YESTERDAY TO PURCHASE ELMORE OIL PROCESS PLANT.

WILL BE CONSTRUCTED NEAR TRAIL—MANAGER WARREN COMING OUT.

The White Bear Mining company has taken action in the matter of inaugurating concentration in connection with the treatment of its product. Yesterday an order was placed with the Canadian Oil Concentration company for a plant on the Elmore process. Only the bare fact is known here as yet, but it is understood that the company contemplates a fifty-ton plant as a starter, with arrangements for increasing the capacity of the works at a comparatively early date after the efficiency of the system has been established to their satisfaction.

Tests of White Bear ore have been made with the Elmore process and the results secured have been eminently satisfactory. In the case of the Le Roi Two it was found that better results were secured in actual practice than in the experimental tests undertaken before the completion of the present works. This has been the invariable experience with the oil process of milling, and hence the impression that the White Bear's option of enlarging their works will be exercised speedily.

The date for the commencement of construction work on the plant has not been fixed as yet. J. J. Warren, managing director, is expected in Rossland in the course of the next fortnight, and it is understood that part of his mission is to ascertain whether or not construction is practicable during the winter. The company has a dilute and water records staked between Rossland and Trail on the line of the Canadian Pacific railway, and the conditions in respect to snow and frost are radically different at that altitude from those within the city limits proper, so there is a bare possibility that the buildings may be commenced at an early date.

The work on the milling plant is to be commenced forthwith. The plant should be ready for delivery in Rossland in three or four months. At the expiration of this period the weather conditions will be more favorable for construction work and the White Bear concentrator can be proceeded with and the company guaranteed against any delay in respect to the delivery of machinery.

The installation of milling works is in line with the policy demarked by the White Bear company some months ago, when the new headworks now nearing completion were decided upon. It is now well known that much of the White Bear's extensive ore deposit is of milling grade, and that concentration is necessary to its utilization. Various systems of handling this low grade material have been tested, samples being sent to Denver and other reduction centres. The oil process of milling seems to offer the best solution to the problem, hence the company's action yesterday.

REFER TO THE HAGUE. A Proposal in Regard to the Manchurian Question.

WASHINGTON, Dec. 1.—The United States state department may be the means of suggesting a method of settlement of the Manchurian question satisfactorily to all parties by submitting the question as to when and how Russia shall evacuate Manchuria, if at all, to the Hague tribunal.

This proposition has been already broached in Europe, where it has attracted the attention of publicists, and it may be that the U. S. government, as the party interested best situated to urge the plan upon the Russian government, will find itself able to do this.

It is pointed out that this particular question, as it does not involve the Russian national honor, is one which falls distinctly within the list of subjects contemplated by the Hague agreement as proper for arbitration, and as the Russian government always has expressed itself favorable to the settlement of proper international questions by this means, some interest is felt as to whether or not would be given to a proposition by the U. S. government to have the Hague tribunal arbitrate all questions growing out of the treaty of April 8th, 1903, between China and Russia.

NICH ON REBATES. President of A Chicago Company Raked in Many Thousands.

CHICAGO, Dec. 1.—Investigations before Bankruptcy Referee Wean cast some light on the "secret profits" amassed by James S. Watson, while president of the firm of Porter Bros. company, and it is said that railroad representatives are to be called into court to give further information on the same subjects.

Testimony given by George B. Robbins, of Armour & Co., showed that more than \$700,000 had been paid to Mr. Watson in the last six years as rebates on refrigerating charges made by the Fruit Growers' Express company.

Attorney Bach, who is conducting the examination, announced his intention of placing J. Ogden Armour on the stand Thursday to secure additional evidence in the matter and then inquiring into possible rebates made by railroads on transportation tariffs.
