

The J. Stevens & Son Co. Limited

Manufacturers Of Surgical Instruments

145 Wellington Street West TORONTO, CANADA

SURGICAL INSTRUMENTS ARE OF ALL QUALITIES.

This fact is becoming every year more obvious both to the medical man and to the dealer; we cannot therefore too urgently point out that the cheapest is not always the best. In a field open to the competition of the world, as this country now is in this line of goods, there is a possibility of inexperienced dealers being tempted to offer to the consumer the lowest grade of articles produced for the export trade, articles that would not be accepted by the consumer in a more congested market.

Every medical man of experience knows that America is not an extensive producer of goods in this line; particularly is this so in steel articles, the only steel instruments produced of even fairly good quality being extremely expensive. The result being, the European manufacturer, who finds a ready market for his produce if he can meet the great tariffs of North America, has been induced by circumstances and the demands of the dealer to produce an article that he would not readily sell at home.

Now the goods of J. Stevens & Son, of London, are not "Export Goods," and are the same as are sold, and for a long time have held an excellent reputation in a field where the user is most critical. Likewise all articles of continental manufacture are selected by the same long-experienced workers, and are individually examined and inspected in London before being sent to this country; even the commoner German articles, which are very useful and extremely cheap, all pass through the same examination.

N.B.—Steel instruments of high finish and unplated, such as cutting instruments, are liable to tarnish or stain more readily than if covered with nickel plate, and require great care in cleansing after an operation, but there is, we think, no two opinions as to the relative merits of the finely finished uncovered steel in some classes of instruments.

Portable Saline Solution Apparatus.

Dr. Horrock's (Guy's), in compact tin case, \$1.90
In card box, .90
(See London Lancet).

Spencer Wells' English Artery Forceps.

With screw joint, J. S. & S. make, \$1.25 each, \$14 doz.

Saline Solution Apparatus.

Dr. Lane's complete apparatus for injecting saline solution into the blood in cases of severe hemorrhage, - - - \$2.00

Sterilized Sutures.

1. Suture in alcohol, in sealed glass tube, 10 cents.
 3. " " " " 20 "
- Catgut, Silk, Horsehair, or Silk Worm Gut.
