## Indian Co-Ed at College Wears No War Paint

Minnesota. — No scalps, no war whoops, no buckskins or moccasins — just a lot of enjoyable hard work for the first American Indian co-ed in the University.

Modern as any of her white sisters is Lily Rock, Chippewa Indian from Cass Lake, who is enrolled as a freshman in the College of Agriculture, Forestry and Home Economics. The pretty, little, dark-skinned co-ed not only tackles her studies in home economics with vim and vigor, but also makes some of her own clothes when the lessons are over.

"I expected hard work when I started out for the University, and I'm getting it," she confided cheerfully.

"Look at this!" holding up a smock in the throes of construction. "Do you suppose it will ever come around respectably?"

"One thing I did not expect is the friendly interest taken by the upper-classmen in the freshmen. And, I was the first Indian woman to enroll at Minnesota."

Lily offered apologies for absence of buckskin and moccasins. "I think I am a disappointment," she said, laughing. "People expect me to be different, and instead I am just like everyone else. No, I don't live in a tepee, either!"

"Do you remember your grandfather?" was the next question, asked hopefully with fading visions of war paint and dangling scalp.

"No," answered Lily, visibly chuckling and without the slightest interest in grandfathers.

## Dr. Goldschmidt At Moyses Hall Friday

Sommerville Fund Brings Him as Annual Lecturer in Biology

The annual Somerville Lecture will be delivered in Moyses Hall tomorrow. This year's lecturer is Dr. Richard Goldschmidt, of Berlin, who is Director of the Kaiser Wilhelm Institute of Biology.

Dr. Goldschmidt was guest speaker at the Sixth International Conference on Genetics held at Ithaca last August, and has since been in California. He has also lectured in various European and Japanese universities.

At present, Dr. Goldschmidt is seeking a fundamental theory to explain just how and when the infinitesimal units of heredity called genes array themselves to fix the sex of an unborn child. So far his theory is that the sex of the unborn child is determined by a so-called race between chromosomes which are bodies containing both male and female genes, and it is the ration between the two different sexes which decides whether the child shall be a boy or a girl.

Goldschmidt on Heredity is widely read and known in Europe, and it is on this subject that he will lecture at this university. The Somerville Foundation brings a distinguished biologist to McGill every year, and Dr. Goldschmidt is making a special trip to Montreal to deliver this address.

China's first woman barrister, Mrs. Lo Soon Kim Teo, was among the passengers aboard the Empress of Russia, recently sailing from Vancouver. Mrs. Lo obtained her legal training in England and is attached to the Hong Kong bar.

up to and surpassed it. It is also probable that the reason for the cycles of depression and prosperity will be determined and corrective measures taken.

Continuing in the negative strain, C. Dubuc argued that man was appointed to earn his bread by the sweat of his brow but that he has been attempting to earn it at the expense of his neighbour's efforts. Both the workman and the manufacturer are not slaves to the machines they use but rather to the desires of their own comfort.

A. J. Pick adopted an affirmative attitude as he proclaimed the machine to have overpowered its creator as did the monster of Frankenstein. The modern house-wife is as enslaved to her electric conveniences as is her husband to his motor-car. Even the child of today is intrigued by his mechanical toys. Lastly, the depression, a direct outcome of the machine era, shows man as vanquished by his own product.

That the power age has become the real master of man was the opinion of M. Hendrick, who went on to say that the mere existence of machinery is in itself harmless without the guiding force of the technicians behind it. A machine is but a servant and it is more likely that man has become unable to cope with his tool.

In somewhat the same strain J. Burt described the construction of a reservoir at Quebec City, in the course of which man was forced to admit the necessity for the use of machinery. The city of Rome conquered civilization but later was overthrown by this very factor.

Perhaps the most interesting treatment of the subject was that underneath by J. Slapack. Much depends upon the interpretation of the terms: the machine age is our industrialized, mechanized system, and is controlled by a few master minds. The labor unions which have sprung up are resolved to better working conditions and wages. How can these be obtained if man is a slave; yet he has obtained them. The depression is due to maladministration and underconsumption of the people and these conditions are primarily the fault of man.

W. Duckett suggested that man was made to master this earth and it is not likely that he will be controlled by an inanimate construction. N. Keyfitz took the novel attitude that machines are the expressions of man's soul and his desire to conquer his environment.

The Rev. Gordon Burgoine, capable public speaking critic, offered valuable hints to the speakers in criticizing their efforts. Among these he emphasized the need of good stance

and the undesirability of trifling gestures.

Poise is also essential to good speaking as is ending the oration with an important point. The handicap of

nervousness should be overcome at all costs, and the best way to effect this being to practice reading aloud and so accustom one to their own voice.
