Walter Hall, Washington, Ont.

Geo. D. Fletcher, of Green Grove Stock Farm, Binkham, Ont., writes: I have sold my imported Shorthorn bull, Spectator, together with all my young bulls of serviceable age, but have a few choice one- and two-year-old heifers to spare, sired by Imp. Benachie —69954—.

GOSSIP.

MAPLE VILLA OXFORD DOWNS AND YORKSHIRES.

Another visit to the famous Maple Villa Farm of J. A. Cerswell, of Bond Head, Ont., and a look over his splendid show flock of Oxford Down sheep and herd of Yorkshire swine, shows the same evidence of his expert care in the matter of selection of breeding animals. Mr. Cerswell is every year making it more evident by his increasing successes at the big shows in competition with all the big breeders, that he is the owner and breeder of one of the best flocks of Oxford Down sheep in Canada, founded, as was the flock, on the best imported stock to be had, regardless of cost, and since headed by the same high-class quality, the flock as it stands, for breed type, size, covering and quality, is all that can be desired. A glance over the flock—headers that have been in use on the flock will have some meaning and interest to intending purchasers, the unbeaten champion, Hampton Hero 4th (imp.); the equally successful champion, Hamtonian 96th (imp.); then came the splendid breeding ram, Sunset (imp.), and after him the Hobbs-bred ram, Hamtonian 222 (imp.). This ram is sire of all the shearings and a few of the lambs. He is a three-shear sheep, weighs 400 lbs., and is covered to the ground, and a sire of show-ring quality. Mr. Cerswell last fall bought a newly-imported lamb, Oldington Duke, bred by E. Ridley, Salop, Eng. The majority of this year's crop of lambs are sired by him, and having no use for the two rams, Hamtonian 222 is for sale, as are this year's crop of lambs of both sexes, as well as a number of shearing ewes. Parties looking for show material, or flock-header, or flock foundation of the best quality of the breed should see Mr. Cerswell's offering. The farm is easily reached from Bradford, G. T. R., on the east, or Beeton, G. T. R. and C. P. R. on the west, and is also connected with long-distance 'phone from Beeton or Bradford. The large herd of Yorkshires need no further recommending than to say that the breeding stock is practically all of the renowned Summerhill breeding of D. C. Platt & Son, the world's greatest Yorkshire herd. For sale are both sexes, of all ages. A special offering for this fall are a number of young sows bred. Write Mr. Cerswell to Bond Head P. O., Ont.

QUESTIONS AND ANSWERS.
Miscellaneous.

BLUE WEED.

I am sending you a weed that has pretty well covered my pasture field.

1. Will sheep eat this weed?
2. What is the best way to get rid of it?
3. Are there no laws about the destroying of weeds along highways? If so, why are they not enforced?

J. S. K.

Ans.—1. The specimen sent is blue weed, sometimes called viper's bugloss, blue thistle, or blue devil. It is an abundant, coarse-growing weed, giving trouble in pasture lands that cannot be brought under cultivation, and in crops, on land not worked under a regular rotation of crops with a thorough cultivation. Sheep are not fond of this weed, and it gives trouble in some sheep pastures by matting the wool. We are not sure whether or not they will eat it at all, but owing to its very rough, hispid, coarse nature, it is very improbable that they would destroy it unless driven to eat it by the scarcity of other feed.

2. Continued close cutting from year to year when the plant is in early bloom, will suppress it in waste places and pastures. Spudding below the crown of the root will kill it. The seeds may lay in the ground from three to five years, so that it is necessary to prevent seeding at least for three years. If possible, plow the field. The weed will soon succumb to cultivation.

3. There are laws covering this matter, but they are not always enforced as they should be.

What Is Soil Fertility?
How Does It Interest You?

WHAT is soil fertility? Why is its lack considered so serious a matter? Why is it that authorities on better farming agree in considering it one of the most important questions requiring solution by farmers today?

The answer is found in the small average yield of farms in this country as compared with those of other countries where correct fertilizing is practiced, and in the rapidly decreasing quantity of available new land. There are two things that every farmer can do, both of which will make his farm more productive. One is to practice a proper rotation of crops; the other to buy and use an

I H C Manure Spreader
Corn King or Cloverleaf

Every farm can be benefited by the use of an I H C manure spreader. It will distribute the manure in an even coat, light or heavy, as may be required. Manure spread in this manner does the most good to the soil at about half the expense and much less than half the work of hand spreading.

An I H C manure spreader is a scientific machine, built to accomplish a definite purpose in the most economical manner. It is constructed according to a well-thought-out plan, which insures the best work in the field with the least strain on machine or horses. To take one example of the thoroughness in detail, all I H C spreaders are so constructed that a reach is unnecessary. This construction allows the spreader to be managed handily in small feed lots, backed up to barn doors opening into narrow yards, or turned completely in its own length. Yet the absence of a reach in no way interferes with the strength or field efficiency of the machines.

See the I H C local agent or write the nearest branch house for catalogues and information.
