

THE EYE GLASS

An Optical Illusion

WILL someone with "perfect" vision kindly step forward and tell us which of the above horizontal lines is longest. Quick, now, A or B, which? After deciding in your own mind, measure each line and see.

Save your eyesight! At the first sign of any eye weakness, call and let us make a careful scientific examination.

Parents should see to it that their children do not strain their eyes over their lessons or while reading.

A Convenience for Every Occasion

PEOPLE who require double vision glasses will find our Invisible Bifocals a great convenience because they give perfect near and far vision without the usual blur. They have no age-revealing lines, seams or shoulders like the old-fashioned bifocals,

'This Part for Far View'

'This Part for Near View'

but are ground out of one piece of crystal and can not be distinguished from single vision lenses.

Why fuss with two pairs of glasses when you can have perfect vision for both reading and distance with one pair of our Invisible Bifocals?

Call and let us fit you with a pair of these wonderfully convenient glasses to-day.

"I saw it" is not always conclusive evidence that you saw it **correctly**.

MR. I. C. WELL says:—

John D. would give a million dollars for a new stomach, but he has fairly good eyesight. He regards the eyes as his most valued possession. He knows that should they once fail him, no power on earth could replace them. What are you doing to guard your Eyesight? Have them examined regularly by competent authority. **SAVE YOUR EYES!**
