

Canada and the United Mexican States confirm their willingness to discuss further enrichment to 20% or greater in the isotope uranium-235 in the light of the requirements of either of their respective nuclear energy programs.

2.3 As to reprocessing, Canada has, in some cases, concluded implementing agreements with nuclear partners under which generic and long term consent has been given for reprocessing when this has been necessary to meet the nuclear fuel cycle requirements of those partners.

Canada and the United Mexican States will be prepared to discuss implementing agreements for reprocessing in light of the requirements of either of their respective nuclear energy programs.
