

Oil Rings    Oil Plug    Split Bearing    Steady Pin    Solid Bearing

**TYPE CCL MOTOR BEARINGS AND PARTS**

Suitable recesses in the outside of the bearing housing receive portions of the bearing brackets, so that when the two halves of the bracket are clamped together, the bearings are held secure.

Motors with solid bearing brackets (No. 5 frame and smaller) have bronze bearing bushings. The bearing housing is a part of the bracket, and the bushing is pressed into the housing and held by a steady pin.

**THREE BEARING TYPE CCL MOTOR**
