### Self Feeder for Swine

RE tendency in farm management nowadays is to eliminate labor so far as is commensurate with efficiency. Poultrymen have succeeded largely in this regard, and their business and the hopper system of feeding is being almost universally adopted. Why not apply the same principle to swine raising?

John M. Everard has been testing the self feeding of swine at the Iowa experiment station. He found that when the feed was placed in a self-feeder, swine were more rapid and less wasteful. The amount of feed required to put on a pound of gain. As less labor was required, the cost of raising the swine and the profits were larger.

One of the important truths to be deduced from Prof. Everard's work is that the self-feeding of swine increases their rate of gain and materially reduces their maintenance costs. He emphatically conformed with their proposition," said P. W. Everard, "and the self-feeder has demonstrated its value in raising a gain making and labor saving feeder."

# This Valuable Book FREE

It's not a catalogue but a book of information—brim full of valuable, money-saving facts for the farmer.

It tells how to construct fire-proof, weather-proof, wear-proof buildings and other farm improvements of indestructible concrete—the most economical of all building materials.

It is the same book that has saved time, labor and money for more than 75,000 progressive Canadian farmers. Let it save money for you.
