MAN'S INTERNAL ECONOMY.

Way of Making Photographs of the Bones Inside a Living Human Being-Locating a Bullet th a Living Man's Hand-Other Wonders.

One of the most remarkable of modern discoveries has just been made public by Professor Roentgen of the Wurzburg University. It is a process by which the interior of a living human body may be photographed. The light by means of which this remarkable feat can be achieved will also penerate all organic substances; that is, wood, leather and articles of the same class.

A BULLET IN A LIVING MAN'S HAND.

A BULLET IN A LIVING MAN'S HAND.

Is of wonderful penetrative power. It is thrown upon the subject by means of one of Crooke's tubes. This is a vacuum or air-tight glass - tube, through which an induction (electrical) current passes, and the rays from the interes heat caused by the current. He is strong with the peothrough which an induction teactrical) current passes, and the rays from the intense heat caused by the current, which is known as a radiant heat, are thrown from the tube upon the object it is desired to photograph.

Professor Reentgen has succeeded in rofessor Roentgen has pring several remarkable nega se. One instance is that of a man' tives. One instance is the state of the hand wherein a bullet was imbedded. The photograph shows the bullet just as it is lodged in the wrist, thus reason to state out only be vealing what heretofore could only be learned by probing and the use of the

urgeon's knife. In another case, a purse containing quantity of money, was selected as subject. The heat rays focussed ereon produced a negative showing with wonderful clearness both purse and contents. The human hand in which the bullet is located under this process appears as a skeleton hand, the covering of flesh seeming to have vanished as if by magic. It must be

vanished as if by magic. It must be remembered, too, that this was not the hand of a dead person, but belonged to a living breathing man, the remainder of the arm being so screened and arranged as to be excluded from the focus of the tube-camera.

Perhaps the most notable experiment, however, which illustrated with graphic clearness the eccentric power of the new discovery, was the photograph of a man seated beside a young lady before the photographer in ordinary dress, but whom the negative shows a perfect skeleton. To test the clearness with which the new process would reproduce the skeleton of a living subject, negatives were also taken by the ordinary method. In the first case the spinal vertebrae were reproduced in every detail, forming a ghastly realism.

duced in every detail, forming a smarthy realism.

Again, an ordinary iron weight was placed inside a wooden box one and one-half by three feet. In the picture the weight alone is seen, the box having apparently vanished in air. This latter was considered a crucial test, and demonstrated beyond the possibility of a doubt that only a few of the wonders the new process will accomplish have been learned.

The Crooke tube used is arranged like the lens in an ordinary comera, the induction coil—that is, the wire the induction continues the induction cover which the decrificity passes into the tube-rupning from a small storage battery arranged in the camera, and at the rear of the tube. Then over the end of the tube from which the

ing the operator to focus the rays without difficulty. Thus it wil be seen that the photograph is taken through this heavy cloth, as well as the substance surrounding the object it is desired to reproduce.

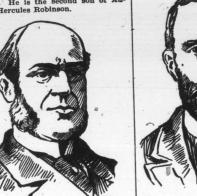

Professor Roentgen has also overturned the scientific theory regarding opaque objects; that is, objects which it is held light will not penetrate. He holds and claims that his newly discovered process will clearly show, even more than now, that there is no such thing as an opaque object. The penecovered process will clearly show, even more than now, that there is no such thing as an opaque object. The penetrating power of light, he claims, is regulated by its intensity and method of use. The Professor further says he is convinced from facts that the discovery has brought to his knowledge concerning heat that the greater uses of heat and electricity are not known yet; that they are capable of vast development. He is now carrying on in secret a series of experiments by which he believes he will soon be able to accomplish even more wonderful feats of photography. sir J. Gordon Sprigg, who succeeds that the disdisk knowledge greater uses re not known the of vast dearrying on inents by which be able to aclerful feats of the succeeding the s

IN THE PUBLIC EYE.

MEN AND TOPICS OF THE TIMES AS THE PUBLIC VIEWS THEM.

sioner of the Cape of Good Hope and His

Now that South Africa is in serious trouble, it is by no means improbable that one man in that country will be called upon to re-arrange matters. This man is Sir Hercules Robinson, ex-Governor of Cape Colony, and now Chief Commissioner of the Cape of Good Hope. Sir Hercules is a tried hand at settling disputes in the colonies of the Mother Country, and his success as a diplomat and agent in such matters during the past 36 years has won every possible honor from the Crown. In 1890, recognizing his great service as a preserver of British power abroad, the Queen made him a baronet. He was appointed to his present position in 1895. He is the second son of Admiral Hercules Robinson.

SIR HERCULES ROBINSON.

Sir Hercules Robinson was born in 1824, and was educated at the Royal Military College, Sandhurst. He was commissioned in the 87th Fusillers, but retired in 1846 to enter the civil service in Ireland. Since that time he has served in various gubernatorial capacities in the colonies; and always with the best success from the English point of view. He was made President of Monserrat in 1854, Lleutenant-Governor of St. Christophers in 1855, and Governor of Hong Kong In 1859. In 1865 he was Governor of Ceylon and in 1872 Governor of New South Wales. Two years later he was sent to the Fiji Jislands to settle the dispute between the native power and the British Government. He secured the unconditional cession of the islands, annexed them to the Empire and raised the of the many questions of local administration which have arisen at the Cape. Although this opportunist course has led his abilites to be underated by many, it has given him a reputation for conservatism which will go far to appease the anger of the Dutch and reassure the people at home in England. Indeed, the Dutch cannot but remember that he was identified with the Afrikander movement, which led to the establishment of the Orange Free State and the South African Republic. He and the South African Republic. is a valuable administrator.

The movement in favor of cremation as against earth burial is growing in England. The other day Mr. William Rathbone, ex-M.P., stated in public that he had made provision for cremation in his own case, on principle, and with a view to promotings the reform. At this moment a new crematorium is almost ready for use at Liverpool, says the Westminster Gazette. It is a neat building of red sandstone, simple and chaste in design. The main door opens into a small chapel. From this room the coffin will be carried, after the burial service is read, into a small apartment beyond, and then placed upon an iron frame running on wheels and rails ina line with the furnace, and pushed noiselessly into the abode of flames. From the chapel the clergyman, followed by the relatives of the deceased, will ascend a stair on the opposite side from the door by which the coffin has been removed, into a small gallery overlooking the door of the furnace. From this gallery the service prescribed for the grave will be read, and the mourners will take the last look of the coffin as it disappears within the furnace. The situation of the crematorium at Anfield is wisely chosen, being in the heart of a pretty suburban neighborhood and accessible from all parts of the city. There is an office, with a cottage for the caretaker attached, at the entrance gate. The crematorium will be opened for public use not later than The movement in favor of crem ernment. He secured the uncommettonal cession of the islands, annexed them to the Empire and raised the Union Jack there. In 1878 he was made Governor of New Zealand, and in 1880 Governor of the Cape of Good Hôpe. In 1881 he settled the affairs of the Transvaal; but not with such brilliant success as attended his other efforts. In 1885 he was appointed Governor of British Bechuanaland, and a year later was the commissioner who examined his present place as successor to Sir Henry Loch. If Sir Hercules amicably settles the present row in the Trans-vaal he will have achieved the great-est of his many trials in diplomacy.

First Spoke of "Emerald Isle. The words "Emerald Isle," as applied to Ireland, were first used by a Dr. Drenigan, in a poem entitled ple and enjoys a high reputation for integrity. M. Loubet is between 45 and 50 years old, and as he is in full physical vigor, hopes to live for greater honors. He has already filled the positions of Prime Minister, Minister of the Interior and Minister of the Public Works. No scandal has attached to his administration of any office.

M. EMILE LOUBET.

ICE BRIDGE AT NIAGARA,

CAPE'S NEW PREMIER.

Sir J. Gordon Sprigg Who Succeeds to Cecil Bhodes' Office.

A certain man hired a valet, and the very first morning sent him to a close to fetch a pair of shoes. The valet returned presently two shoes.
"Stupid!" said the master. "Thes are two rights. Look at them!"

The valet took the shoes and went back to the closet. After a few moments he came back with the same

Niagara has donned her winter dress and is now radiantly beautiful in winter's grasp. On Tuesday morning, Jan. The valet took the shoes and went back to the closet. After a few moments he came back with the same shoes, and said:

"I'm sorrly, sir, but the other pair in thread to the falls, and on Tuesday night the flow of ice was such as to strengthen it at all points, so that there is every prospect that the ley structure, which commands intense admiration, will remain for an extended period.

The valet took the shoes and went back to the closet. After a few moments he came back with the same shoes, and said:

"I'm sorrly, sir, but the other pair in thread to the firs."

This is matched by the experience of a lady with her new maid.

"Mary," she said to the firs."

This is matched by the experience of a lady with her new maid.

"Mary," she said to the girl. "take this tapeline and measure the wilth of your room. I am going to give you a new carpet."

In a few minutes the girl came down.

new carpet."

In a few minutes the girl came down.
"I'm sorry, sir, but the other pair in
cen't measure the room."
"Why not?"
"Why not?" miratism, will remain for an extended period.

The first to cross the bridge of 1896 were two young men named Rickert and a man named Franklin. It was Wednesday afternoon that they made the trip, and they reported the bridge very rough.

The present bridge formed about or week earlier than the majority oother structures of its kind. In 1893 this record was beaten by four days, the ice bridge of that year having formed on Jan. 3. Jack McCoy was the first to cross it, but he returned to the structure of the structure of the proposed of the structure of the proposed of the structure of the structu

Parrot (Student of Evolution)—Great Scott! is that what we come to!—St.

Paul's. Confined to His Notes.

The disadvantage under which a preacher is put by being very closely confined to his notes was never better hit off than by the Main minister's story of a brother parson who read that something or other "flourishes like a green bay"—when he stopped, eyed the written page for a moment, and added, "tree it ought to be, but horse it is."—Boston Herald. Confined to His Notes,

CANADA'S BUDGET.

carried on board of the vessel which bore him from his native land he little thought that he would be premier of the new country to which he was being conveyed. In fact, he has been three times premier, being first chosen in 1978 and serving until 1881, and then again from 1888 to 1890. From 1894 to 1886, and again from 1890 until his recent appointment as successor to Sir Ceoil Rhodes, Sir Gordon was Treasurer of the colony. The circumstances HE ESTIMATED REVENUE FOR 1896 IS THIRTY-SEVEN MILLIONS.

Women singers are to be exclude from the Roman Catholic church choir in Paris. Cecil Rhodes, Sir Gordon was Treasurer of the colony. The circumstances upon which he first gained the post were similar to those upon which he new returns to power. In 1878 Sir Bartle Frere dismissed the Ministry because of his dissatisfaction with the conduct of the Transkelan rebellion. Three years later he resigned, after a fiance, in regard to another rebellion, that of the Easutos. Sir Gordon's appointment may be regarded as a sopphrown to the Dutch. He has always been a moderate, opposing most of the visionary schemes of Cecil Rhodes and his associates, although he has never been a violent partisan. On any side

Richard's Reply to Mr. Foster.

The annual budget statement was delivered by Mr. Foster in the House of Commons on Friday afternoon. Mr. Foster reminded the House that, last year, delivering the budget as he did on May 1, he was better enabled to speak as to the financial results of the year. He had estimated the revenue for the year at \$33,800,000, believing that there would be a betterment between April 20 and June 30, over the corresponding period the preceding year, of \$419,724. The whole falling off in the revenue last year was \$3,396,663. The exports exceeded the imports by \$2,857. revenue last year was \$3,396,563. The exports exceeded the imports by \$2,587,\$21, such an occurrence having taken place only once before since Confederation. Whatever there might be in the balance of trade theory, the fact that the exports exceeded the imports was so much gain to the business interests of the country.

Mr. Foster said the total revenue was the smallest since 1855-86; the customs revenue was the smallest since 1879-80, and smaller by 6,300,000 than it was in 1889-80. The per capita rate of custom collection from 1874-75 to 1877-78 was \$3.35 per head, and last year \$3.55 per head.

ple. The custom collections in 194-195
was \$3.50 per head, and last year \$3.52
per head.

Coming to the expenditure for 1894-95
he had estimated the amount at \$38,
308,000, the actual expenditure being
\$38,132,000, this being one of the largest
the country had had.

The deficit last year was \$4,153,875.
Looking at that deficit it must be remembered that \$2,002,311 was accounted
for by the amount laid up in sinking
fund, so that the real result of last
year's operations, so far as consolidated revenues and expenditures were concerned left a net deficit of \$2,151,564.
The deficit was less by \$350,000 than he
had anticipated. Adding to the deficit
that of the previous year the total
was \$5,844,207. It should be remembered
owever, that last year there was remitted to the people in taxation on
sugar alone \$5,475,000, so that had this
money been collected it would have
wiped out the deficits of the past two
years, and have left a surplus of \$100,000 or \$200,000.

The debt had increased last year
by \$6,891,897, the average increase from
1890 to 1895 being \$2,290,214 per annum.
Dealing with the financial outlook

1890 to 1895 being \$2,290,214 per annum.

Dealing with the financial outlook for the fiscal year, he estimated revenue and expenditure at \$37,000,000, or that they about balance each other. He thought the time for deficits was about over, and the time for surpluses was fast approaching.

The Minister closed his address by speaking of the immense possibilities of Canada and the empire, and showed of what the Dominion was capable in reproducing food for the Mother Land. Mr. Foster spoke two hours and ten minutes.

ten minutes.

SIR RICHARD'S REPLY.

After recess, Sir Richard Cartwright began his speech. He denied that exports showed any really appreciable increase. Most of the exports were of articles such as wooden goods, which, he held, should met be placed to the credit of the Government in a country so especially favorably situated with respect to these goods as Canada was. Canada last year exported \$1,000,000 worth of household goods, and these were settlers' effects.

He held that the slow increase in population proved that something was wrong. The soil, the men, and everything eless about Canada itself were good, and therefore, the very bad condition it was in must be due \$3 the possession of a remarkably bad Government.

Bir Richard did not take up the budget speech in detail, but, after speaking one hour moved the adjournment of the debate in order that he might deal further with the subject at the next meeting of the House. ten minutes.
SIR RICHARD'S REPLY.

is wisely chosen, being in the heart of a pretty suburban neighborhood and accessible from all parts of the city. There is an office, with a cottage for the caretaker attached, at the entrance gate. The crematorium will be opened for public use not later than April I.

RROCKVILLE BusinessCollege

It is not what a College promises to do for you, but what it has done for others, that ought to guide you in the selection of a College in which to secure your business training. Send for New Catalogue that you may see what we have done for others. We have seewed the conception of an have secured the co-operation of an Agency in New York that assists materially in locating graduates.

Address C. W. GAY, Principal
Brockville Business College Scientific America

Parties keeping stock for Milk or Butter should use this Feed, as it increases the flow of milk, makes Agency for better butter, and does and does away with all butter coloring.

It is the great Grain-Saver, and is to be used for Horses, Cows, Sheep, For information and free Handbook write to
MUNN & CO., 361 BROADWAY, NEW YORK.
Oldest bureau for securing patents in America
Every patent taken out by us is brought before
the public by a notice given free of charge in the and increases the milk a quart more per day on each cow. It also produces larger quantities of butter. Scientific American
