

THE STAGNANT STREAM.

ENFEEBLED heart action reduces the force of the blood stream. As a consequence insufficient oxygen is absorbed by the circulatory fluid; products of waste accumulate to such an extent that the stream is virtually stagnant and auto-intoxication ensues.

An abundance of oxygen is essential to the complete elimination of waste, the nourishment of tissues, the proper functioning of the organs and the maintenance of a physiological equipoise between destructive and reconstructive processes.

PEPTO-MANGAN (GUDE) imparts to the vial fluid the elements—hemoglobin and red corpuscles—upon which the elimination of waste material and the reception of nutritive factors depend.

PEPTO-MANGAN (GUDE), because of its regenerative action, quick absorption and rapid infusion into the blood, is markedly serviceable in the treatment of the various depletory disorders of the circulating fluid, and, therefore, is of great value in all forms of Anemia, Chlorosis, Bright's Disease, Rachitis, Neurasthenia, Amenorrhea, Dysmenorrhea, etc.

Prescribe PEPTO-MANGAN (GUDE) in original bottles and avoid substitution. *It is never sold in bulk.*

Samples and literature sent upon application.

BACTERIOLOGICAL WALL CHART FOR THE PHYSICIAN'S OFFICE.

One of our scientific, and artistically produced, bacteriological charts in colors, exhibiting 60 different pathogenic micro-organisms, will be mailed free to any regular medical practitioner, upon request, mentioning this journal.

This chart has received the highest praise from leading bacteriologists and pathologists in this and other countries, not only for its scientific accuracy, but for the artistic and skilful manner in which it has been executed. It exhibits more illustrations of the different micro-organisms than can be found in any one text book published.
