# Poisoning of Water by Lead

## Antidotes for Strychnia.

The British Medical Journa says "Prothrough the system for he found that in rabbits poisoned with the sulphate of the alkaloid, on being made to inhale chlorine gass in quantity, such as was not sufficient in itself to kill, the convulsions were re-tarded, and were milder when they occurred; death, also, was less rapid. The author further observed that when strychnia was exhibited with pyrogallic acid, the convul-sion was retarded for the space of half an hour, by comparisons with other experiments in which the alkaloid was given by itself. tarded, and were milder when they occurred; death, also, was less rapid. The author further observed that when strychnia was exhibited with pyrogallic acid, the convul-sion was retarded for the space of half an hoar, by comparisons with other experiments in which the alkaloid was given by itself. Professor Bellini believes that this action symptoms is not dependent on the acid acti-ing chemically on the struchnia better the space of the spac ing chemically on the strychnia, but only through the astringent effects produced by the acid on the mucuous membrane of the stomach, whereby the absorption of the pois-on is more difficult. The same author the state at this day as celebrated as they were at the bellion! Who does the reader think is asdwelling on the frog-test for strychnia, asserts that this test is not to be trustel, inasmuch as other poisons produce the tetanic symptoms, although in a lesser degree.' ----
