

CONCRETE FENCE POSTS

Under the direction of the Secretary of Agriculture for United States, a number of experiments have been undertaken during the past year with a view to determining whether or not a thoroughly practical concrete fence post, reinforced with steel, could be made sufficiently cheap to be used by farmers. The advantages of such fence posts would be many. The price of wood, particularly of the varieties used for fence posts, is continually rising, and even now the price is almost prohibitory in some sections of the country. Further, a properly constructed concrete post would be permanent, as it would neither rot nor undergo disintegration. A variety of methods of reinforcement have been tried, and experiments are still being conducted. The results thus far are said to have been most satisfactory. Experiments of a similar nature are about to be begun on methods for making concrete drains, watering troughs, roofs and barns, with the hope that concrete construction, so rapidly developing in the large cities, can be applied with benefit to the farm.

BUSINESS NOTES.

Cournoyer & Gagne, painters, Montreal, have dissolved.

The death is announced of Patrick Moinough, roofer, Montreal.

Marsan & Robillard, contractors, Montreal, have registered.

The Sanitary Plumbing Co., Granby, Que., has been dissolved.

The dissolution is announced of Mercure & LeBlanc, Delorimier, Montreal.

The Calgary Lime & Cement Company, Calgary, N. W. T., has been incorporated.
