" over £5 and up to £10, 50 cents.

NOVEMBER.—These notes are read all the year round, and therefore although this is not a month for sowing, we shall say a few words about seeding. Of course every farmer knows that different soils in various conditions require different amounts of seed. It is a common mistake to use too much seed of all kinds, but it is also common to see grain and grass mixed growing together, where a little more seed was required. On low river bottoms it is necessary to sow spring grain rather thick, to prevent damage to the crop from rank weeds. Rich, clean land, in good condition, requires very much less seed than a poor soil, poorly prepared or foul with weeds. Excellent results sometimes come of thin seeding, where the conditions are favorable. It will thus be apparent that every farmer should have scientific knowledge of soil differences and conditions, and knowledge from experience of what his own particular farm may require.
