Observations.—1. The nearest time of the Moon's change, the first quarter, full and the last quarter, are to midnight, the fairer will be the weather during the seven days following.

2. The space of this calculation occupies from 10 at night till 2 next morning.

3. The nearer to mid-day or noon the phases of the Moon happen, the more foul or wet weather may be expected during the next seven days.

4. The space of calculation occupies from ten in the forenoon to two in the afternoon. These observations refer principally to the summer, though they affect Spring and Autumn nearly in the same ratio.

5. The Moon's change, first quarter, full, and last quarter, happening during six of the afternoon hours, *i. e.*, from four to ten, may be followed by fair weather.
