

bowl as if it had been produced in a machine. The stem is a flattened oval—the upper and lower being the compressed sides. The wall of the bowl is no thicker than that of an ordinary clay pipe, and, with the exception of a small chip out of the lip, the specimen is absolutely perfect. Its total length is seven inches. The greater portion of its surface is covered with delicate markings in which many people profess to see a pictograph representing wigwams, fortifications and tallies. This pipe is also made of steatite. It was found on the bank of Lake Moira, or Hog Lake, a few miles from Madoc, and was presented to the museum by Mr. Moon, of that village.

FIG. 21. (4-5 Size).

This pipe (Fig. 21) is also a well finished specimen. It seems to have been modelled from the head of a hawk or eagle. The material is quite black. There is a hole at the back for the insertion of a stem. This specimen was found by Mr Frank Scott, London township, and formed part of Mr. Matheson's collection.

FIG. 22.

Fig 22, from the same collection, was found on the farm of Mr. Thomas Stanley, township of McGillivray. It is of a light, fine grained stone, and has had much labor
