**CO-OPERATION**

**THE RURAL LIFE PROBLEM OF THE U.S.**, by Sir Horace Plunkett. The thoughts contained in this book of 175 pages relate to one side of the life of the United States, which country was to the writer, an Irishman by birth, a second home. The author, who is acknowledged to be one of the most deeply interested, as well as one of the most keenly observant students of American social and economic problems, goes into the question of the Country Life Movement from a point of view derived from thirty years' experiences of the physical contrasts and moral resemblances of the Irish and American rural problems. He deals lucidly with the launching of the two Roosevelt policies, the Conservation of National Resources, and the Need of Reconstruction of Rural Life. He traces the origin and consequences of rural neglect to the Industrial Revolution in England, and points out the danger to national efficiency in sacrificing agricultural to commercial and industrial interests. The book goes on to deal with the inner life of the American farmer, and the weak spot in American rural economy, also Roosevelt's three fundamental elements of a rural existence, "Better Farming," "Better Business," "Better Living," and the way to attain these ends, by means of agriculture on co-operative lines, the necessity for a redirection of rural education, the solving of the rural labor problem, and the betterment of woman's position in farm life. The book concludes with a chapter on the reforms necessary to bring about better farming, better business, better living, and shows that while all three are necessary, better business must come first, and for farmers the way to better living is by co-operation, and what co-operation really is, is what the American farmer has got to learn and this whole book applies to Canadian conditions as well. The book is one which every farmer ought to read. It touches very closely the great social and economic problems which today confront the agricultural population of this great Canadian West.
