Thursday, August 21, 1913

THE QUESTION OF UPBRINGING

It is quite customary to speak of Thaw as a "degenerate," but although this, of course, is largely the case as the world views the matter, the chances are that a faulty upbringing had very much to do with the matter.

Born of millionaire parents, he was, from his earliest youth, coddled with regard to every whim, and it is asserted that he was never denied anything that he desired.

It is small wonder that a lad so circumstanced grew up to man's estate with the idea that whatever he decided must be right, and that to remove anyone objectionable from his path (such as White) was quite a proper proceeding.

Our neighbors are very prone to grow multi-millionaires, and in many cases great wealth comes to families during a lifetime, when neither the parents nor the children have been trained for such a responsibility.

There the sons and daughters of the immensely rich are, in general, taught useful acquirements, and from the inception they are instructed that money and estates are to a large extent a trust.

Whoever heard in the States of the Astors, or the Vanderbilts, or others of that dizzy financial height doing anything of the kind? Thaw, as a man of moderate means, might have made something of his life, but he has been a pampered and stupidly indulged child of fortune, with all that this involves.

LAURIER'S PLAN

A perusal of the speech which Sir Wilfrid Laurier made at St. Hyacinthe can leave no doubt in the minds of intelligent readers that he has decided to try and get a solid Quebec once more on the basis of the race cry.

In fact, he betrayed that intention with an openness which amounted to very little short of effrontery. "I have to say to you that I am a Canadian of French origin like yourselves," was one of his statements.

The intent of such talk is very clear. It is that, as French-Canadians, they should rally to the support of one of their number, without regard to the many other races of this Dominion, or the public needs.

What would be thought of any other public man who sought to secure the support of a Province on the plea of birth?

It couldn't be done in this country anywhere else except in Quebec, and Sir Wilfrid well knows that. He knows he can do it there with impunity and success, because he has done that before, and he calculates that in the English-speaking portions he can still hold the allegiance of his followers despite such a reprehensible design.

Such an inflammable course may be politics, in the very lowest sense of that term, but it is not, in the smallest possible degree, the role of a true statesman.

AS TO TREE-CUTTING

The Exhibitor has a very lachrymose article with reference to the cutting of trees in connection with the installation of the Hydro-Electric system. It says in part:

The vigorous protests which are being made by some residents of Brantford against the mutilation of trees by the men who are paving the way for the inauguration of the Hydro-Electric service here show that our citizens are fully alive to the part which ornamental shade trees play in creating "The City Beautiful."

Toronto Mausoleum

(Continued from Page 1) agreeing to keep the mausoleum open for all time to come. The building is in care of an attendant each day until 6 o'clock. The exterior is of Roman stone and the interior of marble.

Description of Building The mausoleum, as constructed by the Company, is a structure of exceptional beauty and impressive grandeur. The style of architecture for each building conforms with its location. The foundation and superstructure is a monolithic mass of concrete, reinforced throughout with steel.

The concrete outer walls are faced with granite, marble or stone, as desired. The crypts are uniform in size, and are separated by four-inch seamless walls of concrete.

Underneath each row of crypts is a marble ledge, six inches wide, suitable for floral tributes. The interior of each building is finished in the full marble. The entrance is performed by the funeral service. In corridors leading from this chapel, the crypts are grouped in sections, making it possible for an entire family to rest side by side.

Sanitary Features Each crypt is connected with a patented sanitary plant. These plants, which are installed in every mausoleum, consist of a central disinfecting tank of formaldehyde with pipes embedded in concrete radiating to each crypt, through which any gases in the crypt are conveyed to the disinfecting plant and passed through formaldehyde and a cotton cushion, being made absolutely harmless and pure by this process before being discharged through the vent pipe at the top of the building.

Earth Burial The sanitary method of earth burial creates undeniable danger to the living. The necessity of protection against the dead, when interred, has in the past years been anxiously discussed by alienists, hygienists, sanitarians and members of leading medical associations. A recent committee of the American Medical Association made a report to its session in St. Louis, from which we quote: "We believe that the horrid practice of earth burial does more to propagate the germs of disease and death, and to spread desolation and pestilence over the human race, than do all man's ingenuity and ignorance in every other custom or habit. The graveyard must be abandoned. The time has come for us to face squarely the problem—how to dispose of our dead with safety to the living."

The New York Tribune puts the entire situation in that State thus succinctly: "If Sulzer is a campaign fund grafter and a perjurer, he is what Tammany made him. His morals are his morals. In exposing him Tammany is exposing its own foulness. And the public now knows not only what to expect from putting Tammany men in office, but it has had a view of the shameful blackmailing methods and duress by which Tammany controls its men in office. If Tammany had succeeded in blackmailing Sulzer it would never have exposed his alleged criminality. The public now sees Tammany in all its hideousness. However bad Sulzer is, Tammany is worse."

Ontario, in extent of territory, is now the second largest province in the Dominion, extending 1200 miles from east to west, and north from the international boundary for more than 300 miles. It contains an area of 407,263 square miles. In 1911 this Province produced 35 per cent. of the total field crops of Canada, 39 per cent. of the timber, 41 per cent. of the minerals, and 75 per cent. of all the fruits grown in the Dominion. Yet only ten per cent. of Ontario's land has been located, there being 236,000,000 acres still vested in the Crown. Over 85 per cent. of the total area and nearly all the unlocated lands are within the boundaries of new or upper Ontario. It is, and always will remain, the greatest Province.

Notes and Comments

The Toronto World boasts that the credit of that city is "robust." That phrase is in about the same class as the remarks of some that the Lake Erie & Northern Railway would destroy the Grand River front, whereas it will enable all citizens to travel along the beauties of said front, without trespassing on the grounds of the few who had that privilege. It annoyed them, quite naturally, but public needs are always paramount to private interests.

A Canadian youth broke his arm while pitching in a game of baseball. If someone would only break the ill-luck of the Brantford team that would be much more satisfactory hereabouts.

That gentle creature, Sylvia Pankhurst, advises all suffragettes in future to carry canes to all meetings they attend. The outfitting should prove an easy matter, considering the amount they have been raising for some months past.

The people of Toronto got very much excited over a runaway engine dashing through that city at sixty miles. Well, wasn't it the most natural thing in the world for a locomotive to get on a toot?

The Stratford Beacon bewails the fact that Dominion bye-elections soon to be held will be based on votes of constituencies not readjusted since last census. And the same paper was supporting Ross, then Premier of Ontario, when he kept a riding without a member for over a year, because he knew that the Grit candidate could not be elected there, and his majority was too small to be thus endangered.

The New York Tribune puts the entire situation in that State thus succinctly: "If Sulzer is a campaign fund grafter and a perjurer, he is what Tammany made him. His morals are his morals. In exposing him Tammany is exposing its own foulness. And the public now knows not only what to expect from putting Tammany men in office, but it has had a view of the shameful blackmailing methods and duress by which Tammany controls its men in office. It contains an area of 407,263 square miles. In 1911 this Province produced 35 per cent. of the total field crops of Canada, 39 per cent. of the timber, 41 per cent. of the minerals, and 75 per cent. of all the fruits grown in the Dominion. Yet only ten per cent. of Ontario's land has been located, there being 236,000,000 acres still vested in the Crown. Over 85 per cent. of the total area and nearly all the unlocated lands are within the boundaries of new or upper Ontario. It is, and always will remain, the greatest Province.

Ontario, in extent of territory, is now the second largest province in the Dominion, extending 1200 miles from east to west, and north from the international boundary for more than 300 miles. It contains an area of 407,263 square miles. In 1911 this Province produced 35 per cent. of the total field crops of Canada, 39 per cent. of the timber, 41 per cent. of the minerals, and 75 per cent. of all the fruits grown in the Dominion.
