

Children Cry for Fletcher's

CASTORIA

Fletcher's Castoria is strictly a remedy for infants and children. Foods are specially prepared for babies. A baby's medicine is even more essential for baby. Remedies primarily prepared for grown-ups are not interchangeable. It was the need of a remedy for the common ailments of infants and children that brought Castoria before the public after years of research, and no claim has been made for it that its use for over 30 years has not proven.

What is CASTORIA?

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other narcotic substance. Its base is its guarantee. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic and Diarrhoea; allaying Feverishness arising therefrom, and by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep. In Use For Over 30 Years

THE CENTAUR COMPANY, NEW YORK CITY

DOVER, Ohio, Mar. 18—Sixteen-year-old Fern Burris-Bennett, bride of 10 days, has filed suit for divorce against her husband, the Rev. Ezekiel R. Bennett, 47 years old, making startling allegations. The girl wife avers that following a prayer meeting at Bennett's home last March he premeditated upon her to stay all night. He told her she says, that "God sent her to him" and asked her to marry him. She asserts Bennett administered a drug "destroying her will power." While in this state she consented to marry him she says. She remained with her husband one day only. Bennett, ordained a United Brethren minister, left that denomination and became wealthy as a soap manufacturer. He conducts an independent church in Dover, preaching each Sunday.

Pain and expense are the two great fears of Dentistry that account for more ruined teeth than anything else.

These fears encourage neglect, and poor, indeed, will be the condition of your teeth if you neglect them. They MUST have watchful attention to prevent decay, and when decay is present, they must have proper treatment.

It is groundless fear to feel alarmed at the possibility of pain you must suffer or the cost you must pay for Dental treatment at our Offices.

The treatments are practically free from pain and the costs are astonishingly moderate.

Besides this—there is a free consultation and examination service which we extend to all who desire to know the condition of the teeth.

Fillings 50c up. Very good Plates \$8.00.

ABOUT THE SEED DRILL

What is Considered to be the Most Efficient Type.

The Feeding Device is the Heart of the Drill—Seed Should Be Dropped Directly Under the Axle of the Disc—Give the Bearings Careful Inspection.

(Contributed by Ontario Department of Agriculture, Toronto.)

As the drill sows, so shall the farmer reap, is no fallacy. It is as true in its content as the maxim "As a man sows so shall he reap." Given the right kind of a grain drill, the seed is all planted at a uniform depth, evenly covered; the earth compacted just enough to retain the moisture around it. These conditions mean that the young plants will all come up at the same time, that the roots will be well protected, and that the grain will ripen uniformly. As the grain is planted, so will it grow and ripen. If some of the seed is planted too shallow, and some too deep, the seed that comes up first, ripens first. Thus it is that some of the grain is ready to harvest while other patches are still in the milk stage.

The feeding device is the heart of the grain drill. Upon its reliability depends the accuracy of sowing the seed. The drill scale is computed for the average sized seeds, and therefore cannot always be depended upon when the size of them varies from the normal. If the grain is oversized or undersized the required amount per acre may be sown by setting the feed lever at a point slightly greater or slightly less than above the indicator. There are, in common use, two different forms of feeding devices. The fluted-cylinder-force feed, and the double-run-force feed. The amount of seed sown by the fluted-cylinder-force feed may be regulated by a lever which changes the size of the outlet, but it does not always handle all classes of seed without breaking them, as can be done with the double-run-force feed, which necessarily requires for driving it a disc wheel, or a cog wheel with from nine to fifteen sets of cogs that make as many speeds or feeds.

In the most efficient type of grain drills the seed should be deposited as nearly directly under the axle of the disc as possible, as this is the only place where the seed can be dropped directly on to the bottom of the trench without hindrance. By this method the disc is not run deeper than the seed is deposited, thus the draft is reduced to a minimum. If the seed is deposited in the rear of the centre of the axle, the rotation of the disc tends to carry earth and seed up with it, causing the seed to be unevenly deposited. In operation, a properly angled disc opens a trench about two inches wide. The falling seed strikes the concave side of the shield and the convex side of the disc, and is thus scattered evenly over the entire width of the trench.

Grain seed drills are divided into four kinds, according to the type of furrow opener—the open delivery single disc and the closed delivery single disc, the double disc, the shoe and the hoe drills. The open delivery single disc furrow opener deposits the seed between the shield and the convex side of the disc. The space is open from the end of the boot between the disc and shield to the bottom or lower end of the shield. The shield prevents the falling seed from becoming mixed with the loose earth and surface trash and insures its free passage to the bottom of the trench made by the disc. It will also do excellent work in highly cultivated soil that is free from trash.

The closed delivery single-disc furrow opener has a closed boot, similar to a hoe furrow opener, which comes down at the rear edge of the disc and deposits the seed about two inches back of the disc. It does not plant the seed at as even a depth as either the open delivery single disc or the double disc, but deposits it at least eight inches in rear of the disc hub, and wherever it meets with an obstruction, rock or hard frozen soil the disc rises up and carries the boot with it, broadcasting the seed on the surface.

There are many styles of double discs, but the one that plants the seed under or slightly back of the disc axle, or hub, is the one to use, for that point is the deepest part of the furrow. The furrow opener that shoots the grain forward of this centre is to be avoided, for the reason that the seed reaches the ground before the furrow is fully formed, and it is, therefore, mixed with the soil as the seed trench is being made, causing what is termed "wavy" sowing. The double disc type of opener tends to spread out the seed more than other kinds, so that each seed has a somewhat greater area from which to draw moisture.

The hoe furrow opener or shovel opener does not penetrate the ground readily and clogs easier than any of the other types. The shoe opener does no better work, and rather than clog will run over trash and thus plant the seed at varying depths.

In selecting a drill the bearings should be given careful inspection. They should be dust proof. The hard roller must be considered superior to all others for this kind of work, as the oil can be forced into the bearing from the centre, and as it works out it carries all the dirt with it. It should have a well-braced seed box with steel hopper bottom to allow the seed to pass freely into the cups; strong frame and substantial wheels are important features. The distance between the furrow opener varies to some extent but six inches is the usual spacing. The seed tubes may be of rubber or of steel ribbon. The rubber tubes give good satisfaction, but are hot durable if exposed to the weather. The steel ribbon tubes serve the purpose well, and if painted will last as long as the drill.—Jas. Evans, D. A. College, Guelph.

The cold and blustering weather kept the farmers away from the market today and there was a small attendance.

Why?

Proof is positive when founded upon facts plus experience. BEECHAM'S PILLS have been used for 60 years by people all over the globe.

ENTHUSIASM THE SECRET OF ATTAINING A RIPE AGE

CHICAGO, March 18—Those of you who desire to live 100 years should be enthusiastic. Enthusiasm is one of the secrets of longevity treasured by members of the Hundred Year Club. Mrs. D. Harry Hammer, one of the members disclosed this secret in an address at the 80th birthday of another member.

"There is positively no use in giving in to Father Time," she said. "He is a cheat and the way to meet him is to use his own weapons. Just cheat him by refusing to fall into his trap."

"The one thing that will do more than anything else to defeat Time and enable one to live 100 years or longer, is enthusiasm. One should keep his or her interest keenly alert and should always engage in something that is of tremendous interest."

"Enthusiasm makes the blood flow faster, it keeps the mind wide awake and makes one forget the ills and ailments, which if given way to, will break one down in short time. The enthusiastic person will be young at 90 while the person lacking enthusiasm will be old at 20."

"Deadline at Eleven," a newspaper story in which Corinne Griffith is the star, received its first presentation last week at the spacious Broadway Theatre, New York.

OFFICIAL CONFIRMATION OF QUARANTINE LIFTING

NIAGARA FALLS, Ont., Mar. 18—The lifting of the quarantine has been officially confirmed. Mr. Baldwin, Chief of the United States Immigration Department at Niagara Falls, N.Y. was notified this morning that the vaccination restrictions on the border will be officially raised Friday, March 19, at midnight.

PREPAYMENT OF FREIGHT

Hon. F. B. Carvell Makes Suggestion—Which May Be Followed

OTTAWA, March 18—An early decision by the Railway Commission in the complaint of the Canadian shippers against the non-prepayment regulations of the railways, was indicated this morning. Both sides completed their case before the board.

It was intimated at the hearing this morning that the U. S. railroads would probably accept prepayment of freight for export from American ports.

Chief Commissioner Carvell suggested that a compromise might be affected on the situation by fixing the rate of exchange every Monday.

A Canadian shipper going into an ocean would be required to pay a certain percentage of the freight rate in Canadian funds, and the exchange would be added to the remaining percentage. This suggestion appeared to be regarded favorably by some of the shippers.

Frank Crayne has been brought from New York to play an important part in support of Earle Williams in his next feature which will be made on the Pacific Coast.

Party-Line Consideration

A Two-party line is a single circuit, shared in common by two subscribers. It is not reserved for a single user and should be used on the share-and-share-alike basis.

On a two-party line it is impossible for both users to try to talk out on the same circuit at the same time. There is also the liability of both being wanted at the same time to receive incoming calls.

Therefore, there are special considerations which we urge a party-liner user to keep in mind:

- 1. Long conversations prevent the use of the line by the other subscriber, therefore party-line talks should be as brief as possible.
2. Whenever another party-line subscriber requests the use of the line for an emergency, courtesy should be prompt, the first user temporarily to give up the use of the line.
3. Whenever a party-line subscriber takes the receiver from the hook and finds the line in use, the receiver should be replaced at once in a careful manner.
4. At the end of a conversation the receiver should be replaced upon the hook immediately, otherwise the other subscriber cannot signal the central office.
5. Be sure always to give the operator the letters W or J in calling a party-line subscriber

Co-operation is required to ensure good service of any kind.

JOURNAL WANT ADVS. PAY

WE ARE Ford Dealers in this district and have formed an estimate of the number of cars we will require to meet the needs of this territory. We cannot get enough cars to fill that estimate because there are not enough cars being made to fill all dealers' estimates throughout Canada.

The number of cars we can get depends upon the number of orders we send in and the early date at which we send them in, as the Ford Shipping Department follows the principle, "First Come, First Served."

Cars ordered now will not be delivered until March, and deliveries will be uncertain throughout the year. If you do not want to wait for summer or autumn delivery, come in and reserve your car by signing an order today.
