Peptogenic Milk Powder

In modifying cows' milk with Peptogenic Milk Powder, the first step gives a mixture which presents proteins, carbohydrates, fat and mineral matter in definite proportions based upon comparative analyses of cows' and human milk, and adjusted to a close approximation to average, normal mothers' milk.

But Peptogenic Milk Powder introduces a principle, which, in the further preparation of the food, effects a result not obtained by any other means; it physiologically converts the proteins into the soluble and non-coagulable form characteristic of the protein bodies of mothers' milk.

Milk prepared with Peptogenic Milk Powder is thus the only artificial food for infants that corresponds with the natural food in the quality of the protein as well as quantity of each constituent; in practice it continues to prove the equivalent of mothers' milk in digestibility and in adequacy for nutrition.

Samples of Peptogenic Milk Powder with literature are sent freely to physicians upon request.
