The information in the table XXXIII "Estimate Demand for Equipment by Company" provides a figure estimated at approximately US\$ 500 million per year in mining equipment. According to the above, the figure proposed for each project already includes an adjustment that takes into account the overall project investment. But it is possible to expect that some projects will be postponed, reducing the annual figures and decreasing the demand for equipment to only US\$ 400 million. This latter figure is more consistent with the information that CARTAMIN (a database on imports of mining products and parts) records as mining imports.

In effect, CARTAMIN gathers selectively every month all the imports made by the mining companies and representatives of mining equipment in the country. The information for the last three years is listed in Annex IX.5.- "Selection of Imports for Mining 1989, 1990 and 1991", presented as follows:

- Imports by kind of equipment
- Annual imports by company
- Annual imports by country of origin

The totals of the selection of imports registered by CARTAMIN in the last three years for mining US\$ 324,6 for 1990; US\$ 515 for 1990 and 369,27 for 1991.

In observing the origin of the imports during the three years, it may be noted that the largest volume comes from the United States with figures of about US\$ 598 million, which represents 49% of the total. Other countries with significant volume are: Germany, Austria, Brazil, Canada, Finland, France, Japan, United Kingdom (England) and Sweden. Canada has a total of US\$ 42 million over the three-year period.
