Protect your trees and garden

A Fairbanks-Morse Spraying Outfit offers you the most effective and econplant and tree diseases.

The spraying machine illustrated here can be used for practically every spray use on any farm, and will quickly pay for itself in improved crops.

You can buy a Fairbanks-Morse or Gould Spraying Pump, from a brass hand pump costing a few dollars up to an engineoperated, truck-mounted outfit of the highest efficiency.

Send for free catalogue of spraying outits and appliances. It contains much valuable information, tells you what to spray, what chemical compounds to use, how to prepare them, when to do the spraying, etc. We are the largest Canadian dealers in farm engines, scales, and mechanical goods of every kind. X**************** The Fruits of Ontario

One of the most attractive etins ever got out by the Ontario Department of Agriculture is Fruit Branch and issued recently. Fruit Branca and issued recency.

This bulletin gives full information
on the growing of fruit and deals
with all of the varieties of apples. cherries, pears, plums, guince, grape, the various bush fruits and strawberries grown commonly in Ontario. An especialy attractive feature of the new bulletin are the illustrations of varieties on fine magazine Everyone interested in fruit popular should apply to the Fruit Branch for a copy of this excellent new bulletin.

Sowing Vegetable Seeds Mrs. Dell Grattan, Thunder Bay Dist. Ont.

The time for sowing vegetable seeds

out of doors varies greatly. First of all have the ground well prepared and enriched. Before starting to sow, remove all stones and rubbish pulverize the soil thoroughly Be neat in all you do.

Onions, peas, spinach, carrots, par-snips and other hardy vegetables may be planted as soon as the ground is fit. Leave cucumber, squash and corn until danger of frost is passed. the seeds in moist or freshly stirred soil. Do not plant too deeply. Sow radish in good rich soil in order to For a succeshave quick growth. sion, sow every two weeks.

Cauliflower seed is very expenso when I do not plant in the hot bed but out in the open garden I always put in with it about a cupful of turnip seed, mix them and sow. T turnip plants may be removed before they smother the cauliflower plants. Early Snowball or Dwarf Erfurt are fine for the garden. A great many cauliflower and cabbage in the hot bed. It is all right to plant a few seeds so as to have early ones to use, but as a rule the better plan is to sow them directly in rows in the garden as soon as the weather Mix cabbage seed with turnip seed the same as with cauliflower. This saves time, and I have had good heads just as quickly from plants grown from the start out in the open, although it is hardly considered possible by some. Try both ways.

Cabbage is a gross feeder, needs lots of rich manure. M the best growers apply manure broadcast. In growing early cabbage it is an excellent plan to apply a little dry hen manure around the hills when the plants are half grown. This should be put close to the plants, but scattered over a radius of a foot or more from the plants and then culti-vated into the soil. The Ear.y vated into the soil. The Early Winningstadt, Early Express and Glory of Enkhuizen are good varie-

Corn should not be planted until the soil is warm as the seed is apt to perish if the season is backward and wet. I have tried several varieties and have found the Malakoff and Squaw to be the most suitable for

D. Johnson, Forest, Ont., has been selected to head the newly formed Fruit Division at Ottawa. Johnson has had a wide experience in fruit grawing and marketing and will fill the position admirably.

Current bushes should be dusted with white hellebore or paris green; or sprayed with a decoction of hellebore, at the first appearance of current worms. Thorough cultivation should be practiced at all times.
