Minard's Liniment Cures Diphtheria

# SLOW STABVATION. The Condition of Those Afflicted

With Indigestion.

Flatulency, Sick Headache, Offensive Breath and Eructations, Irritability and a Feeling of Weight on the Stomach are Among the Symptoms Dyspepsia, or indigestion, as it is also frequently called, is one of the

most serious allments that afflicts square, and some octagoual, or eightmankind. When the stomach loses its sided. We have built two square silo craving for food, and the power to twenty feet square inside, and thirty digest it, the person so afflicted twenty leet square inside, and thirty feet high. They are built of gravel and cement, and give us good satis-faction. They are built outside of the barn, but conveniently near en-ough for us to get the silage into a feed room, where it is mixed with cut straw, cut hay and grain, once each day, enough to last twenty-four hours. both mentally and physically in condition of wretchedness. The symp-toms of the disorder are manifold, and among them may be noted a feel-ing of weight in the region of the stomach, slok headache, offensive preath, heartburn, a disagreeable gaste in the mouth, irritability of temday, enough to last twenty-four hours. In order to have good silage it is important that the corn be cut at the proper stage of ripeness, because if cut too green the silage will be very sour, and not as good food as when pro-perly ripened. Corn in this tasseling stage is said to contain 91 per cent. water; in the silking stage, 85 per cent; in the silking stage, 85 per cent.; in the glazing stage, 77 per cent.; when ripe, 72 per cent I have come to the conclusion that the best time to cut is between the glazing and the ripe stage, Between the time when the kernels begin to glaze and full ripeness, there is said to be gain of over one-eighth of dry matter, one-sixtif of fat. For a number of years we have allowed our corn to be well per, disturbed sleep, etc. The condi-tion is in fact one of slow starvation tion is in fact one of slow starvation of the blood, nerves and body, and on the first symptoms treatment through the use of Dr. Williams' Pink Pills should be sought. Mr. William Birt, a well known blacksmith at Pis-Birt, a well known blacksmith at Pis-quid, P. E. I., is one who suffered for years, and relates his experience for the benefit of similar sufferers. Mr. Birt says: "For many years I was a victim of indigestion, accompanied by nervousness, palpitation of the heart and other distressing symptoms. My appetite was irregular. and what I ate felt like a weight in my stomach; this was accompanied by a feeling of stupor or sleepiness, and yet I rarely enjoyed a night's sound sleep. When I would retire a creeping sensation would come over me, with pains and fluttering aroufid the heart, and then when I arose in the morning I moud feel as tired and fatigued as I did before I went to bed. It is need-less to say that I was continually taking medicine, and tried, I think, al-most everything recommended as a fifth of fat. For a number of years we have allowed our corn to be well on towards the ripening stage, and our silage has been excellent. Experience proves unmistakably that where corn is grown pro-perly and brought to a proper stage of maturity, there is no plant so val-uable for the bulky portion of a food ration for cattle as silage. We find so far the best mode of cutting the corn is with a hoe made for the pur-pose of cutting corn. We can cut so much lower that we believe the ex-tra amount of feed from an acre will pay for the cutting, as I believe the most everything recommended as cure for the trouble. Occasionally got temporary relief, but the trouble always came back, usually in a still more aggravated form. All this, of course, cost a great deal of money, course, cost a great deal of money, less, I was very much discouraged. One day one of my neighbors who had used Dr. Williams' Pink Pills with much benefit advised me to try them, and I decided to do so, think-ing, nevertheless, that it would he but another hopeless experiment. To my great gratification, however, I had only been using the pills a few weeks when I felt decidedly better. and things hegan to look brighter. I continued taking the pills for sev-eral months, with the result that my health was as good and my digestion The amount of feed from an acre will pay for the cutting, as I believe the bottom of the stalk is the most val-uable part. Then we cut with a large Smolley silage self-feeding cut-ter, and cut in lengths about three-fourths of an inch, as the shorter the stalks are cut the pack in the silo. In filling the silo the corn needs to be well tramped, and the butts of the stalks, the ears and the traves and top of the stalks must health was as good and my digestion better than it had ever been. One o better than it had ever been. One o the most flattering results of the treatment was my increase in weigh from 125 pounds to 155 pounds. I is more than a year now since I dis continued the use of the pills, and it bet time I have not bed the clickt is all well-mixed and solidly tramp-ed this will not occur. The only cov-ering we put on the top is to tramp thoroughly and put 25 or 30 pails of water on the top of the silage the second day after we finish fill-ing, but we continue to tramp at least every second day for say ten days, when we put on a second time 25 or 30 pails of water all over the silage. When we open to Continued the use of the parts, and in that time I have not had the slight. est return of the trouble. We always keep the pills in the house now, and my family have used them for ther allments with the same gratifying

These pills may be had from dealer in medicine or will be denier in medicine, or will be sent post paid at 50 cents a box or six boxes for \$2.50 by addressing the Dr. Wil-Jiams' Ont. Medicine Company, Brockville

### Addressed the Jury.

A man who had never seen the in-side of a court room until he was in-troduced as a witness in a case pend-ing in one of the Scottish courts, on being sworn took a position with his back to the jury and began telling the story to the Jurge. The Judge, in a bland and courte-ous manner, said:

Address yourself to the jury, sir.' "Address yourself to the jury, sir." The man made a short pause, but, notwithstanding what had been said to him, continued his narrative. The Judge was then more explicit, and said to him: "Speak to the jury, sir; the men sitting behind you on the benches." The witness at once turned around, and making an arkumard how cold manured the corn crop seldom fails. 6. Experiments made at the Wis-consin Experiment Station with en-silage and fodder corn upon milch

Fodder Corn, and How it in the Agricultural Gazette. Should be Treated. They average between 1,200 and 1,300 pounds in weight and the cost of the food dally for each steer is about five and one-half cents. There is no other food of the same value that would give the same results. I feel confident that in ten years from now it will be the exception on farms in Ontario not to find a silo. The silo may be built in different forms, and of any material that will combine strength with durability, and as nearly air tight as it is possible to make it. Some are built round, some

well mixed wherever there is a quantity of leaves and tops of the stalks without any of the ears and stalks, there will in all likelihood be mouldy spots, whereas if it is all well mixed and solidly tramp-

A.-We feed three times dally. Q.-How about feeding the bacon hog? A.-There was much discussion at Institute meetings this year about feeding the bacon hog. The general be-lief is that it will not pay to feed all grain. The feeling with many is, and I share that feeling, that mangold-wurtzels are a good and healthy food. It is a long way cheaper than feeding all grain. The first report of the Sa-perintendent of Farmers' Institutes shows on page 22 that one pound of grain is equal to eight pounds of roots, and it is stated at Copenhagen. where mangolds were feed raw, and even when one-fourth of the daily feed was given in the form of roots, that no injurious effects were ob-served in the quality of the pork. Taking the average yield of man-golds, as given in the last report of the Farm at Guelph, and the average yield of peas, barley and oats-say it takes eight pounds of grain to make one pound of pork, and one pound of grain is equal to eight pounds of roots one acre of mangolds will give 1,143 pounds of pork, one acre of peas will give 375 pounds of gork, one acre of barley will give 600 pounds of pork. and one acre of oats will give 510 pounds of pork. over the silage. When we open to begin to feed, we find three or four Now, as to the benefits of silage over fodder corn: 1. The silo renders the corn more easily digested.
2. I can have succulent food both summer and winter.
3. I can keep a greater quantity of cattle on the same number of acres, as there is no waste, the silage being eaten up clean.
4. Animals are more healthy on silage than on dry food.
5. If land is well drained and well manured the corn cron seldom fails.

They Speak for Themselves.

Making Land From the Sea

PICTON, Feb. 17.—This is to certify that I have used Polson's Nerviline for rhoumatism, and have found it a valuable remedy for all internal pain, and would greatly recommend it to the public.—N. T. TXINGELEY.

## CITY MAY BUY COAL MINES English Municipality May Solve the

Cheap Fuel Problem. In 1903 Manchester citizens may work a colliery. Why not? If the victim of inexorable demand notes may be a wash-house proprietor, own a park, run his own tramcars. supply himself with water and draw illumination from his own mains-and all at a profit-surely he may go deeper afield and annex the bow-els of the earth. Thus argued a member of the Manchester corporation gas com-mittee. Taking his cue from a wise Glaswegian he has bidden his col-leagues to consider the question for a month. He has drawn a veil of anonimity around his plan, and un-til the officials have had time to prepare it he means to keep it as Cheap Fuel Problem.

anonimity around his plan, and un-til the officials have had time to prepare it he means to keep it as dark as a coal mine. This year the Manchester city gas works will use 500,000 tons of coal and cannel. Already the increased cost has sent gas up 3 pence per 1,000 cubic feet. Of the extra 500,-000 times 5 shillings, say 60 per cent. is clear profit to the mine owner. But coal is dearer, as gas is costiler, and the contribution of £50,000 a year to the city rates out of gas gain is in jeopardy, al! which need not have been if the Manchester ratepayer could have been digging his own coal as well as making his own light. Those who are of the corporation predict that the project will come to fruition and special bargains in coal mines are being looked for. The chief rock of offense will be that colliery exploitation is too hazard ous and speculative a business for the public to touch. To which the answer is that when you buy coal you pay for all mining risks, and that citizens pits producing 10,000 tons a week would provide their own insurance.-London Mail.

## Poor Lo's Religious System.

The highest village in Europe is Avers Platz, in Switzerland (7,500) So benign was the religious system So benign was the religious system of the Indian that each department of the animal kingdom was provided with a little divinity to look after its affairs. Thus the Spirit of the Great Swan looked after all swans, the Spirit of the Great Turtle controlled all turtledom, and so on through the list, every kind of an animal having its own protecting spirit to guard its interests and punish its enemies. These divinities—who were under the control of the Great Spirit—felt a great in-terest in the human race, and any one of them might become the protecting genius of any particular man. Avers Flatz, in Switzerland (7,500); the highest inhabited point in Europe is the Hospice of St. Bernard, in Swit-zerland (8,200 feet). In Colorado the mining town of Lendville, with 15,000 inhabitants, is over 14,200 feet above see lovel other with 15,000 sea level; other mining camps are still higher, and some gold and silver mines are worked at an altitude of over 12, 000 feet. Has convinced many that to use any of the substitutes offered for the only sure-pop and philoss core cure is attended with danger.
