A CENTURY'S ENDING

HISTORICAL EVENTS OF THE CLOSING HUNDRED YEARS.

The Nineteenth Century will be a Memorial One in History—had Great Wars and Revolutions—Marvellous Progress in Science—Terrible Conflicts Between Nations—Splendid Achievements in Inventions.

An eventful century truly has been this Nineteenth Century of the Christian era, now almost at its close. From whatever standpoint it is regarded its history is marvelous. In the knowledge we have gained during its progress, of our own globe, it stands unparalleled. There has been wonderful progress also in the science of education and in the adaptation of natural forces to human purposes. Political and territorial changes, too, have made this a very different world from that of 1800.

It is not possible in small space, to even mention the events which make the century memorable, but it may be interesting to recall a hundred, which, if not the most important, are those that have had the greatest influence in shaping and developing the conditions of the nations.

Wars and Revolutions.

Why He Was Pleased.

When the children attending a certain school reassembled after the summer holidays one of the teachers asked her little pupils if they were pleased to get back to school.

"Yes," was the almost unanimous response.

"Why are you pleased to get back to school?"

"Because," answered the bright youth, "I gets a bit o' rest at school. In the 'olidays I just runs herrins all day!"

Some gave one reason, some another, but it was reserved to a little tot at the bottom of the class to startle the teacher.

"And now, Johnny," said the lady, kindly, lifting the youngster onto her knees, "why is Johnny pleased?"

"Must I tell the troof?" asked Johnny.

"Of course, Johnny. Now, why are you pleased?"

"Because I ain't, so there!" replied the incorrigible.—London Tit-Bits.

Motor Trip Across the Alps.

A German lieutenant has just crossed the Alps in an automobile, the route followed being by way of Frankfurt, Munich, the Brenner and Innsbruck.

The whole excursion, which extended over 1,250 miles, was performed in 99 hours driving—a record of over 12 miles an hour.

Strange Reptiles.

A western writer thinks one of the severest tests ever put upon his ribs was endured at a London dinner table.

He was seated next a lovely, rosy cheeked, gray eyed English girl who displayed a most absorbing and flattering interest in his native land. She appeared to have imbibed some extraordinary ideas about the perils to be encountered in the newly settled regions of the United States and tried not to look incredulous when she was assured that things were really not as bad as she imagined.

"I'm sure it's pleasant to be told there are not rattlesnakes in all the gardens," she said, with a pretty smile, "but my sister wrote not long ago that he had seen over 400 wigwags in one little village. Perhaps," she added as her companion made no immediate reply, "the wigwags are not as venomous as rattlesnakes, are they?"

The Compass.

One of the greatest Chinese discoveries was a kind of iron ore which attracts iron—the magnet. Then they found that a bar of magnetic iron set free always points to the north. That is the mariner's compass, without which travel at sea would be almost impossible. They were the first people to dig canals and so find a cheaper way of carrying goods than even our railway. In building they discovered the greatest of all inventions—the arch.

Preferred to Keep Going.

"Miss Porcupine," said the seashore gallant at the hop, "will you be my partner for the next set?"

"Oh, my," she exclaimed, "don't you dance? I'd rather do that than set."
