Top Working Fruit Trees

R. M. Winslow, Provincial Horticalturist, Victoria, B.C.

The fruit growers of the Okanagan Valley have shown a great increase of interest in making remunerative unsuitable varieties of trees by working them over to the best commercial kinds. Inquiries and requests to the Horticultural Branch of the Depart ment of Agriculture have been far more numerous than in any previous year.

While top-working fruit trees, especially apples, is often justified by the increased returns after the new top is well established, there are certain conditions under which it is not advisable. I refer particu-larly to the top-working of black-hearted trees, or those which have been badly af-fected by fire blight. The wood of a black-heart tree is brittle, and much of it is dead; decay starts very readily in the cuts made for grafting, and the scions either fail to grow, or if they grow, make a poor union, and eventually break off.

The appearance of a tree severely cut back in the effort to control an attack of blight, naturally suggests top-working to a blight resistant kind. If blight were quiescent or absent from the district, topworking might be feasible, but when blight is active, the inevitable crop of water sprouts furnish the best possible condi-tions for blight, and effort to save the blighted stock on which to build a new tree is likely to meet entirely with failure.

Aside from blight or black hearted trees there is a large number of sound, healthy and vigorous trees, of non-remunerative or non-productive varieties; these may be grafted over to the better commercial kinds; in fact, i is highly desirable that they should be so treated.

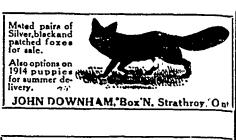

Items of Interest

Sunscald is found almost entirely in trees having an open habit of growth or where they are headed very high and prun-ed out severely in the centre.—S. E. Todd, Lake Huron District, Ont.

The use of jced cars for the carriage of fruit is increasing year by year and fruit growers are learning that the question of temperature in transit is of as much im-portance as the length of time occupied in carrying the fruit from one place to an-other.-J. A. Ruddick, Dairy Cold Storage Commissioner.

The cooperative purchasing of supplies has built up in our vegetable growers' as-sociation a spirit of brotherly love and mutual confidence that has been of untold benefit to us. Our members have increas ed, our finances have grown (until one year we paid out over one hundred and fifty dollars up proceeding and end will had fifty dollars in prize money), and still had a nice surplus at the end of the year -W. J. Kerr, Ottawa, Ont.

Since the creation of The United Fruit Companies of Nova Scotia, Limited, the fruit industry of Nova Scotia appears to have taken a new lease of life. The company has established a department in The Reg-ister, of Berwick, N.S., which is published weekly, and which keeps the fruit growers of the Annapolis Valley fully posted in regard to important matters relating to the fruit industry. This is creating greater confidence among the growers and assisting in bringing about reforms and improvements more rapidly than would otherwise be possible.

If you buy a cheaper Arsenate of Lead "to save money" don't buy any at all and you will save all the money.

Neutral Arsenate of Lead

is not made to sell at a low price, but is produced by a process, that gives it qualities which makes it more economical and efficient than the Arsenates selling for less money.
