### ANALYSIS OF RADNOR SPRING WATER.

By **J. T. DONALD, M.A.**, *Professor of Chemistry, Medical Faculty, Bishop's College, Analytical and Consulting Chemist and Assayer.*

MONTREAL, June 14, 1894.

"I hereby certify that I have analyzed the sample of Radnor Water received from the Canada Iron Furnace Co., Limited, and find the following results in 10,000 parts of water:

Chloride of Sodium .....	14.354	Bicarbonate of Sodium ..	1.167
Chloride of Potassium ....	.211	Carbonate of Lime .....	2.940
Sulphate of Sodium .....	.210	Carbonate of Iron .....	Traces
Sulphate of Magnesia ....	1.262	Silica .....	.145
Bromide of Sodium .....	.080		

In 10,000 parts of water.. 20.899

"The analysis shows that Radnor Water is of the same class as Appolinaris and German Seltzer. Like those, it contains no excess of Sodium Chloride and Carbonate of Lime; and, again, like these, it contains the valuable ingredients in such proportions that its use as a table water overcomes constipation and acidity of the stomach in a gentle and pleasant manner. And it must not be forgotten that the valuable Sodium Bromide, which is entirely wanting in the German waters named, exist in appreciable quantity in the Radnor Water, making it a most desirable tonic."
