-AP.S. Glassco, Esq.
7. Social Research and Statistics.

Dr. Chandler gives a course on Child HyEiene to the Graduate Nurses which might sulfice ior our students.

The Household Science Department at Macdonald College supply No. 5. Home Economics.

Courses No. 1.2, 4, 6, nd 7, a Director on Iull time will have to sive as long as funds are not available and better qualiilied lecturers ere not available.

I have made no provision for Extension Courses which can be made to linance themselves.

I have made no allowance for a course in Rural Sociology as I heve not recelved eny word. Irom the Theological Colleges to the offert that they are not satisiled with the colarse given uy the Rev. Mr. Diokio.

A special course on city problems with visits of inspection lor the Theological students only would be given by the Dizector.

In recard to the Secretaryship of the Department, a change might bo possible if convelnient to the school of Graduate Nurses by which the Sohool and the Department would share the services of i full time Secretsry-stonographer.

At prosent, Miss Lalleur is obliged to be in the ofilce all the time to attend to the giving out oi bouks and is unable to give any attontion to the students' 1101d ork supervision. Miss Lalleux's velue to the Department rostis much more in wer knowledge of soleal work. local conditions and agencies than in her services as a typist or a Reading Room attentant. A man Director will ind it much more suitable to nave a woman to supervise the field work and accompany students on visits of inspection and to do this Miss Lafleur mast not be tied to the Residinis Room all dyy.

It should be possible to run the Departm nt at the cost eiven for the ne three years provided that there is nat a large increase in the number of full time students, such an increisc, however, would mean an inorease in fees hich would cover the additional expense.

Yours traly.
